Conditions for Admission:

(a) Candidates for admission to the first semester of the 8 semester B.Tech. degree programme should be required to have passed:

The Higher Secondary Examination of the (10+2) curriculum (Academic Stream) prescribed by the different State Boards/ Central Boards or any other examination equivalent thereto with minimum of 45% marks (40% marks in case of candidates belonging to reserved category) in aggregate of subjects – Mathematics, Physics and any one of the following optional subjects: Chemistry / Biotechnology/ Computer Science / IT and equivalent/ Electronics/ Biology (Botany & Zoology) or Passed D.Voc Stream in the same or allied sector or an Examination of any University or Authority recognized by the Executive Council of the Pondicherry University as equivalent thereto.

b) Candidates for admission through Lateral entry into second year (third semester) of the 8 semester B.Tech.degree programme should be required to have passed :

Passed Minimum THREE years / TWO years (Lateral Entry) Diploma examination with at least 45% marks (40% marks in case of candidates belonging to reserved category) in ANY branch of Engineering and Technology.

OR

Passed B.Sc. Degree from a recognized University as defined by UGC, with at least 45% marks (40% marks in case of candidates belonging to reserved category) and passed 10+2 examination with Mathematics as a subject.

OR

Passed D.Voc. Stream in the same or allied sector.

(The Universities/colleges will offer suitable bridge courses such as Mathematics, Physics, Engineering drawing, etc., for the students coming from diverse backgrounds to achieve desired learning outcomes of the programme)

2. AgeLimit:

As per applicable AICTE norms.

3. Duration of Programme:

The Bachelor of Technology degree programme shall extend over a period of 8 semesters spread over 4

academic years – two semesters constituting one academic year. The duration of each semester shall normally be 15 weeks excluding examinations.

4. Program Structure

The medium of instruction is English.

A student admitted to the B.Tech. programme in a particular branch of engineering will earn the degree in that branch by fulfilling all the requirements prescribed in the regulations during the course of study.

The student is also permitted to opt for earning an **Honors degree in the same discipline of Engineering or a Minor degree** in another discipline of engineering in addition to the degree in his own discipline of engineering. The student will be allowed to exercise this option at the end of first year based on his academic performance in the first year. The students admitted through lateral entry can exercise this option at the end of third semester, based on the GPA scored in the third semester examination.

The student opting for B.Tech. degree with **Honors or B.Tech. degree with Minor** is required to earn additional 20 credits starting from the third semester. The students admitted in the second year through lateral entry and opting for Honors / Minor degree will earn the additional 20 credits starting from the fourth semester.

5. Eligibility for the award of B.Tech. Degree:

No candidate shall be eligible for the award of the degree of Bachelor of Technology, unless he/she has undergone the course for a period of 8 semesters (4 academic years) / 6 semesters (3 academic years for Lateral Entry candidates) in the Faculty of Engineering and has passed the prescribed examinations in all the semesters. Details regarding the possible exit for a B.Tech. student – in line with one of the goals of the National Education Policy (NEP) 2020 are provided in section 13.

6. Branches of Study:

Branch I - Civil Engineering

Branch II– Mechanical Engineering

Branch III - Electronics & Communication Engineering

BranchIV-ComputerScience&Engineering

Branch V– Electrical & Electronics Engineering

Branch VI – Chemical Engineering

Branch VII - Electronics & Instrumentation Engineering

Branch VIII –Information Technology

Branch IX - Instrumentation & Control Engineering

Branch X– Biomedical Engineering

Branch XI - Robotics and Automation

Branch XII – Food Technology

Branch XIII- CSE (Internet of Things & Cyber security including Block chain Technology)

Branch XIV – ArtificialIntelligence and Machine Learning

Branch XV - ArtificialIntelligence and Data Science

or any other branch of study as and when offered. The branch allocation shall be ordinarily done at the time of admission of the candidate to the first semester.

7. Course Structure and Subjects of Study:

Definition of Credit:

1 Hour Lecture (L) per week	1 Credit
1 Hour Tutorial (T) per week	1 Credit
2 Hours Practical (P) per week	1 Credit

Range of Credits: The total credits of all the branches for the four-year B. Tech. degree Programme shall be in the range of 160 to 172 (Minor variation is allowed as per AICTE guidelines). “Minor Degree or Honors will cumulatively require additional 20 credits in the specified area in addition to the credits essential for obtaining the Under Graduate Degree in Major Discipline”.

The subjects of study shall include theory, practical courses and project work/internships as given in the curriculum and shall be in accordance with the prescribed syllabus.

The curriculum of every programme will have courses that are categorized as follows:

- (i) Humanities, Social Sciences and Management Courses (HSM)
- (ii) Basic Science Courses (BSC)
- (iii) Engineering Science Courses (ESC)
- (iv) Professional Core Courses (PCC)
- (v) Professional Elective Courses (PEC)
- (vi) Open Elective Courses (OEC)
- (vii) Professional Activity Courses (PAC)
- (viii) Mandatory non-Credit Courses (MCC)

Each course will have either one or more of three components namely Lecture (L), Tutorial (T) and Practice (P). Each course is assigned credits as detailed below:

- (i) Theory courses will carry either 3 or 4 credits - 3 credits for courses with 3 lecture periods per week and 4 credits for courses with 3 lecture periods and 1 tutorial period per week.
- (ii) All Elective courses including online courses will carry maximum 3 credits. The student can earn the credits towards the Open Elective Courses (OEC) by completing the online courses offered in NPTEL anytime between third and seventh semester on prior approval of the courses by the Academic Courses Committee of the Institute. Credits earned through the NPTEL courses will be confined to 2 or 3 credits and subject to a maximum of 9 credits during the entire programme of study.
- (iii) Practical courses will normally carry either 1 or 1.5 credits – 1.5 credits for courses with 3 practice periods per week and 1 credit for courses with 2 practice periods per week.
- (iv) Out of total credits required for successful completion of the degree, 14 to 22 credits can be assigned for Project work and/or Internship.
- (v) Mandatory non-credit courses carry zero credit.

8. Examinations:

The theory and practical examinations shall comprise continuous internal assessment throughout the semester in all subjects as well as university examinations conducted by Pondicherry University at the end of the semester (November / December or April /May).

8.1. Evaluation Scheme

All Credit courses are evaluated for 100 marks comprising of Internal assessment and end-semester exam.

For Theory Course, the weightage of internal assessment is 40% and end semester examination is 60%

For Practical course, the weightage of internal assessment is 60% and end semester examination is 40%

For Project, the weightage of internal assessment is 60% and end semester examination is 40%

8.2. Internal Assessment (Theory)

Total Internal Assessment mark for a theory course is 40 marks. The breakup is as follows:

Criteria	Maximum Marks
a) Internal Assessment Tests	30
b) Percentage of Attendance	5
c) Assignment(s)	5
Total	40

Marks for Attendance is as follows:

Below 75%	0
75% - 80%	1
81% - 85%	2
86% - 90%	3
91% - 95%	4
96% - 100%	5

The Principal of the College/Institute schedules the Internal Assessment tests for all courses. All faculty members are expected to conduct this Internal Assessment tests for 1.30 hours duration and evaluate and required to upload the marks to the Controller of Examinations of University. Colleges are also requested to preserve the answer sheets of Internal Assessment tests until declaration of results by the University.

8.3. Internal Assessment (Practicals)

Faculty in-charge of Lab courses shall evaluate the practical course for 60 marks. The break up is as follows:

Criteria	Maximum Marks
a) Laboratory exercises and Record	30
c) Mid Semester exam (Average of 2 exams)	15
c) Internal Viva voce	5
d) Percentage of Attendance	10
Total	60

Marks for Attendance is as follows:

Below 75%	0
75% - 80%	2
81% - 85%	4
86% - 90%	6

91% - 95%	8
96% - 100%	10

8.4. Internal Assessment (Project)

The Project work carried out in the eighth semester shall be assessed as follows:

Criteria	Marks
a) Continuous assessment (Guide)	25
b) Project Evaluation Committee	35
Total	60

8.5 Requirement for appearing for University Examination

The Controller of Examinations (COE) of Pondicherry University schedules the End-Semester exams for all theory and practical courses based on the University academic calendar.

A detailed Exam Time Table shall be circulated to all Colleges at least 15 days before the start of exams. Question Papers shall be set externally based on BOS approved syllabus.

A candidate shall be permitted to appear for university examinations at the end of any semester only if:

i) He / She secures not less than 75% overall attendance arrived at by taking into account the total number of periods in all subjects put together offered by the institution for the semester under consideration.

(Candidates who secure overall attendance greater than 60% and less than 75% have to pay a condonation fee as prescribed by University along with a medical certificate obtained from a medical officer not below the rank of Assistant Director)

ii) He / She earns a progress certificate from the Head of the institution for having satisfactorily completed the course of study in all the subjects pertaining to that semester

iii) His / Her conduct is found to be satisfactory as certified by the Head of the institution.

A candidate who has satisfied the requirement (i) to (iii) shall be deemed to have satisfied the course requirements for the semester.

8.6 End Semester Exam Evaluation Pattern

<u>Course</u>	Maximum marks
<u>Theory course</u> (Sec A, Sec B and Sec C) Questions from all units of syllabus	60 marks
<u>Practical course</u> (Based on Lab exercises/Record/ Practicals /Viva)	40 marks
<u>Internship /Project Work</u> (Based on Seminar/Project Work/Project report/Presentation and viva voce)	40 marks

8.7 Consolidation of Marks and Passing Minimum

The Controller of Examinations of the University consolidates the Internal Assessment marks uploaded by the Colleges and marks secured by students in the end-semester examination.

A student shall be declared to have passed the examination in a subject of study only if he/she secures not less than **40% marks individually both in internal assessment and end-semester examination or an aggregate of 40%.**

A candidate who has been declared “Fail” in a particular subject may reappear for that subject during the subsequent semesters and secure pass marks. However, there is a provision for revaluation of failed or passed subjects provided he/she fulfills the following norms for revaluation.

- Applications for revaluation should be filed within 15 days from the date of declaration of results or 7 days from the date of receipt of grade sheet whichever is earlier.
- The candidate should have attended all the internal assessments conducted by the college as well as all the end semester examinations conducted by the University.
- If a candidate has failed in more than two papers in the end semester examinations, his/her representation for revaluation will not be considered.
- The request for revaluation must be made in the prescribed format duly recommended by the Head of the Institution along with the revaluation fee prescribed by the University.

“A student shall be declared to have passed the examination in a subject of study only if he/she secures not less than **40% marks individually both in internal assessment and end-semester examination, or an aggregate of 40%.**

8.8. Arrear Exams

A student who failed to secure 40% marks in aggregate is declared as “Fail” and he is eligible to take up a supplementary examination by registering to the said course in the following semester. All other candidates who failed due to shortage of attendance and those seeking to improve the grade shall repeat the course.

8.9. Letter Grades and Calculation of CGPA

Total Marks Secured by a student in each course shall be converted into a letter grade. The following Table shows the seven letter grades and corresponding meaning and the grade points for the calculation of Cumulative Grade Point Average (CGPA).

Each course (Theory/Practical) is to be assigned 100 marks, irrespective of the number of credits, and the mapping of marks to grades may be done as per the following table:

Range of Marks	Assigned Grade	Grade Points
91-100	A ⁺	10
81-90	A	9
71-80	B ⁺	8
61-70	B	7
51-60	C ⁺	6
46-50	C	5
40-45	D	4
<40	F	0
Not Applicable	F ^R (Fail due to shortage of attendance and therefore, to repeat the course)	0

Note: -F- denotes failure in the course; - F^R - denotes absent / detained as per AICTE norms.

After the results are declared, grade sheets will be issued to the students. The grade sheets will contain the following details:

- The college in which the candidate has studied.

- b) The list of courses enrolled during the semester and the grades scored.
- c) The Grade Point Average (GPA) for the semester and the Cumulative Grade Point Average (CGPA) of all enrolled subjects from first semester onwards.
- d) GPA is the ratio of sum of the products of the number of credits (C) of courses registered and the corresponding Grades Points (GP) scored in those courses, taken for all the courses and sum of the number of credits of all the courses.

$$\text{GPA} = \sum(C \times \text{GP}) / \sum C$$

CGPA will be calculated in a similar manner, considering all the courses enrolled from first semester. F^R grades are to be excluded for calculating GPA and CGPA.

- e) The conversion of CGPA into percentage marks is as follows

$$\% \text{ Mark} = (\text{CGPA} - 0.5) \times 10$$

9. Procedure for completing the B.Tech. course:

A candidate can join/rejoin the course of study of any semester only at the time of its normal commencement and only if he/she has satisfied the course requirements for the previous semester and further has registered for the university examinations of the previous semester in all the subjects as well as all arrear subjects if any.

However, the entire B.Tech. course should be completed within 7 years (14 semesters) and six years (12 semesters) for students admitted under lateral entry.

10. Award of Class and Rank in B.Tech. degree:

- i) A candidate who satisfies the course requirements for all semesters and who passes all the examinations prescribed for all the eight semesters (six semesters for lateral entry candidates) within a maximum period of 7 years (6 years for lateral entry candidates) reckoned from the commencement of the first semester to which the candidate was admitted shall be declared to have qualified for the award of B.Tech. degree.
- ii) A candidate who qualifies for the award of the B.Tech. degree passing in all subjects pertaining to the semesters 3 to 8 in his/her first appearance within 6 consecutive semesters (3 academic years) and in addition secures a CGPA of 8.50 and above for the semesters 3 to 8 shall be declared to have passed the examination in **FIRST CLASS** with **DISTINCTION**.
- iii) A candidate who qualifies for the award of the B.Tech. degree by passing in all subjects relating to semesters 3 to 8 within a maximum period of eight semesters after his/her commencement of study in the third semester and in addition secures CGPA not less than 6.5 shall be declared to have passed the examination in **FIRST CLASS**.
- iv) All other candidates who qualify for the award of B.Tech. degree shall be declared to have passed the examination in **SECOND CLASS**.

v) For the Award of University ranks and Gold Medal for each branch of study, the CGPA secured from the 1st to 8th semester alone should be considered and it is mandatory that the candidate should have passed all the subjects from the 1st to 8th semester in the first attempt. Rank certificates would be issued to the first ten candidates in each branch of study.

11. Provisions for Honors/Minor degree along with B.Tech. degree:

1. B.Tech. with Honors Degree in the same Engineering discipline

- a. The student shall be given an option to earn a Honors degree in the same discipline of engineering at the end of first year based on his academic performance in the first year.
- b. A student is eligible to exercise this option if he has passed all the subjects offered in the first year in the first attempt itself and has earned a CGPA of not less than 7.5.
- c. Honors degree in a particular discipline of engineering shall be offered for a batch of students if and only if a minimum of 5 eligible students opt for it.
- d. The student is required to earn an additional 20 credits (over and above the prescribed maximum credits in the curriculum) starting from the third semester onwards to become eligible for the award of Honors degree. 20 credits shall be earned by the student by completing 5 additional courses of 4 credits each, one in each of the 5 semesters starting from the third to seventh semester. The syllabus of these 5 courses are framed so as to cover advanced topics in that discipline of engineering.
- e. The students admitted in the second year through Lateral Entry Scheme will also be given a chance to opt for Honors degree. Eligibility to avail this option is CGPA of 7.5 and above with no arrears in the third Semester. The student will join the existing batch of students in the fourth semester and earn 16 credits by registering the prescribed courses offered up to the seventh semester. The respective BoS will decide on a suitable course in lieu of the course offered in the third semester to facilitate the student to earn the remaining 4 credits.
- f. A student is eligible to get the Honors degree only on completing the programme in 'First Class with Distinction' class.
- g. A student can exercise the option to withdraw from the Honors degree at any time after entry.
- h. Details about the courses completed and credits earned for Honors degree will appear only in the 'Eighth Semester Grade Sheet' and 'Consolidated Grade Sheet'. These details will be listed under the heading 'Credits Earned for Honors degree'. In the case of students who have either withdrawn from Honors degree or become ineligible for Honors degree by not securing 'First Class with Distinction', the credits earned for the courses registered and successfully completed for Honors degree will be listed under the heading 'Additional Credits Earned'.

- i. The CGPA will be calculated for all the courses credited by the students inclusive of major and honors courses
- j. Nomenclature of Honors Degree is 'B.Tech.(Honors) in XXX ', where XXX is Discipline in which the student has enrolled.

2. B.Tech. with Minor degree in another Engineering discipline

- a) The student shall be given an option to earn a minor degree in another discipline of engineering of his choice at the end of first year based on his academic performance in the first year.
- b) A student is eligible to exercise this option if he has passed all the subjects offered in the first year in the first attempt itself and has earned a CGPA of not less than 7.5.
- c) Minor degree in a particular discipline of engineering shall be offered for a batch of students if and only if a minimum of 5 eligible students opt for it.
- d) The student is required to earn an additional 20 credits (over and above the prescribed maximum credits in the curriculum) starting from the third semester onwards to become eligible for the award of minor degree. 20 credits shall be earned by the student by completing 5 additional courses of 4 credits each, one in each of the 5 semesters starting from the third to seventh semester. The curricular content of these 5 courses are framed in such a way that that these courses will essentially cover the core minimum knowledge required to be fulfilled for award of degree in the discipline of engineering in which the student chooses to earn the minor degree.
- e) The students admitted in the second year through Lateral Entry Scheme will also be given a chance to opt for Minor degree. Students with a CGPA of 7.5 and with no arrears in the third semester are eligible to avail this option. The student will join the existing batch of students in the fourth semester and earn 16 credits by registering for prescribed courses offered up to seventh semester. The respective BoS will decide on a suitable course in lieu of the course offered in the third semester to facilitate the student to earn the remaining 4 credits.
- f) A student can exercise the option to withdraw from the Minor degree at any time after entry.
- g) Details about the courses completed and credits earned for Minor degree will appear only in the 'Eighth Semester Grade Sheet' and 'Consolidated Grade Sheet'. These details will be listed under the heading 'Credits Earned for Minor degree'. In the case of students who have withdrawn from Minor degree, the credits earned for the courses registered and successfully completed for Minor degree will be listed under the heading 'Additional Credits Earned'.
- h) Nomenclature of Minor Degree is 'B.Tech. in XXX with Minor in YYY', where XXX is Discipline in which the student is enrolled and YYY is Discipline which the student has opted as Minor.

- i) The CGPA will be calculated for all the courses credited by the students inclusive of major and minor courses.

12. Provision for withdrawal:

Based on the recommendation of the Head of the Institution, a candidate with valid reasons may be granted permission by the University to withdraw from writing the entire semester examination as one Unit. The withdrawal application shall be valid only if it is made earlier than the commencement of the last theory examination pertaining to that semester. Withdrawal shall be permitted only once during the entire course. A candidate who has withdrawn is also eligible to be awarded DISTINCTION provided he/she satisfies the other necessary conditions. But, they are not eligible to be awarded a rank.

13. Provisions for exit in B.Tech. course:

(For courses where AICTE specifies exit in the model curriculum)

The curriculum and the syllabus for all B.Tech programmes have been planned in compliance with the NEP guidelines proposed by AICTE. Accordingly, students joining B.Tech programmes shall have all benefits NEP offers in terms of exercising exit option during the course of study. Every B.Tech programme governed under this school board shall adopt the NEP guidelines, as and when proposed/amended by AICTE, and the following scheme will be applied for all such B.Tech programmes specified by AICTE.

NEP 2020 suggests that a student can exercise exits at multiple stages of the course of study. As per AICTE norms, a student can have two possible exits before the completion of the Full Engineering degree and may get a UG Diploma /Certificate or B.Sc. degree in the relevant discipline if he/she fulfils the following conditions: (Subject to change as per AICTE guidelines)

1. UG Diploma/Certificate in the relevant branch of study

A student should be able to get a UG Diploma if he/she completes:

- a. 50% of the credits for B.Tech. (80-85 credits)
- b. 50% of the program core courses
- c. Students exiting the program after earning 50% credit requirements will be awarded a UG Diploma provided they secure an additional 6 credits through summer internships/apprenticeship of 2 months duration.
- d. Students admitted through lateral entry cannot exercise the exit option as he will not be able to meet out the 50% Credits for B.Tech. degree.

2 B.Sc. in the relevant branch of study

A student should be able to get a B.Sc. degree if he/she completes:

- (i) 75% of the credits for B.Tech. (minimum 120 credits) and at least 3years in the program.

- ii) 100% of the core program courses.
- iii) Students exiting the program after earning 75% credit requirements will be awarded a B.Sc. provided they secure an additional 6 credits through 2 summer internships/apprenticeship for 2 months each.
- iv) With B.Sc. degree, the student is eligible for entry into programs which take B.Sc. degree as eligibility criteria.

2.1 Award of Class in B.Sc. degree

A candidate who satisfies the course requirements for all semesters and who passes all the examinations within a maximum period of 6 years (5 years for lateral entry candidates) reckoned from the commencement of the first semester to which the candidate was admitted shall be declared to have qualified for the award of B.Sc. degree in the relevant discipline.

i) A candidate who qualifies for the award of the B.Sc. degree passing in all subjects pertaining to semesters the 3 to 6 in his/her first appearance within 4 consecutive semesters (2 academic years) and in addition secures a CGPA of 8.50 and above for the semesters 3 to 6 shall be declared to have passed the examination in **FIRST CLASS with DISTINCTION**.

ii) A candidate who qualifies for the award of the B.Sc. degree by passing in all subjects relating to semesters 3 to 6 within a maximum period of six semesters after his/her commencement of study in the third semester and in addition secures CGPA not less than 6.5 shall declared to have passed the examination in **FIRST CLASS**.

iii) All other candidates who qualify for the award of B.Sc. degree shall be declared to have passed the examination in **SECOND CLASS**.

2. Re-entry to complete the program

A student exiting with B.Sc. should be entitled to re-enrol in the programme of the same Engineering discipline. Only students admitted to the B.Tech. programme and exercised an exit option are eligible for readmission to the B.Tech. programme under the same discipline. It is suggested that all credits will be transferred, if the student enrolls back within a limited period (3 years) of exiting. In case a student enrolls after that, then the decision on the transfer of credits should be based on the changes in the curriculum the student studied. A candidate after exit may rejoin the course only at the commencement of the semester at which he/she discontinued, provided he/she pays the prescribed fees to the University. The total period of completion of the B.Tech. course reckoned from the commencement of the first semester to which the candidate was admitted shall not in any case exceed 7 years, including of the period of discontinuance.

3. Completion Possibility in other Institutions

A student can earn B.Sc. in one institution (Engineering) and complete the degree program in another institution (same Engineering discipline only).

(Note: If these exit options are accepted for multiple B.Tech. programs, it is suggested that AICTE actively communicate these to the industry and other bodies, so they recognize these and accept them as bona-fide credentials for the purposes of recruitment and/or eligibility for admission to programs, appearing in competitive examinations, etc.)

14. Revision of Regulations and Curriculum:

The University may from time-to-time revise, amend or change the regulations of curriculum and syllabus as and when found necessary.

GENERAL COURSE STRUCTURE & CREDIT DISTRIBUTION

GENERAL COURSE STRUCTURE & THEME

A. Definition of Credit:

1 Hr. Lecture (L)	1 Credit
1 Hr. Tutorial (T)	1 Credit
2 Hours Practical (P)	1 Credit

B. Range of Credits: In the light of the fact that a typical Model Four-year Under Graduate degree program in Engineering has about 160 credits, the total number of credits proposed for the four-year B. Tech in Electrical and Electronics Engineering is kept as 160.

C. Structure of UG Program in EEE: The structure of UG program in Electrical and Electronics Engineering shall have essentially the following categories of courses with the breakup of credits as given:

S. No	Category	Credit Breakup	Percentage of Credit Breakup
1	Humanities and Social Sciences including Management courses	15	9%
2	Basic Science courses	23	15%
3	Engineering Science courses including workshop, drawing, basics of electronics/ electrical/ mechanical/ computer etc.	14	9%
4	Professional core courses	68	42%
5	Professional Elective courses relevant to chosen specialization/branch	12	7%
6	Open subjects – Electives from other technical and /or emerging subjects	09	6%
7	Project work	19	12%
8	Mandatory Courses [Environmental Sciences, Induction Program, Indian Constitution, Essence of Indian Knowledge Tradition]	(non-credit)	-
	Total	160	100%

D. Course code and definition:

Course code	Definitions
L	Lecture
T	Tutorial
P	Practical
C	Credits
BSC	Basic Science Courses
ESC	Engineering Science Courses
HSMC	Humanities and Social Sciences including Management courses

PCC	Professional core courses
PEC	Professional Elective courses
OEC	Open Elective courses
MC	Mandatory courses

- **Course level coding scheme:** Three-digit number (odd numbers are for the odd semester courses and even numbers are for even semester courses) used as suffix with the Course Code for identifying the level of the course. Digit at hundred's place signifies the year in which course is offered. e.g.

101, 102 ... etc. for first year.

201, 202 Etc.for second year.

301, 302 ... for third year.

- Category-wise Courses

HUMANITIES & SOCIAL SCIENCES COURSES [HS]

(i) Number of Humanities & Social Science Courses: 5

(ii) Credits: 15

S. No	Code No.	Course Title	Semester	Hours per week			Total Credits

III. ELECTIVE COURSES

1. PROFESSIONAL ELECTIVES COURSES (PEC)

PROFESSIONAL ELECTIVES COURSES (PEC)				
Sl. No.	Course Code	Course Title	Hrs/Week L:T:P	Credits
1	EEPECT-101	Artificial Neural Network	3:0:0	3
2	EEPECT-102	Biomedical Instrumentation	3:0:0	3
3	EEPECT-103	Communication System	3:0:0	3
4	EEPECT-104	Digital Signal Processing	3:0:0	3
5	EEPECT-105	Electric Power Quality	3:0:0	3
6	EEPECT-106	Electric Vehicle Technology	3:0:0	3
7	EEPECT-107	Electrical Energy Audit and Management	3:0:0	3
8	EEPECT-108	Embedded System Design	3:0:0	3
9	EEPECT-109	Fundamentals of FACTS	3:0:0	3
10	EEPECT-110	Fundamentals of Solar PV System	3:0:0	3
11	EEPECT-111	Robotics and Control	3:0:0	3
12	EEPECT-112	High Voltage Engineering	3:0:0	3
13	EEPECT-113	Industrial Automation (PLC and SCADA)	3:0:0	3
14	EEPECT-114	Modern Control System	3:0:0	3
15	EEPECT-115	Nano Electronics	3:0:0	3
16	EEPECT-116	Power System Restructuring and Deregulation	3:0:0	3
17	EEPECT-117	Protection and Switchgear	3:0:0	3
18	EEPECT-118	Smart Grid	3:0:0	3
19	EEPECT-119	Special Electrical Machines	3:0:0	3
20	EEPECT-120	Wind and solar Electrical System	3:0:0	3

OPEN ELECTIVES (OE)

The courses listed below are offered by the Department of Electrical and Electronics Engineering for students of other Departments.

LIST OF OPEN ELECTIVES				
Sl. No.	Course Code	Course Title	Hrs/Week L:T:P	Credits
1	EEOET-101	Analog and Digital Electronics	3:0:0	3
2	EEOET-102	Basics of Electrical Circuits	3:0:0	3
3	EEOET-103	Control System Engineering	3:0:0	3
4	EEOET-104	Electric Power Utilization	3:0:0	3
5	EEOET-105	Electrical Machines	3:0:0	3
6	EEOET-106	Power Electronics in Power Systems	3:0:0	3
7	EEOET-107	Introduction to Robotics and Automation	3:0:0	3
8	EEOET-108	Power System Engineering	3:0:0	3
9	EEOET-109	Energy Engineering	3:0:0	3
10	EEOET-110	Sensors and Transducer	3:0:0	3
11	EEOET-111	Power Plant Engineering	3:0:0	3

2. MINOR (MI)

Students who have registered for B.Tech. (**Minor - AI & GREEN ENERGY TECHNOLOGY**) in Electrical and Electronics Engineering from any other branches can opt to study Minimum 5 out of the courses listed below. Students of own Department (B.Tech. EEE) are not applicable for Minor Programme.

Sl. No.	Course Code	Course Title	Hrs/Week L:T:P	Credits
1	EEMIT-101	Solar Photovoltaic Systems	4:0:0	4
2	EEMIT-102	Wind Energy Technology	4:0:0	4
3	EEMIT-103	Power Electronics For Renewable Energy Systems	4:0:0	4
4	EEMIT-104	Energy Storage Technologies	4:0:0	4
5	EEMIT-105	Data Analytics And Forecasting In Energy Systems	4:0:0	4
6	EEMIT-106	AI & MACHINE Learning For Energy Engineering	4:0:0	4

4. ADVANCED LEVEL COURSES FOR B.Tech. (HONORS)

Students who have registered for B.Tech. (Honors) in Electrical and Electronics Engineering can opt to study Minimum 5 out of the courses listed below. Students of own Department (B.Tech. EEE) are applicable the Honors Programme.

Sl. No.	Course Code	Course Title	Hrs/Week L:T:P	Credits
1	EEHT-101	Distribution System Automation	4:0:0	4
2	EEHT-102	EHV AC AND DC Transmission	4:0:0	4
3	EEHT-103	Energy Storage Technology	4:0:0	4
4	EEHT-104	Modern Optimization Techniques For Electric Power Systems	4:0:0	4
5	EEHT-105	Vehicular Electric Power Systems	4:0:0	4
6	EEHT-106	Energy Efficient Buildings And Systems	4:0:0	4

PROJECT

Number of Courses: 3

(i) Credits: 16

S.No	Course code	Course Title	Semester	Lecture	Tutorial	Practical	Credits

SEMESTER – I

SEMESTER I

Induction Program (UHV-I)	Three-week duration(mandatory)
---------------------------	--------------------------------

Objective:

The induction program for students offered at the start of the first year aims to provide a holistic and enriching experience to new students, fostering their personal growth, academic preparedness, and a strong sense of belonging to the institution.

The program is designed to achieve the following objectives:

1. To help students smoothly transition from school to college life.
2. To facilitate opportunities for students to interact with their peers, faculty, and staff.
3. To enhance Physical Well-being: and encouraging Creative Expression.
4. To instill Universal Human Values.
5. To develop Communication and Literary Skills, Visit Local areas and get inspiration from Eminent Personalities and thus gain Confidence to nurture a Positive Learning Environment.

The Induction program contains.

- Physical activity
- Creative Arts
- Universal Human Values
- Literary
- Proficiency Modules
- Lectures by Eminent People
- Visits to local Areas
- Familiarization to Dept./Branch & Innovations

The Essence and Details of Induction program can also be understood from the “Detailed Guide on Student Induction program”, as available on AICTE Portal,

(Link:<https://www.aicteindia.org/sites/default/files/Detailed%20Guide%20on%20Student%20Induction%20program.pdf>).

BSCT101	Chemistry	3L:0T:0P	3 Credits
----------------	------------------	-----------------	------------------

Course Objectives:

- To acquaint the students with basic concepts of chemistry in understanding the atomic & molecular structure and its nanoscale applications.
- To understand the fundamental concepts of various spectroscopic techniques and applications.
- To understand the basic electrochemical properties such as thermodynamic functions, cell potentials, lead storage batteries, corrosion and phase rule.
- To describe and explain the observed trends in atomic size, ionization energy, and electron affinity of the elements.
- To identify the various types, preparation and applications of polymer used in the industrial processes.

Course Contents:

MODULE I - ATOMIC AND MOLECULAR STRUCTURE: 9 Hours

Atomic and Molecular Structure: Molecular orbital's of diatomic molecules. Band theory of solids. Liquid crystal and its applications. Point defects in solids. Structure and applications of Graphite and Fullerenes. Concepts of Nanomaterials and its application

MODULE II - SPECTROSCOPIC TECHNIQUES AND APPLICATIONS: 9 Hours

Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Elementary idea and simple applications of Rotational, Vibrational, Ultraviolet & Visible and Raman spectroscopy.

MODULE III – ELECTRO CHEMISTRY: 9 Hours

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and EMF. Cell potentials, Nernst Equation and application, Lead storage battery. Corrosion; causes, effects and its prevention. Phase Rule and its application to water system.

MODULE IV - PERIODIC PROPERTIES 9 Hours

Effective nuclear charge, penetration of orbital's, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electro-negativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries.

MODULE V – POLYMER: 9 Hours

Basic concepts of polymer-Blend and composites, Conducting and biodegradable polymers. Preparation and application of some industrially important polymers (BunaS, Buna-N, Neoprene, Nylon-6, nylon-6, 6 and Terylene). General methods of synthesis of organometallic compounds (Grignard reagent) and their applications.

Total No. of Hours: 45

Text Books:

1. B. H. Mahan, "University chemistry" Pearson Education, 2009.
2. C.N.R. Rao, "University Chemistry" World Scientific Publishing Company, 2009
3. M. J. Sienko and R. A. Plane, "Chemistry: Principles and Applications" McGraw-Hill, 3rd edition 1980.

Reference Books:

1. C. N. Banwell, "Fundamentals of Molecular Spectroscopy" McGraw-Hill Book Company, 1983.
2. B. L. Tembe, Kamaluddin and M. S. Krishnan, "Engineering Chemistry (NPTEL Web-book).
3. P. W. Atkins, Julio de Paula, "Physical Chemistry" Oxford University Press, 2018

Course Outcomes:

On successful completion of this course, the students will be able to,

- Get an understanding of the theoretical principles understanding molecular structure, bonding and properties
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
- Understand and explain the thermodynamic functions and cell potentials for different applications.
- Rationalize specific models and processes for better understanding of material properties and applications.
- Learn the synthesis of various industrially important polymer and its applications.

BSCP101	Chemistry Laboratory	0L:0T:2P	1 Credit
---------	----------------------	----------	----------

Course Objectives:

The Chemistry laboratory course will enable students to get a hands-on experience of determining various analysis parameters learnt in the theory course using different methods/techniques prevalent in analytical chemistry.

List of Experiments:

1. Determination of surface tension and viscosity.
2. Determination of chloride content of water.
3. Determination of cell constant and conductance of solutions.
4. Potentiometry - determination of redox potentials and emfs
5. Synthesis of a polymer/drug.
6. Determination of the partition coefficient of a substance between two immiscible liquids.
7. Saponification/acid value of oil.
8. Chemical analysis of a salt.
9. Lattice structures and packing of spheres.
10. Spectrophotometry: Beer-Lambert's law verification and determination of strength of unknown solution.
11. Thin layer chromatography.
12. Ion exchange column for removal of hardness of water.

The pH of minimum viscosity for gelatin sols and/or coagulation of the whitepart of egg.

Course Outcome:

The Chemistry laboratory course aims at developing abilities in combining chemical principles alongside handling instruments/techniques and synthesis methodologies to facilitate good understanding of the subject.

CSBS101	Mathematics-I	3L:1T:0P	4 Credits
---------	---------------	----------	-----------

Course Objective:

- To comprehend the mathematical concepts of matrices, ordinary differential equations, multivariable calculus and problem-solving.

MODULE I – LINEAR ALGEBRA(MATRICES)

12 Hours

Rank of a matrix - Consistency of a system of linear equations – Characteristic equation of a matrix - Eigen values and Eigen vectors - Properties of Eigen values and Eigen vectors - Cayley-Hamilton theorem (excluding proof)- Verification- Application (Finding Inverse and Power of a matrix)- Diagonalization of a matrix by orthogonal and similarity transformation- Quadratic form – Nature of Quadratic Form- Orthogonal reduction of quadratic form to canonical form.

MODULE II – ORDINARY DIFFERENTIAL EQUATIONS

12 Hours

Differential Equations of First Order- Exact equations- Leibnitz's linear equations- Bernoulli's equation- Equations solvable for p- Clairaut's equation- Differential equations of Higher order- Linear differential equations of higher order with constant coefficients- Euler's linear equation of higher order with variable coefficients- Method of variation of parameters

MODULE III – MULTIVARIABLE CALCULUS (DIFFERENTIATION)

12 Hours

Partial differentiation- Partial derivatives of first order and higher order- Partial differentiation of implicit functions- Euler's theorem on homogeneous functions – Total derivative - Jacobian Properties - Taylor's series for functions of two variables- Maxima and minima of functions of two variables.

MODULE IV – MULTIVARIABLE CALCULUS (MULTIPLE INTEGRALS)

12 Hours

Double integration (Cartesian form and Polar form)- constant limits- variable limits- over the region R- Change of variables in double integrals (Cartesian to polar)- Application of double integral- Area by double integration- Change of Order of Integration- Triple Integration (Cartesian- Spherical and Cylindrical)- constant limits- variable limits- over the region R- Application of triple integral- Volume by triple integration.

MODULE V – MULTIVARIABLE CALCULUS (VECTOR CALCULUS)

12 Hours

Vector Differential Operator- Gradient - Properties -Directional derivative - Divergence and curl Properties and relations- Solenoidal and Irrotational vector fields – Line integral and Surface integrals - Integral Theorems (excluding Proof) - Green's theorem - Stoke's theorem – Gauss divergence theorem.

Total No. of Hours: 60

Text Books:

1. Veerarajan T., “Engineering Mathematics - I & II ”, Tata McGraw-Hill, New Delhi, 2014 & 2015.
2. Dr. M.K. Venkataraman, “Engineering Mathematics – Volume I and Volume II”, The National Publishing Company, Chennai 2008.

Reference Books:

1. Grewal B.S., “Higher Engineering Mathematics”, Khanna Publishers, New Delhi, 43rd Edition, 2014.
2. Bali N.P and Manish Goyal., “A Text Book of Engineering Mathematics”, Laxmi Publications(P) Ltd, 2011.
3. Erwin Kreyszig, “Advanced Engineering Mathematics”, John Wiley & Sons, New Delhi, 9th Edition, 2011
4. Ramana B.V., “Higher Engineering Mathematics”, Tata McGraw-Hill, New Delhi, 2010.

Course Outcomes:

- To solve practical problems using Matrix algebra.
- To solve various types of ordinary differential equations, including higher-order linear equation.
- To compute partial derivatives, determine total derivatives, Jacobians, employ Taylor series, and find extremes of functions of two variables.
- To demonstrate proficiency in evaluating double integration and triple integration and using them to compute area and volume.
- To apply Green’s theorem, Stoke’s theorem and Gauss divergence theorem.

ONLINE / NPTEL Courses:

1. Differential equations for engineers: <https://nptel.ac.in/courses/111106100>
2. Calculus of Several Real Variables: <https://nptel.ac.in/courses/111104125>
3. Engineering Mathematics - I: <https://nptel.ac.in/courses/111105121>
4. Matrix Analysis with Applications: <https://nptel.ac.in/courses/111107112>

ESCP101	Engineering Graphics & Design	1L:0T:4P	3 Credits
---------	-------------------------------	----------	-----------

Course Objectives:

- *To provide the basic knowledge about Engineering Drawing.*
- *To learn the concepts of projections, technical drawing, dimensioning and specifications*
- *To understand the engineering graphics standards and solid modeling.*
- *To learn the analysis of Isometric views*
- *To understand the basic concepts of computer aided drafting hardware and its importance in the field of engineering and design.*

MODULE I- INTRODUCTION

Introduction, Conics and Special Curves

MODULE II- PROJECTIONS

Projection of points, lines and planes

MODULE III- SOLIDS:

Projection of solids, section of solids, development of surface

MODULE IV- ISOMETRIC PROJECTIONS:

Isometric and Orthographic projections

MODULE V- AUTOCAD:

Introduction to computer Aided Drafting hardware overview of application software – 2D drafting commands (Auto CAD) for simple shapes – Dimensioning

Text Books:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., “Engineering Drawing” Charotar Publishing House (2014).
2. Shah, M.B. & Rana B.C., “Engineering Drawing and Computer Graphics” Pearson Education (2008).
3. Agrawal B. & Agrawal C. M., “Engineering Graphics” TMH Publication, 2012.
4. K. Venugopal, “Engineering Drawing and Graphics + Auto CAD” 4th edition, New Age International Publication Ltd., 2004

Reference Books:

1. Narayana, K.L. & P Kannaiah, “Text book on Engineering Drawing” Scitech Publishers, 2008.
2. CAD Software Theory and User Manuals.

Course Outcomes:

On successful completion of this course, the students will be able to

- Describe engineering design and its place in society.
- Discuss the visual aspects of engineering design.
- Use engineering graphics standards.
- Illustrate solid modeling.
- Use computer-aided geometric design.
- Design creating working drawings.

ESCT102	Programming For Problem Solving	3L:0T:0P	3 Credits
----------------	--	-----------------	------------------

Course Objectives:

- *To learn the fundamentals of computers.*
- *To understand the various steps in program development.*
- *To learn the syntax and semantics of any programming language.*
- *To learn the usage of structured programming approach in solving problems.*

- *To understated and formulate algorithm for programming script*
- *To analyze the output based on the given input variables*

MODULE I - INTRODUCTION TO PROGRAMMING:

6 Hours

Introduction to components of a computer system: - disks, memory, processor, where a program is stored and executed, operating system, compilers etc. Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithms Flowchart/Pseudocode with examples.

MODULE II- ALGORITHMS TO PROGRAMS:

6 Hours

Source code, variables (with data types) variables and memory locations, Syntax and Logical Errors in compilation, object and executable code. Arithmetic expressions and precedence. Conditional Branching and Loops. Writing and evaluation of conditionals and consequent branching. Iteration and loops.

MODULE III - INTRODUCTION TO ARRAYS AND APPLICATIONS:

6 Hours

Arrays, Arrays (1-D, 2-D), Character arrays and Strings, Basic Algorithms, Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required)

MODULE IV – FUNCTIONS:

6 Hours

Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference. Recursion as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

MODULE V – STRUCTURES AND POINTERS:

6 Hours

Defining structures and Array of Structures. Pointers, Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling.

Total No. of Hours: 30

Text Books:

1. Byron Gottfried, Schaum's, "Outline of Programming with C", McGraw-Hill. 1996
2. Balaguruswamy, "Programming in ANSI C" Tata McGraw-Hill. 2019.

Reference Books:

1. Brian W. Kernighan and Dennis M. Ritchie, "The C Programming Language" Prentice Hall of India. Second Edition 2015.

Course Outcomes:

Upon successful completion of the course, students should be able to:

- Formulate simple algorithms for arithmetic and logical problems and translate the algorithms to programs and execute the programs and correct syntax and logical errors.
- Discuss the use of arrays for to work with arrays, strings, and basic data structures like linked lists, queues, and stacks.

Understand the use of functions in the programming language.

- Discuss the arrays and its significance in the programming language with involving array concepts.
- Implement the use of pointers and implementation of memory and handling of files in any programming.

ESCP102	Programming For Problem Solving Laboratory	0L:0T:2P	1 Credit
----------------	---	-----------------	-----------------

Course Objectives:

- *Introduce students to the fundamental concepts of the any programming language, including variables, data types, operators, and control structures.*
- *Introduce problem-solving techniques and algorithms to approach and solve programming challenges efficiently.*
- *Develop proficiency in writing any programs to implement algorithms and solve computational problems.*
- *Introduce students to basic data structures in any, such as arrays, strings, and pointers and guide them in applying these structures to solve problems effectively.*

List of Experiments:

1. Familiarization with programming environment
2. Simple computational problems using arithmetic expressions
3. Problems involving if-then-else structures
4. Iterative problems e.g., sum of series
5. 1D Array manipulation
6. Matrix problems, String operations
7. Simple functions
8. Programming for solving Numerical methods problems
9. Recursive functions
10. Pointers and structures
11. File operations.

Course Outcomes:

Upon successful completion of the course, students should be able to:

- Demonstrate the problem solving skills through programming simple logics.
- Demonstrate the array concepts and memory management through programming.
- Illustrate the pointers and file operations through programming.

BSCT103	Biology For Engineers	3L:0T:0P	3 Credits
----------------	------------------------------	-----------------	------------------

Course Objectives:

- *To familiarize the students with the basic biological concepts and their engineering applications.*
- *To develop the interdisciplinary vision of biological engineering.*
- *Familiarize engineering students with the principles of microbiology, including the structure and function of microorganisms, their significance in various engineering applications, and techniques for microbial analysis and identification.*

MODULE I - INTRODUCTION AND CLASSIFICATION OF BIOLOGICAL SCIENCE**9 Hours**

Bring out the fundamental differences between science and engineering by drawing a comparison between eye and camera, Bird flying and aircraft. Biological observations of 18th Century that lead to major discoveries. Examples from Brownian motion and the origin of thermodynamics by referring to the original observation of Robert Brown and Julius Mayor. Classification based on (a) energy and carbon utilization-Autotrophs, heterotrophs, lithotropes (b) Ammonia excretion – aminotelic, uricotelic, ureotelic (c) Habitat- aquatic or terrestrial (d) Molecular taxonomy- three major kingdoms of life.

MODULE II – GENETICS**9 Hours**

Mendel's laws, Concept of segregation and independent assortment. Concepts of excessiveness and dominance. Concept of mapping of phenotype to genes. Discuss about the single gene disorders in humans. Discuss the concept of complementation using human genetics.

MODULE III - BIOMOLECULES AND ENZYMES**9 Hours**

Discuss - monomeric units, polymeric structures, sugars, starch and cellulose, amino acids and proteins. Enzyme classification. Mechanism of enzyme action. Enzyme kinetics and kinetic parameters.

MODULE IV - INFORMATION TRANSFER**9 Hours**

DNA as a genetic material. Hierarchy of DNA structure- from single stranded to double helix to nucleosomes. Concept of genetic code. Universality and degeneracy of genetic code. Define gene in terms of complementation and recombination. DICOM Image formats, The DNA Technology (Use and Application) Regulation Bill, 2019

MODULE V - MICROBIOLOGY ANALYSIS**9 Hours**

Proteins- structure and function. Hierarchy in protein structure. Primary secondary, tertiary and quaternary structure. Proteins as enzymes, transporters, receptors and structural elements. Exothermic and endothermic versus endergonic and exergonic reactions. Synthesis of glucose from CO₂ and H₂O (Photosynthesis). Energy yielding and energy consuming reactions. Identification and classification of single celled organisms.

Total No. of Hours: 45**Text Books:**

1. Conn, E.E; Stumpf, P.K; Bruening, G; Doi, R.H., "Outlines of Biochemistry" John Wiley

and Sons, 2009.

2. Prescott, L.M J.P. Harley and C.A. Klein, "Microbiology" Wm C. Brown Publishers , 2nd edition 1995.

Reference Books:

1. Uma Devi Koduru, "General Biology" Khanna Book Publishing Company. 2022
2. Campbell, N. A.; Reece, J. B.; Urry, Lisa; Cain, M, L.; Wasserman, S. A.; Minorsky, P. V.; Jackson, R. B. "Biology: A global approach" Pearson Education Ltd. 12th Edition, 2020.
3. E.E; Stumpf, P.K; Bruening, G; Doi, R.H., "Outlines of Biochemistry" John Wiley and Sons. 2006.

Course Outcomes:

Upon successful completion of the course, students should be able to:

- Describe how biological observations of 18th Century that lead to major discoveries.
- Highlight the concepts of recessiveness and dominance during the passage of genetic material from parent to offspring
- Classify enzymes and distinguish between different mechanisms of enzyme action.
- Identify DNA as a genetic material in the molecular basis of information transfer.
- Identify and classify single celled microorganisms

ESCP103	DESIGN THINKING	0L:0T:2P	1 Credit
---------	-----------------	----------	----------

Course Objectives:

- *To provide the new ways of creative thinking*
- *To learn the innovation cycle of Design Thinking process*
- *To develop innovative products*

MODULE I - LEARNING, MEMORY AND EMOTIONS

6 Hours

Understanding the learning process, Kolb's learning styles, assessing and interpreting, understanding the memory process, problems in retention, memory enhancement techniques, understanding emotions: experience & expression, assessing empathy, application with peers

MODULE II - DESIGN THINKING, BEING INGENIOUS & FIXING PROBLEM

6 Hours

Definition of design thinking, need for design thinking, objectives of design thinking, concepts & brainstorming, stages of design thinking process (explain with examples) – empathize, define, ideate, prototype, test, understanding creative thinking process, understanding problem solving, testing creative problem solving.

MODULE III - PRODUCT DESIGN, PROTOTYPING & TESTING

6 Hours

Process of engineering product design, design thinking approach, stages of product design, examples of best product designs and functions, assignment – engineering product design, What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample Example, Test Group Marketing

MODULE IV - CELEBRATING THE DIFFERENCE AND CUSTOMER CENTRICITY

6 Hours

Understanding of individual differences & uniqueness, group discussion and activities to encourage the understanding, acceptance and appreciation of individual difference. Practical examples of customer challenges, use of design thinking to enhance customer experience, parameters of product experience, alignment of customer expectations with product design.

MODULE V - FEEDBACK, RE-DESIGN & RE-CREATE

9 Hours

Feedback loop, Focus on User Experience, Address “ergonomic challenges, User focused design, rapid prototyping & testing, final product, Final Presentation – “Solving Practical Engineering Problem through Innovative Product Design & Creative Solution”.

Total no. of Hours: 45

Course Outcomes:

On successful completion of the module students will be able to:

- Compare and classify the various learning styles and memory techniques and Apply them in their engineering education
- Analyze emotional experience and Inspect emotional expressions to better understand users while designing innovative products
- Develop new ways of creative thinking and Learn the innovation cycle of Design Thinking process for developing innovative products
- Propose real-time innovative engineering product designs and Choose appropriate frame works, strategies, techniques during prototype development
- Perceive individual differences and its impact on everyday decisions and further Create a better customer experience.

AU-101	IDEA LAB WORKSHOP	2L:0T:4P	0 Credit
---------------	--------------------------	-----------------	-----------------

Course Objectives:

- *To learn all the skills associated with the tools and inventory associated with the IDEA Lab.*
- *Learn useful mechanical and electronic fabrication processes.*
- *Learn necessary skills to build useful and standalone system/ project with enclosures.*
- *Learn necessary skills to create print and electronic documentation for the system /project.*

MODULE	Topics
1.	Electronic component familiarization, Understanding electronic system design flow. Schematic design and PCB layout and Gerber creation using Eagle CAD. Documentation using Doxygen, Google Docs, Overleaf. Version control tools - GIT and Git Hub. Basic 2D and 3D designing using CAD tools such as Free CAD, Sketchup, Prusa Slicer, Flat CAM, Ink space, Open BSP and Veri CUT.
2.	Familiarization and use of basic measurement instruments - DSO including various triggering modes, DSO probes, DMM, LCR bridge, Signal and function generator. Logic analyzer and MSO. Bench power supply (with 4-wire output) Circuit prototyping using (a) breadboard, (b) Zero PCB (c) „Manhattan“ style and (d) custom PCB. Single, double and multilayer PCBs. Single and double-sided PCB prototype fabrication in the lab. Soldering using soldering iron/station. Soldering using a temperature controlled reflow oven. Automated circuit assembly and soldering using pick and place machines.
3.	Electronic circuit building blocks including common sensors. Arduino and Raspberry Pi-programming and use. Digital Input and output. Measuring time and events. PWM. Serial communication. Analog input. Interrupts programming. Power Supply design (Linear and Switching types), Wireless power supply, USB PD, Solar panels, Battery types and charging.
4.	Discussion and implementation of a mini project.
5.	Documentation of the mini project (Report and video).

LABORATORY ACTIVITIES:

S. No.	List of Lab activities and experiments
1.	Schematic and PCB layout design of a suitable circuit, fabrication and testing of the circuit.
2.	Machining of 3D geometry on soft material such as soft wood or modeling wax.
3.	3D scanning of computer mouse geometry surface. 3D printing of scanned geometry using FDM or SLA printer.
4.	2D profile cutting of press fit box/casing in acrylic (3 or 6 mm thickness)/cardboard, MDF(2 mm) board using laser cutter & engraver.
5.	2D profile cutting on plywood /MDF (6-12 mm) for press fit designs.
6.	Familiarity and use of welding equipment.
7.	Familiarity and use of normal and wood lathe.
8.	Embedded programming using Arduino and/or Raspberry Pi.
9.	Design and implementation of a capstone project involving embedded hardware, software and machined or 3D printed enclosure.

Reference Books:

1. Chris Hackett, Weldon Owen, “The Big Book of Maker Skills: Tools & Techniques for Building Great Tech Projects”. 2018.
2. Sean Michael Ragan, Weldon Owen; “The Total Inventors Manual (Popular Science): Transform Your Idea into a Top-Selling Product”, 2017.
3. Paul Horowitz and Winfield Hill, “The Art of Electronics”. Cambridge University Press. 3rd edition. 1995.
4. Simon Monk, “Programming Arduino: Getting Started with Sketches” McGraw Hill. 2nd edition. 2012.
5. Ian Gibson, David W Rosen, Brent Stucker., “Additive Manufacturing Technologies: Rapid Prototyping to Direct Digital Manufacturing”, Springer, 2010.
6. Chapman W.A.J, “Workshop Technology”, Volume I, II, III, CBS Publishers and distributors, 5th Edition, 2002.

SEMESTER – II

BSCT104	Physics	3L:1T:0P	4 Credits
----------------	----------------	-----------------	------------------

Course Objectives:

- *To understand the physics of simple harmonic motion (SHM) and its applications in various fields.*
- *To understand the characteristics and behavior of non-dispersive transverse and longitudinal waves in one dimension and to introduce the concept of dispersion in waves and its implications.*
- *To understand the behavior and propagation of light and to study the principles of geometric optics and their applications.*
- *To understand the wave nature of light and its interactions with matter and study the principles of wave optics and their applications.*
- *To understand the principles and applications of lasers and study the properties and behavior of laser light.*

MODULE I - SIMPLE HARMONIC MOTION AND OSCILLATOR **12 Hours**

Mechanical and electrical simple harmonic oscillators, complex number notation and phasor representation of simple harmonic motion, damped harmonic oscillator – heavy, critical and light damping, energy decay in a damped harmonic oscillator, quality factor, forced mechanical and electrical oscillators, electrical and mechanical impedance, steady state motion of forced damped harmonic oscillator, power absorbed by oscillator.

MODULE II - WAVES AND INTRODUCTION TO DISPERSION **12 Hours**

Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, impedance matching, standing waves and their Eigen frequencies, longitudinal waves and the wave equation for them, acoustics waves and speed of sound, standing sound waves. Waves with dispersion, water waves, superposition of waves and Fourier method, wave groups and group velocity.

MODULE III - PROPAGATION AND GEOMETRIC OPTICS **12 Hours**

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them, transfer formula and the matrix method.

MODULE IV - WAVE OPTICS **12 Hours**

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer, Mach-Zehnder interferometer. Fraunhofer diffraction from a single slit and a circular aperture, the Rayleigh criterion for limit of resolution and its application to vision; Diffraction gratings and their resolving power.

MODULE V – LASERS**12 Hours**

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO₂), solid-state lasers (ruby, Neodymium), dye lasers; Properties of laser beams: monochromaticity, coherence, directionality and brightness, laser speckles, applications of lasers in science, engineering and medicine.

Total No. of Hours: 60**Course Outcomes:**

On successful completion of the module students will be able to:

- Solve engineering problems dealing with simple, damped, or forced harmonic oscillation and perform Fourier analysis of wave phenomena.
- Differentiate between transverse and longitudinal waves and explain their properties.
- Understand the generation and propagation of light and explain the principles of geometric optics, including reflection and refraction.
- Understand the wave nature of light and its properties, such as interference and diffraction.
- Understand the basic principles of laser operation, including population inversion and stimulated emission

Text Books:

1. Ian G. Main, "Vibrations and Waves" Physics Cambridge University Press; 3rd Edition (1993).
2. H.J. Pain, "The physics of vibrations and waves" John Wiley & Sons, Ltd. 6th Edition 2005.

Reference Books:

1. E. Hecht, "Optics" Addison Wesley (2001)
2. O. Svelto, "Principles of Lasers" Springer books, 2010.
3. R.N. Chaudhuri, "Waves and Oscillations" New Age International (P) Limited, 2010.

BSCP104	Physics Laboratory	0L:0T:2P	1 Credit
----------------	---------------------------	-----------------	-----------------

Course Objectives:

- *To observe and study the diffraction pattern produced by a single slit.*
- *To observe and study the interference pattern produced by double slits.*
- *To verify the wave nature of light and measure the wavelength of light.*
- *To measure the speed of light using a Michelson interferometer setup.*
- *To measure the speed of light on a tabletop using the modulation technique.*

List of Experiments

1. Single-Slit Diffraction Experiment
2. Double-Slit Interference Experiment

3. Young's Double-Slit Experiment
4. Michelson Interferometer (Measurement of Speed of Light)
5. Measurement of Speed of Light using Modulation
6. Minimum Deviation from a Prism
7. Lloyd's Mirror Interferometer.
8. Experiments to study Lasers.

Course Outcomes:

- Comprehend the concept of interference and how waves combine constructively and destructively to produce varying amplitudes.
- Understand the single-slit diffraction pattern and calculate the angles of diffraction for different wavelengths and slit sizes.
- Understand the double-slit interference pattern and calculate fringe spacing and angles of interference for various setups.
- Develop skills to analyze and interpret interference patterns resulting from different light sources and experimental configurations.
- Develop a comprehensive understanding of the fundamental principles of laser operation, including stimulated emission, population inversion, and optical gain.

CSBS202	Mathematics- II	3L:1T:0P	4 Credits
----------------	------------------------	-----------------	------------------

Course Objective:

- To formulate and solve partial differential equations, Laplace, Fourier transforms within the engineering domain.

MODULE I – PARTIAL DIFFERENTIAL EQUATIONS

12 Hours

Formation of partial differential equations, Solutions of standard types of first order partial differential equations, Lagrange's linear equation, Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

MODULE II – LAPLACE TRANSFORM

12 Hours

Existence conditions, Transforms of elementary functions, Properties, Transform of unit step function and unit impulse function, Transforms of derivatives and integrals, Transforms of Periodic Functions, Initial and final value theorems.

MODULE III – INVERSE LAPLACE TRANSFORM

12 Hours

Inverse Laplace Transforms Properties, Convolution theorem, Application - Solution of ordinary differential equations with constant coefficients - Solution of simultaneous ordinary differential equations.

MODULE IV – FOURIER TRANSFORM

12 Hours

Fourier Integral theorem (statement only), Fourier transform and its inverse, Properties: Fourier sine and cosine transforms, Properties, Convolution and Parseval's identity.

MODULE V – FOURIER SERIES**12 Hours**

Dirichlet's conditions, Expansion of periodic functions into Fourier series- Change of interval, Half-range Fourier series, Root mean square value - Parseval's theorem on Fourier coefficients, Harmonic analysis

Total No. of Hours: 60**Text Books:**

1. Grewal B.S., "Higher Engineering Mathematics", Khanna Publishers, New Delhi, 43rd Edition, 2015.
2. Veerarajan T, "Transforms and Partial Differential Equations", Tata McGraw-Hill, New Delhi, 2012.

Reference Books:

1. Bali N.P and Manish Goyal., "A Text Book of Engineering Mathematics", Laxmi Publications(P) Ltd, 2011.
2. Erwin Kreyszig, "Advanced Engineering Mathematics", John Wiley & Sons, New Delhi, 9th Edition, 2011.
3. Ramana B.V., "Higher Engineering Mathematics", Tata McGraw-Hill, New Delhi, 2010.

Course Outcomes:

Upon completion of the course, students will be able to:

- To formulate and solve various types of partial differential equations.
- To understand the Laplace transform and its properties.
- To apply Laplace transforms to solve ordinary differential equations with constant coefficients and simultaneous ordinary differential equations.
- To understand and apply Fourier transform techniques, including Fourier integral theorem, properties of Fourier transforms, convolution, and Parseval's identity.
- To apply Fourier series and harmonic analysis, enabling them to analyze and synthesize periodic signals and functions in various engineering and mathematical applications.

ONLINE / NPTEL Courses:

1. Laplace Transform: <https://nptel.ac.in/courses/111106139>
2. Partial Differential Equations: <https://nptel.ac.in/courses/111101153>
3. Advanced Engineering Mathematics: <https://nptel.ac.in/courses/111107119>

ESCT104	Basic Electrical Engineering	2L: 1T:0 P	3 Credits
----------------	-------------------------------------	-------------------	------------------

Course Objectives:

- *To understand and gain basic knowledge about DC and AC circuits.*
- *To learn the concept of single phase and three phase circuit with power measurement.*
- *To study the operating principles of Transformers.*
- *To explore the working of the DC Machines and motors.*
- *To study the three phase induction motors.*

MODULE I - D. C. CIRCUITS**9 Hours**

Ohm's Law and Kirchhoff's Laws; Analysis of series, parallel and series-parallel circuits

excited by independent voltage sources; Power and energy; Electromagnetism covering, Faradays Laws, Lenz's Law, Fleming's Rules, Statically and dynamically induced EMF; Concepts of self-inductance, mutual inductance and coefficient of coupling; Energy stored in magnetic fields;

MODULE II - A.C. CIRCUITS

9 Hours

Generation of sinusoidal voltage- definition of average value, root mean square value, form factor and peak factor of sinusoidal voltage and current and phasor representation of alternating quantities; Analysis with phasor diagrams of R, L, C, RL, RC and RLC circuits; Real power, reactive power, apparent power and power factor, series, parallel and series-parallel circuits; Three Phase A.C. Circuits - Necessity and Advantages of three phase systems, Generation of three phase power, definition of Phase sequence, balanced supply and balanced load; Relationship between line and phase values of balanced star and delta connections; Power in balanced three phase circuits, measurement of power by two wattmeter method;

MODULE III – TRANSFORMERS

9 Hours

Principle of operation and construction of single-phase transformers (core and shell types). EMF equation, losses, efficiency and voltage regulation

MODULE IV - DC MACHINES

9 Hours

Working principle of DC machine as a generator and a motor; Types and constructional features; EMF equation of generator, relation between EMF induced and terminal voltage enumerating the brush drop and drop due to armature reaction; DC motor working principle; Back EMF and its significance, torque equation; Types of D.C. motors, characteristics and applications; Necessity of a starter for DC motor;

MODULE V- THREE PHASE INDUCTION MOTORS

9 Hours

Concept of rotating magnetic field; Principle of operation, types and constructional features; Slip and its significance; Applications of squirrel cage and slip ring motors; Necessity of a starter, star-delta starter.

Total No. of Hours: 45

Text Books:

1. Nagrath I.J. and D. P. Kothari, “Basic Electrical Engineering” Tata McGraw Hill (2001).
2. Hayt and Kimberly, “Engineering Circuit Analysis” Tata McGraw Hill, 8th Edition, 2013.

References Books:

1. Kulshreshtha D.C., “Basic Electrical Engineering” Tata McGraw Hill (2009).
2. Rajendra Prasad, “Fundamentals of Electrical Engineering” Prentice Hall, India/Hughes, 2009.

Course Outcomes:

On successful completion of the module students will be able to

- Understand the concept of DC circuits and Electromagnetic principles over inductors,
- Explain the concepts of AC circuits over RLC circuits and with knowledge of power and load performance and Obtain the power measurement using single phase and three

phase circuit

- Discuss the principles of operation and construction of single-phase transformers
- Explain the operation and characterizes of DC machines and motors.
- Illustrate the principle of the three phase induction motors.

ESCP104	Basic Electrical Engineering Laboratory	0L:0T:2 P	1 Credit
---------	---	-----------	----------

Course Objectives:

- *Understand the importance of electrical safety in handling electrical equipment and wiring.*
- *Understand the techniques for making secure and reliable electrical joints.*
- *Understand the principles of series and parallel circuits and their applications in lamp circuits.*
- *Learn the concept and purpose of staircase, wiring in residential and commercial settings.*
- *Learn the concept of load tests in motors and transformers.*

List of Experiments

1. Electrical Safety, Precautions, study of tools and accessories.
2. Practices of different joints. Wiring and testing of series and parallel lamp circuits.
3. Staircase wiring, Doctor's room wiring.
4. Bed room and godown wiring
5. Wiring and testing a ceiling fan and fluorescent lamp circuit.
6. Study of different types of fuses, circuit breakers and A.C and D.C meters.
7. OC and SC test on single phase transformer.
8. Load test on single phase transformer.
9. Load test on DC shunt motor.
10. Two wattmeter method of power measurement.
11. Load test on single phase induction. and 3 phase induction motor.
12. Speed control methods of DC motor

Course Outcomes:

On successful completion of the experiment students will be able to

- Demonstrate a thorough understanding of electrical safety practices, including the use of personal protective equipment (PPE) and safety guidelines.
- Design and execute wiring layouts for series and parallel lamp circuits, understanding their applications and advantages.
- Plan and execute a staircase/ n wiring system, incorporating appropriate switching mechanisms for efficient and convenient lighting control.

- Evaluate the performance of Transformers and motors for different loads.
- Discuss the power measurements in DC machines.

ESCP105	Digital Fabrication	0L:0T:4P	2 Credits
---------	---------------------	----------	-----------

Course Objectives:

The course is designed to impart knowledge and skills related to 3D printing technologies, selection of material and equipment and develop a product using this technique in Industry environment.

Course Contents:

1. 3D Printing (Additive Manufacturing)

Introduction, Process, Classification, Advantages, Additive V/s Conventional Manufacturing processes, Applications.

2. CAD for Additive Manufacturing

CAD Data formats, Data translation, Data loss, STL format.

3. Additive Manufacturing Techniques

Stereo- Lithography, LOM, FDM, SLS, SLM, Binder Jet technology. Process, Process parameter, Process Selection for various applications. Additive Manufacturing Application Domains: Aerospace, Electronics, Health Care, Defence, Automotive, Construction, Food Processing, Machine Tools

4. Materials

Polymers, Metals, Non-Metals, Ceramics.

Various forms of raw material- Liquid, Solid, Wire, Powder; Powder Preparation and their desired properties, Polymers and their properties.

Support Materials.

5. Additive Manufacturing Equipment

Process Equipment- Design and process parameters Governing Bonding Mechanism

Common faults and troubleshooting Process Design

6. Post Processing: Requirement and Techniques

7. Product Quality

Inspection and testing Defects and their causes

List of Experiments

1. 3D Modelling of a single component.
2. Assembly of CAD modelled Components.

3. Exercise on CAD Data Exchange.
4. Generation of .stl files.
5. Identification of a product for Additive Manufacturing and its AM process plan.
6. Printing of identified product on an available AM machine.
7. Post processing of additively manufactured product.
8. Inspection and defect analysis of the additively manufactured product.
9. Comparison of Additively manufactured product with conventional manufactured counterpart.

Course Outcomes:

After completion of this course, the students will be able to:

- Develop CAD models for 3D printing.
- Import and Export CAD data and generate. stl file.
- Select a specific material for the given application.
- Select a 3D printing process for an application.
- Produce a product using 3D Printing or Additive Manufacturing (AM).

HSMC101	English For Technical Writing	2L:0T:2P	3 Credit
----------------	--------------------------------------	-----------------	-----------------

Course Objectives:

- *To provide learning environment to practice listening, speaking, reading and writing skills and assist the students to carry on the tasks and activities through guided instructions and materials.*
- *To effectively integrate English language learning with employability skills and training, by providing hands-on experience through case-studies, mini-projects, group and individual presentations.*

MODULE I - VOCABULARY BUILDING

9 Hours

The concept of Word Formation, Root words from foreign languages and their use in English. Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives. Synonyms, antonyms, and standard abbreviations.

MODULE II - BASIC WRITING SKILLS

9 Hours

Sentence Structures, Use of phrases and clauses in sentences, Importance of proper punctuation, Creating coherence, Organizing principles of paragraphs in documents, Techniques for writing precisely.

MODULE III - IDENTIFYING COMMON ERRORS IN WRITING

9 Hours

Subject-verb agreement, Noun-pronoun agreement, Misplaced modifiers, Articles, Prepositions, Redundancies and Clichés.

MODULE IV - NATURE, STYLE OF SENSIBLE WRITING**9 Hours**

Describing, Defining, Classifying, Providing examples or evidence, Writing introduction and conclusion

MODULE V - WRITING PRACTICES AND ORAL COMMUNICATION **9 Hours**

Comprehension, Précis Writing, Essay Writing, Listening Comprehension, Pronunciation, Intonation, Stress and Rhythm, Common Everyday Situations: Conversations and Dialogues, Communication at Workplace, Interviews, Formal Presentations.

Total No. of Hours: 45**Text Books:**

1. Effective Communication Skills. Kul Bhushan Kumar, Khanna Book Publishing, 2022.
2. Practical English Usage. Michael Swan. OUP. 1995.
3. Remedial English Grammar. F.T. Wood. Macmillan, 2007.

Reference Books:

1. On Writing Well. William Zinsser. Harper Resource Book. 2001.
2. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.

Course Outcomes:

Upon successful completion of the course, students should be able to

- Aware of correct usage of English grammar in writing and speaking
- Increase their reading speed and comprehension of academic articles
- Improve their reading fluency skills through extensive reading
- Speaking ability in English both in terms of fluency and comprehensibility
- Oral presentations and receive feedback on their performance.

HSMC-102	Universal Human Values - II	2L:1T:0P	3 Credits
-----------------	------------------------------------	-----------------	------------------

PRE-REQUISITES: None. Universal Human Values 1 (Desirable)

Course Objectives:

During the Induction Program, students would get an initial exposure to human values through Universal Human Values-I. This exposure is to be augmented by this compulsory full semester foundation course. This introductory course input is intended:

- *To help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.*
- *To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value- based living in a natural way.*
- *To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature.*
- *Thus, this course is intended to provide a much-needed orientational input in value education to the young enquiring minds.*

MODULE I – INTRODUCTION TO VALUE EDUCATION**9 Hours**

Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education); Understanding Value Education; Self-exploration as the Process for Value Education; Continuous Happiness and Prosperity – the Basic Human Aspirations; Happiness and Prosperity – Current Scenario; Method to Fulfill the Basic Human Aspirations: Exploring Natural Acceptance.

MODULE II – HARMONY IN THE HUMAN BEING**9 Hours**

Understanding Human being as the Co-existence of the Self and the Body; Distinguishing between the Needs of the Self and the Body; Exploring the difference of Needs of Self and Body; The Body as an Instrument of the Self; Understanding Harmony in the Self ; Harmony of the Self with the Body ; Programme to ensure self-regulation and Health; Exploring Harmony of Self with the Body.

MODULE III – HARMONY IN THE FAMILY AND SOCIETY**9 Hours**

Harmony in the Family – the Basic Unit of Human Interaction; „Trust’ – the Foundational Value in Relationship; 'Respect' – as the Right Evaluation; Other Feelings, Justice in Human- to-Human Relationship; Understanding Harmony in the Society; Vision for the Universal Human Order.

MODULE4 – HARMONY IN THE NATURE/EXISTENCE**9 Hours**

Understanding Harmony in the Nature; Interconnectedness, self-regulation and Mutual Fulfillment among the Four Orders of Nature: - Exploring the Four Orders of Nature; Realizing Existence as Co-existence at All Levels; The Holistic Perception of Harmony in Existence: - Exploring Co-existence in Existence.

MODULE5 – IMPLICATIONS OF THE HOLISTIC UNDERSTANDING – A LOOK AT PROFESSIONAL ETHICS**9 Hours**

Natural Acceptance of Human Values; Definitiveness of (Ethical) Human Conduct: - Exploring Ethical Human Conduct; A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order; Competence in Professional Ethics:- Exploring Humanistic Models in Education; Holistic Technologies, Production Systems and Management Models-Typical Case Studies; Strategies for Transition towards Value-based Life and Profession.

Total No. of Hours: 45**Text Book and Teachers Manual**

1. R R Gaur, R Asthana, G P Bagaria, “A Foundation Course in Human Values and Professional Ethic”,Excel Books, 2nd Revised Edition, New Delhi, 2019.
2. A.N. Tripathi, “Human Values” New Age Intl. Publishers, New Delhi, 2004.

Reference Books:

1. Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak,” Jeevan Vidya”1999.
2. The Story of Stuff (Book).
3. Mohandas Karamchand Gandhi “The Story of My Experiments with Truth”.

Course Outcomes:

On successful completion of the course the students will be able to

- Discuss the Right understanding about the human aspirations.

- Explore the harmony in the human being with the right understanding about the body and self.
- Develop effective communication skills for promoting understanding and resolving conflicts within the family and society with Trust and Respect.
- Develop a comprehensive understanding of the concept of harmony and its significance in nature and human life.
- Recognize the Natural Acceptance of Human Values and Strategies for Transition towards Value-based Life and Profession.

AU-102	Sports and Yoga	1L:0T:1P	0 Credit
---------------	------------------------	-----------------	-----------------

Course Objectives:

- *To make the students understand the importance of sound health and fitness principles as they relate to better health.*
- *To expose the students to a variety of physical and yogic activities aimed at stimulating their continued inquiry about Yoga, physical education, health and fitness.*
- *To create a safe, progressive, methodical and efficient activity based plan to enhance improvement and minimize risk of injury.*
- *To develop among students an appreciation of physical activity as a lifetime pursuit and a means to better health.*

MODULE I - INTRODUCTION TO PHYSICAL EDUCATION

9 Hours

Meaning & definition of Physical Education; Aims & OBJECTIVESs of Physical Education; Changing trends in Physical Education; Ancient & Modern Olympics (Summer & Winter); Olympic Symbols, Ideals, OBJECTIVESs & Values; Awards and Honours in the field of Sports in India (Dronacharya Award, Arjuna Award, Dhyanach and Award, Rajiv Gandhi Khel Ratna Award etc.)

MODULE II - PHYSICAL FITNESS, WELLNESS AND LIFE STYLE

9 Hours

Meaning & Importance of Physical Fitness & Wellness. Components of Physical fitness Components of Health related fitness. -Components of wellness. - Preventing Health Threats through Lifestyle Change; Concept of Positive Lifestyle; Nutritional practices for good Health.

MODULE III - FUNDAMENTALS OF ANATOMY AND PHYSIOLOGY IN PHYSICAL EDUCATION, SPORTS AND YOGA

9 Hours

Define Anatomy, Physiology & Its Importance; Effect of exercise on the functioning of Various Body Systems. (Circulatory System, Respiratory System, Neuro-Muscular System etc.)

MODULE IV - YOGA AND LIFESTYLE

9 Hours

Meaning & Importance of Yoga, Elements of Yoga; Introduction - Asanas, Pranayama, Meditation & Yogic Kriyas; Yoga for concentration & related Asanas (Sukhasana; Tadasana; Padmasana & Shashakasana); Relaxation Techniques for improving concentration Yog-nidra

Asanas as preventive measures.

Hypertension: Tadasana, Vajrasana, Pavan Muktasana, Ardha Chakrasana Bhujangasana, Sharasana.

Obesity: Procedure, Benefits & contraindications for Vajrasana, Hastasana, Trikonasana, Ardha Matsyendrasana.

Back Pain: Tadasana, Ardha Matsyendrasana, Vakrasana, Shalabhasana, Bhujangasana. *Diabetes:* Bhujangasana, Paschimottasana, Pavan Muktasana, Ardha Matsyendrasana. *Asthma:* Sukhasana, Chakrasana, Gomukhasana, Parvatasana, Bhujangasana, Paschimottasana, Matsyasana.

MODULE V - PSYCHOLOGY & SPORTS**9 Hours**

Definition & Importance of Psychology in Physical Edu. & Sports; Define & Differentiate Between Growth & Development; Adolescent Problems & Their Management; Emotion: Concept, Type & Controlling of emotions; Meaning, Concept & Types of Aggressions in Sports. Psychological benefits of exercise. Anxiety & Fear and its effects on Sports Performance. Motivation, its type & techniques. Understanding Stress & Coping Strategies. Meaning and Concept of Doping ; Prohibited Substances & Methods :- Side Effects of Prohibited Substances.

Total No. of Lectures: 45**Text Books:**

1. Ajmer Singh, Jagdish Bains , Jagtar Singh Gill and Rachpar Singh Brar, “Essentials of Physical Education” by Kalyani publications, 2022.
2. B.K.S. Iyengar, “Light On Yoga: The Classic Guide to Yoga by the World's Foremost Authority” 2006.
3. Health and Physical Education – NCERT (11th and 12th Classes).

Course Outcomes:

On successful completion of the course the students will be able to:

1. Discuss the physical education needs and history with reference to awards given in promotion of the sports in India.
2. Practice Physical activities and Hatha Yoga and Breathing techniques focusing on yoga for strength, flexibility, and relaxation, including strength and flexibility, balance and coordination.
3. Learn techniques for increasing concentration and decreasing anxiety which leads to stronger academic performance.
4. Develop understanding of health-related fitness components: cardio respiratory endurance, flexibility and body composition etc.
5. Develop understanding of psychological problems associated with the age and lifestyle.
6. Demonstrate an understanding of sound nutritional practices as related to health and physical performance.

SEMESTER – III

BST-206	Engineering Mathematics –III (Applications of Partial Differential Equations & Numerical Techniques)	2L:1T:0P	3 Credits
----------------	---	-----------------	------------------

Course Objectives:

- *To solve one dimensional wave equations and one dimensional heat flow equations using Fourier series solutions.*
- *To solve two dimensional steady-state heat flow equations using Fourier series solutions.*
- *Numerical Methods for Solving Linear Systems*
- *Methods to solve equations of One Variable as well as system of equations with two variables.*
- *Curve fitting for the given data and Numerical solution of linear difference equation.*

MODULE I: APPLICATIONS OF PDEs (WAVE EQUATION)

9 Hours

Solution of PDE by Method of separation of variables – Classification of PDE – Fourier Series Solutions of one dimensional wave equation.

MODULE II: APPLICATIONS OF PDEs – II (HEAT EQUATION)

9 Hours

Fourier Series Solutions of one dimensional equation of heat flow equation – Steady state solution of two dimensional equation of heat flow equation (Cartesian and Polar).

MODULE III - SOLUTION OF LINEAR SYSTEM

9 Hours

Gaussian elimination and Gauss-Jordan methods - LU - decomposition methods - Crout's method - Jacobi and Gauss-Seidel iterative methods - sufficient conditions for convergence.

MODULE IV - SOLUTION OF NONLINEAR SYSTEM

9 Hours

- Bisection method - Secant method - Regula falsi method - Newton- Raphson method for $f(x) = 0$ and for $f(x,y) = 0$, $g(x,y) = 0$ - Order of convergence. Newton's forward, backward and divided difference interpolation – Lagrange's interpolation

MODULE V - CURVE FITTING

9 Hours

Method of least squares and group averages - Least square approximation of functions - solution of linear difference equations with constant coefficients

Total No. of Hours: 45

Text Books:

1. Grewal.B.S., Higher Engineering Mathematics, Khanna Publisher, Delhi, 43rd Edition, 2012
2. Debnath L., and Dambaru Bhatta, Integral Transforms and Their Applications, 2nd Edition, (Special Indian Ed).Chapman & Hall/CRC, Indian Edition, 2010
3. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons, 2010.

Reference Books:

1. David Kincaid and Ward Cheney, Numerical Analysis, 3rd edition, American Mathematics Society, (Indian edition) – 2010.
2. Gerald C.F., and Wheatley P.O., Applied Numerical Analysis, Addison-Wesley Publishing Company, 1994
6. Jain, M.K., Iyengar, S.R. and Jain, R.K., Numerical Methods for Scientific and Engineering Computation, New Age international, 2003

Course Outcomes:

On completion of the course, students should be able to:

- To be proficient in solving wave equation using Fourier series solutions.
- To be proficient in heat flow equations using Fourier series solutions.
- Discuss the Fourier series analysis and its use in solving boundary value problems.
- Apply Numerical Methods for Solving Linear Systems
- Understanding the Methods to solve equations of One Variable as well as system of equations with two variables.

EEPCCT-201	Circuit Theory	3L:0T:0P	3 Credits
-------------------	-----------------------	-----------------	------------------

Course Objectives:

- *To analyze the given electrical network using Kirchhoff's laws.*
- *To introduce the basic knowledge of Laplace transform and Fourier Transform and to analyze the network using suitable technique.*
- *To analyze the two-port network.*
- *To understand the use of network topology in circuit solving.*

MODULE I - LOOP AND NODAL ANALYSIS**9 Hours**

Kirchhoff's laws, Node and Loop equations, Matrix approach of complicated network containing voltage and current sources, and source transformation.

MODULE II -NETWORK THEOREM**9 Hours**

Superposition, Thevenin's, Norton's, Maximum power Transfer, Reciprocity theorem as applied to DC and AC. circuits.

MODULE III - TWO PORT NETWORK AND NETWORK FUNCTIONS **9 Hours**

Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, and hybrid parameters, interconnections of two port networks.

MODULE IV - RLC CIRCUITS **9 Hours**

Transient analysis of RC, RL, and RLC networks with and without initial conditions- Laplace transforms evaluation of initial conditions for sinusoidal response, Analysis of series - parallel resonance circuits and inductively coupled circuits - single tuned and double tuned circuits.

MODULE V - NETWORK TOPOLOGY **9 Hours**

Network terminology- Graph of a network- Incidence and reduced incidence matrices-Trees- Cut set-Fundamental cut set- Cut set matrix Tie set- Link currents and Tie set schedules- Twig voltages and Cut set schedules, Duality and dual networks.

Total No. of Hours: 45

Text Books:

1. Van, Valkenburg.; “Network analysis”; Prentice hall of India, 2000.
2. A William Hayt, “Engineering Circuit Analysis” McGraw Hill Science Engineering, 8th Edition, 2013.
3. A. Sudhakar, Shyammohan S. Palli , “Circuits and Networks: Analysis and Synthesis”, McGraw Hill Publications, 5th Edition, 2015.

Reference Books:

1. Ashfaq Husain, Networks and Systems, Khanna Book Publishing, 2021.
2. Mahmood Nahvi, Joseph Edminister, “Electric Circuits (Schaum's Outline series)”, McGraw-Hill Publications, 5th Edition, 2017.

Course Outcomes:

At the end of this course students will demonstrate the able to

- Analyze the circuit using Kirchhoff’s law and Network simplification theorems.
- Infer and evaluate Transient response and Steady state response of a network.
- Analyze electrical networks in the Laplace domain and understand concept of network functions and stability.
- Compute the parameters of a two-port network.
- Analyze the network terminology.

EEPCCT-202	DC Machines & Transformers	3L: 0T:0 P	3 Credits
------------	----------------------------	------------	-----------

Course Objectives:

- *To familiarize the basic knowledge about magnetic circuits and working of DC generator.*
- *To explore the working and speed control of DC motors.*
- *To learn the operations and characteristics of single phase transformer with load and no load.*
- *To explore the working and various types of three phase transformer connections in three phase transformer.*
- *To test and analyze the characteristics of transformer and DC machines.*

MODULE I - ELECTROMECHANICAL ENERGY CONVERSION AND DC GENERATOR

9 Hours

Electromechanical energy conversion concept–Review of magnetic circuits-Single and multiple excited systems. DC Generators: Construction of DC Machine – Principle of operation – Types of Windings, types-Characteristics – EMF equation -Losses and efficiency-Armature Reaction – Commutation - methods of improving commutation – Applications.

MODULE II - DC MOTORS

9 Hours

Principle of operation - Back emf - Torque equation -Condition for maximum efficiency - Power flow diagram – types - Performance characteristics. Starters: Need for starter – types - Speed control: Armature and field Speed control – Electric braking – Applications

Module III - SINGLE PHASE TRANSFORMERS

9 Hours

Single Phase Transformers: Construction - Types – Principle of operation - emf equation - Operation of transformer under no load and on load- Phasor diagrams - Equivalent circuit; Losses and efficiency; Regulation and all-day efficiency- Parallel operation-Auto transformer: copper savings – Applications.

Module IV - THREE PHASE TRANSFORMERS

9 Hours

Three Phase Transformers: Construction – Principle of operation – Types of connections – Open delta – Scott connection – three-phase to single phase conversion – three phase to two phase conversion – Tap changing transformers - off load and on load tap changers-Applications.

MODULE V - TESTING OF DC MACHINES AND TRANSFORMERS 9 Hours

Testing Of Dc Machines: Load test – Swinburne's test - Hopkinson's test - Retardation test-speed control. Testing of Transformers: Load test – OC and SC test – Polarity test - Sumpner's test – Separation of no load losses, parallel operation.

Total No. Of Hours: 45

Text Books

1. A.E.Fitzgerald, Charles Kingsley, Jr, Stephen D Umans, "Electric Machinery", Tata McGraw Hill Education, India , 5th Edition, 2017.
2. B. L. Theraja and A. K. Theraja, —A Textbook of Electrical Technology-Vol. II, S. Chand & Co. Ltd., New Delhi, 23rd Multicolor Edition, 2016.
3. DP Kothari, IJ Nagrath, "Electric Machines", Tata McGraw Hill Education, India, 5th Edition, 2017.

Reference Books

1. J. B. Gupta, —Theory and Performance of Electrical Machines, S. K. Kataria and Sons, New Delhi, 14th Edition, 2010.
2. Vincent Del Toro, 'Basic Electric Machines' Pearson India Education, 2016

Course Outcomes:

On successful completion of the module students will be able to:

- Describe the basic concepts of electromechanical energy conservation, operation and characteristics of dc generator.
- Discuss about the concept, operation and characteristics of DC Motor.
- Explain the operation and characteristics of single phase transformers.
- Illustrate the operation and outline the different types of connections in three phase transformers.
- Interpret the efficiency, characteristics of Transformers and DC machines by conducting Suitable tests.

EEPCCT-203	Electronic Devices	3L:0T:0P	3 Credits
------------	--------------------	----------	-----------

Course Objectives:

- To provide a comprehensive understanding of semiconductor materials and construction and working of PN junction diodes with its characteristics.
- To provide a comprehensive understanding of construction, operating principle and characteristics of bipolar junction transistors (BJTs)

- *To explore the construction and fabrication of field-effect transistors (FETs).*
- *To examine the construction, operating principle of various electronics switching devices – SCS, SCR, TRIAC, DIAC, GTO, and schokkely diode with its characteristics.*
- *To discuss the construction and operating principle of special semiconductor devices*

MODULE I - SEMICONDUCTOR THEORY AND DIODES

9 Hours

Introduction to Semiconductor materials – Energy band structure of insulators, conductors and semiconductors – intrinsic and extrinsic semiconductors – Construction of PN Diode – forward and reverse bias operation – mathematical model of a PN diode – Effects of temperature on diode operation – Static and dynamic resistances – Transition and diffusion capacitances – Zener diode and its characteristics- Applications of diodes.

MODULE II - BIPOLAR JUNCTION TRANSISTORS

9 Hours

Construction and operation – NPN and PNP transistors – CB, CE and CC configurations – Transistor characteristics and regions of operation – Biasing of BJTs– DC load line characteristics – Operating point – stabilization – Biasing circuits – Bias compensation techniques

MODULE III - FIELD EFFECT TRANSISTORS

9 Hours

Comparison between JFET and BJT, JFET – Construction – drain and transfer characteristics – Shockley's equation — MOSFET –characteristics of Enhancement and Depletion modes. – Biasing of FETs -Comparison of MOSFET with JFET

MODULE IV - POWER DEVICES

9 Hours

Construction, principle of operation and characteristics of Power Diode – Shockley diode – SCR – SCS – GTO– DIAC – TRIAC – UJT

MODULE V - SPECIAL SEMICONDUCTOR DEVICES

9 Hours

Metal-Semiconductor Junction -Schottky barrier diode - MESFET, FINFET, PINFET, CNTFET, DUAL GATE MOSFET.

Text Books:

1. J. Millman, C. Halkias and S. Jit, Electronic Devices and Circuits, Tata McGrawHill, 4th edition, 2015
2. Robert L. Boylestad and Louis Nashelsky, “Electronic Devices and Circuit Theory”, Prentice-Hall India, 2015.

3. Donald Neamen , Dhrubes Biswas "Semiconductor Physics and Devices" McGraw-Hill Education, 4th edition, 2021.

Reference books:

1. Allen Mottershed, "Electronic Devices and Circuits: An Introduction", PHI Learning 2011.
2. Ben G Streetman, "Solid-state electronic devices", Prentice Hall of India, 6th edition, 2008.
3. Theodore. F. Boghert, 'Electronic Devices & Circuits', Pearson Education, 6th Edition, 2003.
Ben G. Streetman and Sanjay Banerjee, 'Solid State Electronic Devices', Pearson Education, 2002 / PHI.

Course outcomes:

At the end of this course students will demonstrate the ability to

- Classify the semiconductor materials and describe the construction and working of PN junction diodes with its characteristics.
- Discuss the construction, operating principle and characteristics of transistors.
- Discuss the construction, operating principle of Field effect transistor devices with its V-I Characteristics curves.
- Discuss the construction, operating principle of various electronics switching devices – SCS, SCR, TRIAC, DIAC, GTO, and schokkely diode with its characteristics.
- Discuss the construction and operating principle of special semiconductor devices

EEPCCT-204	Electromagnetic Field Theory	3L:0T:0P	3 Credits
------------	------------------------------	----------	-----------

Course objectives:

- *To impart knowledge on the basics of static electric and magnetic field and the associated laws.*
- *To demonstrates the unification of electrostatic and magneto-static fields as a time varying electromagnetic fields.*
- *To make the students deep understanding of EM waves and the propagation of EM waves.*
- *To make the students understand and work out problems of steady magnetic fields and Electromagnetic wave equation*

MODULE I - ELECTROSTATIC FIELDS

9 Hours

Introduction- Coulomb's law – Electric field intensity – electric fields due to point line, surface and volume charge distributions – Electric flux density – Gauss law – Applications of Gauss'Law –

Divergence – Maxwell's first equation Divergence theorem- Electric potential –Potential field - Potential gradient –Field due to dipoles– dipole moment– Energy density.

MODULE II - ELECTRIC FIELDS

9 Hours

Current and current density– Continuity of current – Conductor properties and Nature of Dielectrics– Boundary conditions–Capacitance–Capacitance of system of conductors– Polarization in dielectrics – Dielectric constant and Dielectric strength - Energy stored in capacitor - Poisson's and Laplace equations–Electrostatic applications in Van de Graff generator and Xerography.

MODULE III - MAGNETIC FIELDS

9 Hours

Introduction– Biot- Savart Law–Ampere's Circuital Law–Applications–Curl and Stoke's theorem – Magnetic flux and Magnetic flux density – The Scalar and Vector magnetic potentials– Force on a moving charge and current elements– Force and Torque on closed circuit.

MODULE IV - MAGNETIC MATERIALS, CONCEPTS AND APPLICATIONS

9 Hours

Introduction to magnetic materials – Magnetization and Permeability – Magnetic boundary conditions – Magnetic circuit–Potential energy and forces on Magnetic materials–Inductance and mutual inductance–Inductance of solenoids, toroids, and transmission lines–Faraday's Law – Time varying magnetic field. Application of Magnetic field in Induction heating and Magnet plane.

MODULE V - ELECTROMAGNETIC WAVE PROPAGATION

9 Hours

Conduction current and Displacement current – Maxwell's equation in point and integral forms, Power and the Poynting Vector – Wave propagation in free space– Wave propagation in Dielectrics— Propagation in good conductors.

Total No. of Hours: 45

Text Books:

1. David K. Cheng, —Field and Wave Electromagnetics, Second Edition, Pearson Education, Asia, 2008.
2. Edward C. Jordan and Keith G. Balmain, —Electromagnetic waves and radiating systems, PHI Learning, 2nd Edition, 2007.
3. William H Hayt, —Engineering Electromagnetics, McGraw Hill, 5th Edition, 2008.

Reference Books:

1. N. Narayana Rao, "Elements of Engg. Electro Magnetics", Prentice Hall of India, 6th Edition, 2008
2. Sadiku MH, —Principles of Electromagnetics, Oxford University Press Inc, New Delhi, 2009

Course Outcomes:

On successful completion of the module students will be able to:

- Apply fundamental knowledge of mathematics, science and engineering to understand and analyze electrostatic field and its theorems.
- Identify, formulate, and solve engineering problems like Electric Flux Density, Dipole Moment and Magnetic Fields.
- Design and analyze Electromagnetic Induction and Electromagnetic Waves.

EEPCCT-205	Digital Electronics	3L: 0T:0 P	3 Credits
-------------------	----------------------------	-------------------	------------------

Course Objectives:

- *To understand the student to digital fundamentals.*
- *To understand the fundamental concepts to build any combinational circuit with logic gates and exclusively using universal gates.*
- *To understand the concepts of Sequential logic circuits.*
- *To understand the sequential circuits, emphasize is given to the variety of counter circuits both under synchronous.*
- *To understand the Asynchronous sequential logic circuits.*

MODULE I - NUMBER SYSTEM AND LOGIC FAMILIES**9 Hours**

Review of number systems, binary codes, error detection and correction codes. Digital Logic Families – Introduction to RTL, DTL, TTL, ECL and MOSL families – wired and operation, characteristics of digital logic family – comparison of different logic families.

MODULE II - COMBINATIONAL LOGIC**9 Hours**

Representation of logic functions – SOP and POS forms, K-map representations – minimization using K-maps- simplification and implementation of combinational logic – multiplexers and demultiplexers – code converters, adders, subtractors.

MODULE III - SEQUENTIAL LOGIC**9 Hours**

SR, JK, D and T flip-flops – level triggering and edge triggering – counters – Pulse forming circuits - asynchronous and synchronous type – Modulo counters – Shift registers – Ring counters.

MODULE IV - SYNCHRONOUS SEQUENTIAL LOGIC CIRCUITS**9 Hours**

State table and excitation tables - state diagrams - Moore and Mealy models - design of counters - analysis of synchronous sequential logic circuits - state reduction and state assignment.

MODULE V - ASYNCHRONOUS SEQUENTIAL LOGIC CIRCUITS**9 Hours**

Transition table, flow table – race conditions – circuits with latches, analysis of asynchronous sequential logic circuits – implication table – hazards.

Text Books:

1. Morris Mano.M, 'Digital Logic and Computer Design', Prentice Hall of India, 3rd Edition, 2005.
2. Donald D. Givone, 'Digital Principles and Design', Tata McGraw Hill, 1st Edition, 2003.
3. Thomas L Floyd, 'Digital fundamentals', Pearson Education Limited, 11th Edition, 2015.

Reference Books:

1. Tocci R.J., Neal S. Widmer, 'Digital Systems: Principles and Applications', Pearson Education Asia, 2014.
2. Donald P Leach, Albert Paul Malvino, Goutam Sha, 'Digital Principles and Applications', Tata McGraw Hill, 7th Edition, 2010.

Course Outcomes:

Upon completion of the course, the student will be able to

- Interpret, convert and represent different number systems.
- Manipulate and examine Boolean algebra, logic operations, Boolean functions and their simplification.
- Design and analyze combinational and sequential logic circuits.

EEPCCP-206	Electronic Devices Lab	0L:0T:2P	1 Credit
-------------------	-------------------------------	-----------------	-----------------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

- *Develop practical skills in electronics through hands-on laboratory work and experiments*
- *To plot the V-I characteristics of PN junction diodes, Transistors, FET, SCR, TRIAC & UJT*
- *To construct the biasing circuits of Transistors and rectifier circuits and analyzing its performance*

List of Experiments:

1. Obtain the V-I characteristics of PN junction diode and determine its static, dynamic resistance and Impedance.

2. Determine the VI characteristics of zener diode.
3. Determine the input and output characteristics of BJT and identify cut-off, active and saturation region for CB configurations.
4. Determine the input and output characteristics of BJT and identify cut-off, active and saturation region for CE configurations.
5. Obtain the transfer and drain characteristics of JFET and determine their drain resistance, mutual conductance.
6. Obtain the transfer and drain characteristics of MOSFET and determine their drain resistance, mutual conductance.
7. Determine the characteristics of SCR
8. Determine the characteristics of TRIAC
9. Determination of intrinsic stand-off ratio of UJT.
10. Design of half wave, full wave rectifier circuits with and without filters and determine the ripple factor.
11. Design of self-bias and fixed bias circuits using transistor and compare their performance.

Course Outcomes:

- Proficient in using basic electronic measurement instruments such as multimeters, oscilloscopes, and function generators. They should be able to measure voltage, current, frequency, and other relevant parameters accurately
- Analyze the V-I characteristics of diodes, transistors,
- Analyze the V-I characteristics of SCR, TRIAC and UJT
- Implement the application of diode by constructing the rectifiers with and without filters
- Design self-bias and fixed bias circuits using transistor

EEPCCP-207	DC Machines & Transformers Laboratory	0L: 0T:2 P	1 Credit
------------	---------------------------------------	------------	----------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

- *To determine the internal and external characteristics of the given DC generators from the test data*
- *To determine or predetermine the performance characteristics of the given DC motors from the test data.*
- *To determine or predetermine the regulation and efficiency of the single phase transformers from the test data*
- *To determine the regulation and efficiency of the three phase transformers from the test data*

- *To understand the parallel operation and load sharing of single phase transformers.*

DC MACHINES

1. Load test on DC shunt Motor
2. Load test on DC series Motor
3. Load test on DC Compound Motor
4. Open Circuit Characteristics of self-excited DC shunt Generator
5. Load test on self-excited DC shunt Generator
6. Open Circuit Characteristics of separately excited DC shunt Generator
7. Load test on separately excited DC shunt Generator
8. Load test on DC series Generator
9. Swinburne's Test
10. Hopkinson's test on DC Machines
11. Study on Retardation test and Speed control of DC Motors.

TRANSFORMERS

12. Load test on single phase transformer
13. O.C and S.C test on single phase transformer
14. Load test on three phase transformer
15. Parallel operation of single phase transformers
16. Sumpner's test on single phase transformers
17. Study of three phase transformer connections

Course Outcomes

On successful completion of the module students will be able to:

- Analyze the performance of any DC machine (shunt, series or compound) and transformer by conducting suitable experiments and report the results.
- Predetermine the different performance characteristics of DC machines and transformers.
- Analyze the various speed control techniques for DC motors.
- Experiment the parallel operation and analyze the load sharing of single phase transformers.

EEPCCP-208	Digital Electronics Laboratory	0L: 0T:2 P	1 Credit
------------	--------------------------------	------------	----------

Course Objectives:

- *To represent logical functions in canonical and standard forms.*
- *To design and analyse the combinational logic circuits.*
- *To design and analyse the sequential logic circuits.*
- *To implement combinational and sequential logic circuits using Verilog HDL.*

List of Experiments:

1. Design and implementation of the following Code convertors
 - a. BCD to excess-3 code and vice versa
 - b. Binary to gray code and vice-versa
2. Design and implementation of 4 bit binary Adder/ Subtractor and BCD adder using IC7483
3. Magnitude comparator
 - a. Study of 4-bit magnitude comparator IC
 - b. Realization of 8-bit magnitude comparator using 4-bit magnitude comparator ICs.
4. Multiplexers and Encoders
 - a. Realization of 16×1 multiplexer using 8×1 multiplexer ICs
 - b. Realization of a combinational circuit using multiplexer
 - c. Construction and study of a simple Priority Encoder
5. Decoders and Demultiplexers
 - a. Realization of 4 to 16 line decoder using 3 to 8 line decoder ICs
 - b. Realization of a combinational circuit using a decoder IC
6. Shift register
 - a. Construction of ring counter and Johnson counter using a shift register IC and study of their timing diagrams
 - b. Designing a PN Sequence Generator using a shift register IC
7. Ripple Counters and their timing diagrams
 - a. 3-bit binary up/down counter
 - b. BCD counter using mod-10 counter ICs
8. Design and implementation of Synchronous Counters and study of their timing diagrams
 - a. Binary counter
 - b. Non-sequential binary counter
 - c. 3-bit binary up/down counter
 - d. A modulo-N-counter
9. Study of a Memory IC

- a. READ and WRITE operations involving memory chips
- b. Expansion of memory size

10. Simulate the following circuits:

- a. Half Adder and Full Adder
- b. Multiplexer and DeMultiplexer
- c. Binary Up-down Counter
- d. Shift Register

Course Outcomes:

At the end of the course the student should be able to

- Understand the number systems and IC characteristics
- Understand the Boolean algebra and its properties
- Design and analyze the combinational and Sequential logic circuits.

AU-203	Indian Constitution & Knowledge Systems	0L:1T:0P	No Credits
---------------	--	-----------------	-------------------

Course Objectives:

- *To recognize ones fundamental duties and rights*
- *To understand the structure and functions of legislature, executive and judiciary*
- *To understand the functioning of state governments and union territories*
- *To understand the centre-state relations and functioning of constitutional bodies*

MODULE I - INTRODUCTION OF INDIAN CONSTITUTION AND DEMOCRACY 9 Hours

Overview of Democracy - The Making of Indian Constitution - The Constituent Assembly - Sources of Indian Constitution - Preamble and the Supreme Court's Judgments on Preamble.

State, Rights and Duties: State and Union Territories – Citizenship - Fundamental Rights - Directive Principles of State Policy - Fundamental Duties.

MODULE II- UNION GOVERNMENT

9 Hours

Union Government - The Powers and Functions of the President, Vice-President, Council of Ministers, Prime Minister, Judiciary, Supreme Court - Judicial Review - Judicial Activism- Public Interest Litigation - Power and Functions of the Parliament - Budget Power and Functions of Parliament, Speaker of Lok Sabha.

MODULE III - STATE GOVERNMENTS

9 Hours

State Governments – Governor - State Council of Ministers - Chief Minister- Legislative Assembly-

High Courts; Union Territories - Panchayati Raj Institutions - 73th and 74th Constitutional Amendment - Gram Panchayats ;Block Panchayats - Municipalities.

MODULE IV - UNION- STATE RELATIONS, CONSTITUTIONAL BODIES 9 Hours

Centre – State Relations - Public Service - Election Commission - NITI Ayog, Emergency Powers of the President- Constitution Amendment Procedure- Right to Information Act - Right to Education. Major Constitutional Amendments and their impact on Indian Political System

MODULE V - INDIAN TRADITIONAL VALUES 9 Hours

Basic structure of Indian knowledge system, Modern science and Indian knowledge system, Yoga and holistic Health care. Philosophical tradition, Indian linguistic tradition, Indian artistic tradition.

Total No. of Hours: 45

Text Books:

1. N. Sivaramakrishnan (Ed.) Culteral Heritage of India – Course Materal, BharatiyaVidyaBhavan, Mumbai,5th edition, 2014.
2. Swami Jitatmanand,” Modern Physics and Vedanta”, BharatiyaVidyaBhavan,2012

Reference Books:

1. Fritzof Capra, “Tao of Physics”,2019
2. Yoga Sutra of Patanjali, Ramakrishna Mission, Kolkatta.
3. R.N. Jha, “Science of Conciousness Psychotherapy and yoga Practices”, VidyaniidhiPrakashan, Delhi 2016.

Course Outcomes:

The course will enable the student to:

- Understand the structure, duties and functions of legislature, executive and judiciary
- Understand the functioning of state governments and union territories
- Understand the centre-state relations and functioning of constitutional bodies
- Understand connect up and explain basics of Indian traditional knowledge in modern scientificperspective.
- Under the Basic structure of Indian knowledge system.

SEMESTER – IV

HSMC-203	Industrial Economics and Management	3L:0T:0P	3 Credits
-----------------	--	-----------------	------------------

Course objectives:

- *To inculcate the students with the Knowledge and Understanding of the Concept of Economics*
- *To enable the students to gain valuable insight in to the working of business.*
- *The course will review the evolution of management thoughts, functions and practices through the focus on Indian experiences, approaches and cases.*
- *After undergoing this course student will get clear idea about Financial Management.*
- *Also they can be a member of Directing and Controlling in an organization.*

MODULE I - INTRODUCTION TO ECONOMICS

9 Hours

Overview of Economy – GDP - Flow in an Economy, Law of Demand and Supply, Concept of Engineering Economics–Engineering Efficiency, Economic Efficiency, Scope of Engineering Economics, Elements of Costs, Marginal Cost, Marginal Revenue, Sunk Cost, Opportunity cost, Break-Even Analysis, P/V ratio, Elementary Economics Analysis–Structure of Market, Pricing and its related factors.

MODULE II - FUNCTIONS OF MANAGEMENT

9 Hours

Overview of Management: Definition –Nature and scope of management- Importance - skills of managers–Levels of Management- Principles of Henry Fayol.

Planning: Definition -Nature and purpose – Planning process – Importance of planning – types of planning- Decision making - Definition –steps and process and various types of decisions

MODULE III – ORGANIZATION

9 Hours

Definition -Types of organization – Organizational structure –Span of control – use of staff and committees. Delegation: Delegation and Centralization. Centralization and Decentralization.

MODULE IV - FINANCIAL MANAGEMENT

9 Hours

Sources of finance (Internal and External)-Types of capital-Working capital-Types of investment-Preparation of Trading, Profit and Loss Account and Balance Sheet- Types of Accounting and significance of each types.

MODULE V – DIRECTING AND CONTROLLING

9 Hours

Definition -Nature and purpose of Directing - Principles – Motivation - Definition - Theories of Motivation, Leadership: Definition- Styles – Communication: Definition - Importance of Communication – Methods of Communication – Types – Barriers

Meaning and importance of controlling–control process–Requisites of an effective control system– Relationship between planning and controlling

Text books:

1. Panner Selvam.R. “Engineering Economics”, Prentice-Hall of India Pvt. Ltd, New Delhi, Feb-2013.
2. P.C.Tripathi & P.N.Reddy, “Principles of Managements”,Tata Mc.GrawHill-NewDelhi,2012
3. Harold Koontz and Heinz Weihrich,” Essentials of Management: An International, Innovation and Leadership Perspective”, Tata McGraw-Hill Education, 10th Edition, 2015.

Reference books:

1. Degaramo E.P., Sullivan W.G and Canada J.R., “Engineering Economy” Macmillan,Newyork.
2. Peter Eichhorn & Ian Towers,” Principles of Management: Efficiency and Effectiveness in the Private and Public Sector”, Springer International Publishing. 2018

Course Outcomes:

On the successful completion of the course, student will be able to:

- Examine and explain the management evolution and how it will affect future managers.
- Estimate the conceptual framework of planning and decision-making in day to day life.
- Explain the various managerial functions to achieve the goals and objectives of the organization.
- Analyze the theories of motivation, leadership and communication in a variety of circumstances and management practices in organizations.
- An ability to understanding of professional and ethical responsibility.

EEPCCT-209	AC Machines	3L: 0T:0 P	3 Credits
-------------------	--------------------	-------------------	------------------

Course Objectives

- *To equip the students to understand and analyze the characteristics of three phase induction motor.*
- *To learn different types of starters and speed control of three phase induction motor.*
- *To equip the students to understand and analyze the characteristics of alternator.*
- *To learn characteristics of synchronous motor and effect of varying load and excitation.*
- *To get familiar with performance characteristics of single phase induction motors and special machines.*

MODULE I - INDUCTION MOTOR

9 Hours

Single phase Induction Motors: Construction – Principle of operation - Double revolving field theory - Torque-speed characteristics – starting methods – Applications.

Three phase Induction Motors: Construction – principle of operation – Types - Effect of slip on rotor parameters – Torque equation - phasor diagram - torque slip characteristics - Power Stages - equivalent circuit – no load and blocked rotor test - circle diagram - Losses and efficiency – Applications.

MODULE II - STARTING AND SPEED CONTROL OF THREE PHASE INDUCTION MOTOR

9 Hours

Starters: Need for starters – Starting methods. Speed control: Stator side – Rotor side – Solid state control. Cogging and Crawling - Electric Braking - deep bar and double cage rotor – Synchronous induction motor – Induction generator – Applications.

MODULE III – ALTERNATORS

9 Hours

Construction – operation – Types of rotors – EMF equation – Synchronous reactance – Armature reaction - Alternator on load – phasor diagram. Voltage regulation: EMF, MMF, ZPF. Synchronizing and parallel operation – effect of change of excitation and prime mover inputs – automatic voltage regulators – Two reaction theory of Salient pole machines – slip test - power angle diagram – Applications.

MODULE IV - SYNCHRONOUS MOTOR

9 Hours

Construction - principle of operation - starting methods - Torque and power equations - speed control – phasor diagram – effect of varying load and excitation - ‘V’ and inverted ‘V’ curves - hunting – synchronous condenser – Applications.

MODULE V - SPECIAL MACHINES

9 Hours

Stepper motors - Reluctance motor - Hysteresis motor– Servo motor– Linear induction motor– AC series motor - switched reluctance motor – overview of Brushless DC motors and its applications – PMSM – Applications.

Total No. Of Hours: 45

Text Books:

1. E. Fitzgerald, Charles Kingsley, Stephen. D. Umans, “Electric Machinery”, Tata McGraw Hill, New Delhi, 7th Edition, 2017.
2. B. L. Theraja and A. K. Theraja, —A Textbook of Electrical Technology-Vol. II, S. Chand & Co. Ltd., New Delhi, 23rd Multicolor Edition, 2016.
3. J. Nagrath and D.P. Kothari, “Electric machines” T.M.H. publishing Co.Ltd., New Delhi, 5th Edition, 2017

Reference Books:

1. Battacharya S K, “Electrical Machines”, Technical Teachers Training institute”, 2nd Edition.2003.
2. P.C.Sen,”Principles of Electric Machines and Power Electronics, Wiley Student Edition, 2nd Edition, 2008.

Course Outcomes:

On successful completion of the module students will be able to:

- Evaluate and analyze the performance of three phase induction motor using equivalent circuits and circle diagram.
- Apply suitable starting and speed control methods to enhance the performance of three phase induction motors.
- Analyze the performance characteristics of alternator and compute voltage regulation with different methods.
- Analyze the characteristics of synchronous motor and its performance with effect of varying load and excitation.
- Recognize the characteristics of single phase induction motors and special machines as well as choose an appropriate motor for any industrial application.

EEPCCT-210	Analog Electronic Circuits	3L:0T:0P	3 Credits
-------------------	-----------------------------------	-----------------	------------------

Course Objectives:

- To impart knowledge on frequency response of small signal and large signal amplifiers.
- To explore the working of amplifiers with positive and negative feedback systems.
- To familiarize in time base and sweep circuits.
- To impart the importance of multi stage amplifier.
- To introduce stable operating point for BJT on various classes of power amplifiers.

MODULE I - SMALL SIGNAL AMPLIFIERS

9 Hours

Introduction - Transistor hybrid model and h-parameters – Determination of h-parameters from transistor characteristics – Analysis of CB, CE and CC circuits using h-parameter model – Comparison of CB, CE and CC circuits – CE amplifier with unbiased emitter resistance – Transistor Re model – Small signal equivalent model – High frequency transistor model – Low frequency FET model.

MODULE II - LARGE SIGNAL AMPLIFIERS

9 Hours

Classification of Power amplifiers – Class A power amplifier – Direct coupled and transformer coupled – Class B amplifier – push-pull arrangement and complementary symmetry amplifiers – Conversion efficiency calculations – cross-over distortion – Class AB amplifier – Amplifier distortion – Power transistor heat sinking – Class C, Class D, Class E and Class S amplifiers.

MODULE III - MULTISTAGE AMPLIFIERS AND TIME BASE CIRCUIT

9 Hours

Cascading amplifier – Direct and RC coupled two stage CE amplifiers – Darlington pair – Cascode amplifier – Tuned amplifier: Single tuned – Double tuned – Stagger tuned amplifiers; Schmitt trigger and Multivibrators circuits: using BJT – UJT sweep circuits – Voltage and current sawtooth sweeps – Fixed amplitude sweep – Miller and bootstrap time base.

MODULE IV - FEEDBACK AMPLIFIERS

9 Hours

Feedback concept – Gain with feedback – General characteristics of negative feedback amplifiers – Four basic types of feedback and the effect on gain, input and output resistances – Multistage feedback amplifiers.

MODULE V - OSCILLATORS

9 Hours

Conditions for sustained oscillations – Barkhausen criterion – RC Phase shift, Wein-bridge oscillators – LC oscillators – Analysis of Hartley, Colpitts, Tuned oscillators – Crystal oscillators and frequency stability – UJT relaxation oscillators.

Total No of Hrs :45

Text Books:

1. David A. Bell, "Electronic devices and circuits", Oxford University higher education, 5th Edition, 2008.
2. Muhammad H. Rashid, "Microelectronic Circuits: Analysis & Design", Cengage learning Inc, 2nd Edition, 2011.
3. G.S. Tomar, Ashish Bagwari, "Fundamentals of Electronic Devices and Circuits", Springer Nature, 2019.

Reference Books:

1. Robert L. Boylestad and Louis Nashelsky, "Electronic Devices & Circuit theory" Pearson Education, 9th Edition, 2007.
2. R. S. Sedha, "A textbook of Applied Electronics", S. Chand Publications, Multicolor Edition, 2019

Course Outcomes:

After completion of the course, the students will be able to

- Design the transistor Amplifiers using its small signal model.
- Design cascade amplifiers and sweep circuits.
- Evaluate the performance analysis of large signal amplifier.
- Design the feedback amplifiers and analyze frequency response.
- Design oscillators for different types of signal generation.

EEPCCT-211	Transmission & Distribution Systems	3L: 0T:0 P	3 Credits
------------	-------------------------------------	------------	-----------

Course Objectives:

- *To provide the structure of the electrical power system with various types of A.C/D.C Transmission and distribution systems*
- *To explain about the classification of transmission lines and their technical parameters.*
- *To understand the concept of transmission line models and its performance.*
- *To understand the necessity and importance of various insulators and cables used in power system.*
- *To have an overview of the modern electrification schemes and recent technologies in Transmission and Distribution systems.*

MODULE I - DISTRIBUTION SYSTEMS

9 Hours

Structure of electric power systems - Single Line Diagram of Generation, Transmission and Distribution Systems – capacity and types of distribution system -Comparison of distribution systems – Radial and Ring main – DC two wire, AC single phase and three phase systems – Selection of Feeders and Distributors – secondary distribution system - Kelvin's law and its limitations.

MODULE II - LINE PARAMETERS AND EFFECTS ON TRANSMISSION SYSTEMS

9 Hours

Resistance, inductance and capacitance of single and three phase transmission lines - symmetrical and unsymmetrical spacing – transposition - single and double circuits - stranded and bundled conductors - application of self and mutual GMD–Skin, Proximity and Corona effect - inductive and radio interference - Computation of line parameters.

MODULE III - PERFORMANCE ANALYSIS ON TRANSMISSION SYSTEMS 9 Hours

Development of equivalent circuits for short, medium and long lines – Calculation of efficiency and voltage regulation – Tuned power lines - Power circle diagrams for sending and receiving ends - transmission capacity, steady state stability limit –voltage control of lines.

MODULE IV - INSULATORS AND CABLES FOR DISTRIBUTION SYSTEMS 9 Hours

Insulators: types and comparison – voltage distribution in string insulator – string efficiency – Methods of improving string efficiency – Stress and sag calculations – effect of wind and ice – supports at different levels. Cables: types – capacitance of cables – insulation resistance - dielectric stress and grading - dielectric loss -thermal characteristics - capacitance of three core cables.

MODULE V - RECENT TRENDS IN TRANSMISSION AND DISTRIBUTION 9 Hours

Design of Rural distribution, planning and design of town electrification schemes – Need for power system interconnections systems – Components of a HVDC system - Types of DC links - Modern trends in DC Transmission systems – Comparison of HVDC and HVAC Transmission systems – Introduction to FACTS - FACTS controllers – Shunt and Series – Grounding methods in power stations.

Total no of Hours: 45

Text Books:

1. S .N .Singh, 'Electric Power Generation, Transmission and Distribution', Prentice Hall of India Pvt. Ltd, New Delhi, 2nd Edition, 2011.
2. V. K. Metha and Rohit Metha, "Principles of Power System", S. Chand, 3rd Edition, 2005.
3. C. L. Wadhwa, Electrical Power Systems, 5th Edition, New Age International (P) Limited, New Delhi, 2006.

Reference Books:

1. R .Padiyar, "HVDC Power Transmission Systems – Technology and System Interactions", New Age

International Publishers, 2012

2. B. L. Theraja and A. K. Theraja, —A Textbook of Electrical Technology-Vol. III, S. Chand & Co. Ltd., New Delhi, 23rd Multicolor Edition, 2016.

Course Outcomes:

After completion of the course, the students will be able to

- Summarize the structure of Generation, Transmission and Distribution with real time connection schemes.
- Calculate the line parameters in the transmission system and their effects in the overhead lines.
- Analyze on different types of transmission lines (short, medium, long) and its performance.
- Choose the adaptable types of insulators and cables for transmission and distribution systems.
- Compare various schemes of electrification and gain knowledge on High Voltage AC / DC systems

EEPCCT-212	Control Systems	2L:1T:0P	3 Credits
------------	-----------------	----------	-----------

Course Objectives:

- *To explain the use of transfer function models for analysis of physical systems*
- *To explain various control system components*
- *To provide basic knowledge about time response of systems and steady state error analysis*
- *To introduce the concepts and applications of P, PI and PID controllers*
- *To teach how to obtain open-loop and closed-loop frequency responses*
- *To introduce stability analysis and design of compensators*
- *To introduce state variable representation of physical systems and state feedback*

MODULE I - CONTROL SYSTEMS AND THEIR REPRESENTATION 9 Hours

Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Synchros – AC and DC servomotors – Block diagram reduction techniques – Signal flow graphs.

MODULE II - TIME RESPONSE ANALYSIS 9 Hours

Time response – Time domain specifications – Types of test input – I and II order system response – Error coefficients – Generalized error series – Steady state error – Root locus construction- Effects of P, PI, PID modes of feedback control –Time response analysis.

MODULE III - FREQUENCY RESPONSE ANALYSIS 9 Hours

Frequency response – Bode plot – Polar plot – Determination of closed loop response from open

loop response - Correlation between frequency domain and time domain specifications- Effect of Lag, lead and lag-lead compensation on frequency response- Lag/Lead compensator design using bode plots.

MODULE IV - STABILITY ANALYSIS

9 Hours

Concept of stability of LTI systems–Routh and Hurwitz stability criteria–relative stability analysis using Routh’s stability criterion– Root locus concepts – Construction of root loci Stability analysis in frequency domain – Nyquist stability criterion– Relative stability analysis using phase margin and gain margin specifications

MODULE V - STATE SPACE ANALYSIS OF LTI SYSTEMS

9 Hours

Concept of state variables – State models for linear and time invariant Systems – Solution of state and output equation in controllable canonical form – Concepts of controllability and observability – Effect of state feedback.

Total No. of Hours: 45

Text Books:

1. Katsuhiko Ogata, “Modern Control Engineering”, Pearson, 2015.
2. Benjamin C. Kuo, “Automatic Control Systems”, Wiley, 2014.
3. Nagarath, I.J. and Gopal, M., “Control Systems Engineering”, New Age International Publishers, 2017.

Reference Books:

1. Norman S. Nise, “Control System Engineering”, 4th edition, Wiley Student Edition, 2008
2. Richard C. Dorf and Bishop, R.H., “Modern Control Systems”, Pearson Education, 2009.

Course Outcomes:

At the end of this course students will be able to

- Understand the basic concepts of modeling of dynamical control systems in transfer function approach.
- Able to deduce the analogy between mechanical and electrical systems and to infer how first order and second order dynamical systems respond to standard test signals during transient and steady state conditions.
- Gain knowledge on how the locus of all possible closed-loop poles travel in s plane as a system parameter varies from 0 to ∞ .
- Understands the frequency response of LTI systems using polar and Bode plots.

- Understand the stability of dynamical systems using Routh-Hurwitz and Nyquist stability criteria and to study the performance indices of a system in frequency domain.
- Understand the concept of modeling a dynamic system directly in time domain using state-space approach and to solve the state equation to study the evolution of state variables with respect to time when subject to standard test signals.

EEPCCT-213	Electrical Safety and Quality Management	3L:0T:0P	3 Credits
-------------------	---	-----------------	------------------

Course Objectives:

This course will enable students to:

- *To familiarize the Indian Electricity Rules and Act related with electrical safety.*
- *To provide a knowledge about electrical shocks and safety precautions.*
- *To create awareness of the electrical safety associated with installation of electrical equipment.*
- *To analyze different Hazardous areas for electrical safety.*
- *To expose knowledge about necessity of safety policy and safety management.*

MODULE I - CONCEPTS AND STATUTORY REQUIREMENT

9 Hours

Objective and scope of electrical safety - National electrical Safety code - Statutory requirements – Indian Electricity (IE) acts related to electrical safety - Safety electrical one line diagram - International standards on electrical safety - safe limits of current and voltage - Grounding of electrical equipment of low voltage and high voltage systems - Safety policy - Electrical safety certificate requirement.

MODULE II - ELECTRICAL SHOCKS AND THEIR PREVENTION

9 Hours

Primary and secondary electrical shocks - Possibilities of getting electrical shock and its severity - Effects of electrical shock on human beings - Shocks due to flash/ Spark over's - Firing shock - Multi storied building - Prevention of shocks - Safety precautions - Safe guards for operators - Do's and Don'ts for safety in the use of domestic electrical appliances - Case studies on electrical causes of fire and explosion

MODULE III - SAFETY DURING INSTALLATION, TESTING AND COMMISSIONING, OPERATION AND MAINTENANCE

9 Hours

:Need for inspection and maintenance - Preliminary preparations - Field quality and safety - Personal protective equipment - Safe guards for operators - Safety equipment - Risks during installation of electrical plant and equipment - Effect of lightning current on installation and buildings - Safety aspects

during installation -Safety during installation of electrical rotating machines - Importance of earthing in installation– Agricultural pump installation

MODULE IV - HAZARDOUS ZONES

9 Hours

Primary and secondary hazards - Hazardous area classification and of electrical equipments (IS, NFPA, API and OSHA standards) - Explosive gas area classifications: Class I (Division 1) - Zone 0, Zone 1, zone 2 classified locations, Design Philosophy for Equipment and installations-Classification of equipment enclosure for various hazardous gases and vapors - flash hazard calculation and approach distances- calculating the required level of arc protection.

MODULE V - SAFETY MANAGEMENT OF ELECTRICAL SYSTEMS

9 Hours

Principles of Safety Management - Occupational safety and health administration standards - Safety organization - Safety auditing - Employee electrical safety teams - Electrical safety training to improve Quality management - Total quality control and management – Importance of high load factor - Causes of low power factor - Disadvantages of low power factor - Power factor improvement - Importance of P.F. improvement - Case studies of electrical workplace safety practices.

Total No. of Hours: 45

Text books:

1. John Cadick, Mary Capelli Schellpfeffer, Dennis Neitzel, Al Winfield, “Electrical Safety Handbook”, McGraw-Hill Education, 4th Edition, 2012.
2. S. Rao, Prof. H.L. Saluja, “Electrical safety, fire safety Engg and safety management”, Khanna Publishers. NewDelhi, 1988.
3. Mohamed A. El-Sharkawi, “Electric Safety: Practice and Standards”, CRC Press; 1st Edition, 2013.

Reference Books:

1. Rob Zachariason, “Electrical Safety”, Delmar Cengage Learning, 1st Edition, 2011.
2. Peter E. Sutherland, “Principles of Electrical Safety”, Wiley-IEEE Press; 1st Edition, 2014

Course Outcomes:

On successful completion of this course, the students will be able to,

- Describe the Indian Electricity (IE) acts and various rules for electrical safety.
- Expose safety measures to prevent electrical shock in handling of domestic electrical appliances.
- Evaluate the safety aspects during installation of plant and equipment.
- Describe the various hazardous area and application of electrical safety in various places.
- Acquire knowledge about importance of electrical safety training to improve quality management in electrical systems.

EEPCCP-214	AC Machines Laboratory	0L: 0T:2 P	1 Credit
------------	------------------------	------------	----------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

- *To equip the students to test and evaluate the performance of induction and synchronous machines by conducting appropriate experiments.*
- *To learn different methods to predetermine the characteristics of single phase and three phase induction motors*
- *To get familiar with different types of speed control of three phase induction motor.*
- *To understand the synchronization of three phase alternator with infinite bus bar.*
- *To learn the assembling of different types of AC machines.*

List of Experiments

1. Load test on single phase induction motor
2. Load test on three phase squirrel cage
3. Load test on three phase slip ring induction motors
4. No load and blocked rotor tests on three phase induction motor
5. Speed control of induction motor
 - (i). Stator voltage control
 - (ii). Rotor resistance control
6. Electrical Braking of Induction motor
 - (i). Dynamic Braking
 - (ii). Plugging
 - (iii). Regenerative Braking
7. Load test on induction generator
8. Load test on Single phase alternator
9. Load test on three-phase alternator
10. Voltage regulation of alternator (EMF, MMF, ZPF)
11. Slip test on three phase salient pole alternator.
12. Synchronization of three phase alternator with infinite bus bar.
13. V and inverted V curve of synchronous Motor.
14. Performance Characteristics of Universal Motor.

Course Outcomes:

After completion of the course, the students will be able to

- Test the performance of induction and synchronous machines by conducting suitable experiments and report the results.
- Predetermine the different performance characteristics of single phase and three phase induction motors.
- Analyze the speed control techniques and electrical braking of induction motor.
- Experiment the synchronization of alternators and analyze the power exchange with the grid.
- Develop any prototype modules implementing different control techniques in Induction and Synchronous machines for various applications.

EEPCCP-215	Electrical and Electronics Circuits Laboratory	0L: 0T:2 P	1 Credit
-------------------	---	-------------------	-----------------

Course objectives:

- To gain practical experience on electric circuits to measure various electrical parameters like current, voltage and power using various network theorems for DC and AC circuits
- To gain practical experience to evaluate the solution of three phases AC balanced and unbalanced circuits for star and delta connection.
- Analyzing and comparing the operations of different Oscillators
- Implementation of circuits experimentally based on the knowledge gained in Digital-to- analog converters

List of Experiments:

- 1 Simulation and experimental verification of electrical circuit problems using Kirchhoff's voltage and current laws.
- 2 Simulation and experimental verification of electrical circuit problems using Super position theorem Thevenin's theorem and Norton's theorem
- 3 Simulation and experimental verification of electrical circuit problems using Maximum Power Transfer theorem
- 4 Simulation and experimental verification of electrical circuit problems using Reciprocity theorem
- 5 Simulation and verification in between voltage and current in three phase balanced star and delta connected loads
- 6 Frequency response characteristics of RC coupled amplifier single stage.

- 7 Design and verification of RC phase shift oscillator.
- 8 Design and verification of UJT relaxation oscillator.
- 9 Design and verification of Astable /Monostable /Bistable Multivibrator.
- 10 Design and verification of Schmitt Trigger.
- 11 Design and characterization of Class A amplifier.

Course outcomes:

At the end of the course the student should be able to

- Verify the basic laws and simplify more complicated circuits into simple equivalent circuits using network theorems to compute various parameters of typical DC and AC electrical circuits.
- Evaluate the solution of three phase AC balanced and unbalanced circuits with different types of loads.
- Understanding the frequency response characteristics of small signal amplifiers.
- Analyzing the operation of power amplifiers with their characteristics.
- Knowledge to design and test the different types of oscillators for the generation of required frequency.

PRJ EE-201	Micro Project	0L:0T:2P	1 Credit
-------------------	----------------------	-----------------	-----------------

Micro Project

Guidelines: The micro-project is a team activity having 3-4 students in a team. This is electronic circuit building and testing for developing real life small electronic applications. The micro-project may be a complete hardware or hardware with small programming aspect. It should encompass electronics components, devices, analog or digital ICs, micro controller etc. Micro-Project should cater to a small system required in laboratory or real-life application. Based on comprehensive literature survey/ need analysis, the student shall identify the title and define the aim and objectives of Micro-project.

Course Outcomes:

At the end of the micro project, students will able to

- Identify and define a problem statement from the requirements raised from literature survey /need analysis
- Build and Test electronic circuits/prototype for developing real life small electronic applications.
- Work in teams; write comprehensive report and effective presentation of the project work.
- Understand the rapid prototyping which will lead them towards entrepreneurship.

Course Objectives:

- *To Identify different life skills required in personal and professional life*
- *To apply well-defined techniques to cope with emotions and stress.*
- *To understand the basic mechanics of effective communication and demonstrate these through presentations.*
- *To use appropriate thinking and problem solving techniques to solve new problems*
- *To understand the basics of teamwork and leadership*

MODULE I - OVERVIEW OF LIFE SKILLS**9 Hours**

Meaning and significance of life skills, Life skills identified by WHO: Self awareness, Empathy, Critical thinking, Creative thinking, Decision making, problem solving, Effective communication, interpersonal relationship, coping with stress, coping with emotion.

LIFE SKILLS FOR PROFESSIONALS: positive thinking, right attitude, attention to detail, having the big picture, learning skills, research skills, perseverance, setting goals and achieving them, helping others, leadership, motivation, self-motivation, and motivating others, personality development, IQ, EQ, and SQ.

MODULE II - SELF-AWARENESS**9 Hours**

Definition, need for self-awareness; Coping with Stress and Emotions, Human Values, tools and techniques of SA: questionnaires, journaling, reflective questions, meditation, mindfulness, psychometric tests, feedback.

Stress Management: Stress, reasons and effects, identifying stress, stress diaries, the four A's of stress management, techniques, **Approaches:** action-oriented, emotion-oriented, acceptance oriented, resilience, Gratitude Training, **Coping with emotions:** Identifying and managing emotions, harmful ways of dealing with emotions, PATH method and relaxation techniques. **Morals, Values and Ethics:** Integrity, Civic Virtue, Respect for Others, Living Peacefully. Caring, Sharing, Honesty, Courage, Valuing Time, Time management, Cooperation, Commitment, Empathy, Self-Confidence, Character, Spirituality, Avoiding Procrastination, Sense of Engineering Ethics.

MODULE III - 21ST CENTURY SKILLS**9 Hours**

Creativity, Critical Thinking, Collaboration, Problem Solving, Decision Making, Need for Creativity in the 21st century, Imagination, Intuition, Experience, Sources of Creativity, Lateral Thinking, Myths of creativity, Critical thinking Vs Creative thinking, Functions of Left Brain & Right brain, Convergent & Divergent Thinking, Critical reading & Multiple Intelligence.

Steps in problem solving: Problem Solving Techniques, Six Thinking Hats, Mind Mapping, Forced Connections. Analytical Thinking, Numeric, symbolic, and graphic reasoning. Scientific temperament and Logical thinking.

MODULE IV - GROUP AND TEAM DYNAMICS

9 Hours

Introduction to Groups: Composition, formation, Cycle, thinking, Clarifying expectations, Problem Solving, Consensus, Dynamics techniques, Group vs Team, Team Dynamics, Virtual Teams. Managing team performance and managing conflicts, Entrepreneurship.

MODULE V - LEADERSHIP

9 Hours

Leadership framework, entrepreneurial and moral leadership, vision, cultural dimensions. Growing as a leader, turnaround leadership, managing diverse stakeholders, crisis management. Types of Leadership, Traits, Styles, VUCA Leadership, Levels of Leadership, Transactional vs Transformational Leaders, Leadership Grid, Effective Leaders.

Total No. of Hours: 45

Text Books:

1. Kalyana, "Soft Skill for Managers"; Wiley Publishing Ltd, 1st Edition, 2015.
2. Larry James, "The First Book of Life Skills"; Embassy Books, 1st Edition, 2016

References books:

1. Remesh S., Vishnu R.G., "Life Skills for Engineers", Ridhima Publications, 1st Edition,, 2016.
2. Training in Interpersonal Skills: Tips for Managing People at Work, Pearson Education, India; 6th Edition, 2015.

Course Outcomes:

On the successful completion of the course, student will be able to:

- Define and Identify different life skills required in personal and professional life
- Develop an awareness of the self and apply well-defined techniques to cope with emotions and stress.
- Explain the basic mechanics of effective communication and demonstrate these through presentations and take part in group discussions.
- Use appropriate thinking and problem solving techniques to solve new problems.
- Understand the basics of teamwork and leadership

AU-204	Environmental Science	1L:0T:1P	No Credits
---------------	------------------------------	-----------------	-------------------

Course Objectives:

- *It is concerned with the exploration, investigation and development of an understanding of the natural, human and social dimensions of local and wider environments.*
- *It provides opportunities to engage in active learning, to use a wide range of skills, and to acquire open, critical and responsible attitudes.*
- *The objective of this activity is to raise awareness about sustainable living practices and encourage students to adopt eco-friendly habits in their daily lives.*

Course Contents:

MODULE I - ECO SYSTEM

6 Hours

Introduction- Abiotic and Biotic components, Structure and functions of Ecosystem – Food Chain, Food web, Ecological pyramids, Energy flow and biogeochemical cycles.

MODULE II - BIODIVERSITY

6 Hours

Values, Type and levels of Biodiversity. Causes of depletion. Conservation of biodiversity

MODULE III - POLLUTIONS

6 Hours

Water Pollution-Sources of water, water quality standards, type of pollutants – its sources and effects. **Air Pollution** – composition of atmosphere, Air quality standards, Sources and adverse effects of air pollution, Greenhouse effect, global warming, acid rain, ozone depletion.

Noise Pollution – Introduction, Level of noise, Sources and adverse effects of noise, Control of noise pollution.

MODULE IV - SOLID WASTE MANAGEMENT

6 Hours

Municipal waste – Introduction, classification of solid waste, composition and characteristics of solid waste

MODULE V

6 Hours

Activities for Environmental Studies in Engineering Colleges (any 2 activities)

1. **Green Campus Initiative:** Organize a campus-wide green initiative to promote sustainable practices, such as recycling, reducing energy consumption, and minimizing water wastage. Conduct workshops and awareness campaigns on campus to involve students and staff actively.
2. **Waste Audit and Management:** Conduct a waste audit on campus to analyze the types and quantities of waste generated. Based on the findings, implement effective waste management practices, including recycling programs and proper waste disposal.

3. **Environmental Impact Assessment:** Assign students real-life projects to conduct environmental impact assessments of construction projects or industrial facilities to identify potential environmental impacts and propose mitigation measures.
4. **Energy Efficiency Workshop:** Organize workshops and seminars on energy efficiency, renewable energy technologies, and energy conservation to educate students about sustainable energy practices.
5. **Green Design Competition:** Host a green design competition where students come up with sustainable engineering solutions for environmental challenges. Encourage innovative designs that promote sustainability and eco-friendliness.
6. **Nature Walk and Biodiversity Study:** Organize nature walks and biodiversity study trips to nearby natural areas. Students can learn about local ecosystems, wildlife, and the importance of conserving biodiversity.
7. **Sustainable Transportation Campaign:** Raise awareness about sustainable transportation options such as cycling, carpooling, and public transit. Encourage students to use these eco-friendly modes of transportation on campus.
8. **Water Conservation Challenges:** Run a water conservation challenge where students compete to reduce water usage in their hostels or departments. Monitor water consumption and reward the most water-conscious groups.
9. **Community Outreach Program:** Engage with the local community on environmental issues through outreach programs. Students can conduct workshops on waste management, renewable energy, or other eco-friendly practices.
10. **Green Tech Exhibition:** Organize a green technology exhibition to showcase sustainable engineering solutions and environmentally friendly projects developed by students. Invite industry experts and environmentalists to judge and provide feedback.

Total No. of Hours: 30

Text Books:

1. P.Yugananth, R.Kumaravelan, Environmental Science and Engineering, Scitech Publications(Inida) P.Ltd., Delhi, 2017.
2. John Pichtel, Waste Management Practices: Municipal, Hazardous and Industrial, CRC Press,2014.
3. S.S.Dara, A text book of Environmental Chemistry and Pollution Control, S.Chand andCompany Ltd., New Delhi, 2014

Reference Books:

1. V.S.K.V.Harish, Arunkumar, Green Building Energy Simulation and Modeling, Elsevier Science & Technology, 2018.
2. Anubha Kaushik and C.P.Kaushik, Environmental Science and Engineering, New Age International (P) Ltd., New Delhi, 2010.

Course Outcomes:

After completion of this course, students will be able to:

- Recognize the impact of environmental depletion especially on ecosystem and biodiversity
- Identify factors causing land, water, air and noise pollution
- Determine the effects of pollution
- Develop keen understanding of non conventional energy source, solid waste management and technologies for sustainable development
- Understand the environment legislations in India.

SEMESTER V

EEPCCT-316	Measurements and Instrumentation	3L:1T:0P	3 Credits
-------------------	---	-----------------	------------------

Course Objectives:

- *To give the students an insight into the constructional details and working principles of various measuring instruments.*
- *To provide the use of different types of analog and digital meters for measuring electrical and physical quantities.*
- *To demonstrate various Bridges for the measurement of resistance, inductance and capacitance.*
- *To provide the procedure to calibrate an energy meter.*

MODULE I - INTRODUCTION TO MEASUREMENTS

9 Hours

Functional elements of Generalized measurement system - Types of measurement - Classification of instruments - Static and Dynamic characteristics of instruments - Mean, Standard deviation - error - Accuracy, Precision, Sensitivity, Linearity, Resolution, Hysteresis, Threshold, Input impedance - loading effects - Probability of errors- Errors in Measurements - Systematic and random errors, propagation of errors, Limiting errors of instruments.

MODULE II - ELECTRICAL INSTRUMENTS

9 Hours

Essential requirements of an instrument - Ammeter and voltmeter - Moving coil - Moving Iron - Extension of voltmeter and ammeter range - Electro dynamo meter type Wattmeter - Induction type Energy meter - Principle of operation, construction, Torque equation, types, testing and Calibration using direct and phantom loading - Measurement of active and reactive powers in balanced and unbalanced systems - Instrument Transformers - Construction, phasor diagrams, testing, application of measuring CT and VT - Magnetic measurements – Determination of B-H curve and measurements of iron loss.

MODULE III - DIGITAL INSTRUMENTS

9 Hours

Digital Volt Meter and its design - Voltage ratio measurement techniques - Digital ohmmeter, capacitance meter - impedance meters (Polar and Cartesian types) - Decibel meters - Q meter - tan-delta meter - Modulation index meter - Sampling theory and its applications in current, voltage, power, energy measurements - Signal analyzers: wave, network, harmonic distortion, spectrum and logic

analyzers - Digital Frequency Meter - Measurement of Frequency - Study of Phasor Measurement Units (PMU).

MODULE IV - BRIDGES AND DISPLAY DEVICES

9 Hours

Bridges: Measurement of low and high resistances – D.C potentiometer - Wheat stone, Kelvin and Kelvin Double bridge - A.C bridges for measurement of L and C - General principles, sensitivity analysis, Maxwell, Anderson bridge, Hay, Owens and Heavy side Campbell bridges for inductance; Maxwell, De Sauty and Wein bridges for capacitance - Measurement of earth resistance - localization of cable faults by Murray and Varley loop test - Methods of reducing bridge errors - Wagner Earthing Device. Display Devices: CRT display, analog and digital CRO, LED, and LCD.

MODULE V - TRANSDUCERS

9 Hours

Transducers - Definition and classification - Linear Displacement: Resistive Potentiometers, strain gauge, LVDT, Capacitive Piezoelectric - Rotational Displacement: magnetic, stroboscope, gyroscope – Force: Strain gauge – Torque: Magneto strictive, strain gauge – Position: synchro Transmitter and receiver – speed: Magnetic and photo electric pickup transducer - Pressure: Manometers, Bourdon – Temperature: Thermistors, thermocouple – Flow: Electromagnetic, Ultrasonic – Level: DP cell, Ultrasonic – Density: Hydrometer - Voltage, current and power: Hall Effect transducer

Total No of Hours: 45

Text Books:

1. A.K. Sawhney, “A Course in Electrical & Electronic Measurements and Instrumentation”, Dhanpat Rai and Co., New Delhi, 19th Edition, 2015.
2. J. B. Gupta, “A Course in Electronic and Electrical Measurements”, S. K. Kataria & Sons, Delhi, 12th Edition, 2009.
3. E. O. Doebelin and D. N. Manik, “Measurement Systems – Applications and Design”, Tata McGraw Hill Education Pvt. Ltd., Special Indian Edition, 2007.

Reference Books:

1. David Bell, “Electronic Instrumentation and Measurements”, Oxford University Press, 1st Edition, 2013.
2. H.S. Kalsi, “Electronic Instrumentation”, Tata McGraw Hill Education, 4th Edition, 2019.

Course Outcomes:

After completion of the course, the students will be able to

- Acquire knowledge on the characteristics of measuring instruments and their classification.
- Conversant in construction, working of A.C / D.C meters and their proficient use.
- Acquire knowledge in various methods of digital meters and its measurement.
- Acquire knowledge on construction and working principle of various types of display devices and bridge comparison methods for R, L and C measurement.
- Demonstrate the various types of transducers used for physical measurements

EEPCCT-317	Power Electronics	3L:0T:0P	3 Credits
-------------------	--------------------------	-----------------	------------------

Course Objectives:

This course will enable students to

- *To explain about the operations, switching characteristics of power semiconductor devices*
- *To study the operations and performance parameters of controlled Rectifiers.*
- *To analyze the operation and performance of dc to dc converters.*
- *To impart knowledge on different control techniques for inverters.*
- *To familiarize the principle of operation of AC voltage controllers and cyclo converters*

MODULE I - POWER SEMICONDUCTOR DEVICES**9 Hours**

Study of switching characteristics of MOSFET, IGBT and SCR. Turn on and Turn off methods of SCR – Protection circuits – Triggering circuits.

MODULE II - PHASE CONTROLLED CONVERTERS**9 Hours**

Operation and analysis of single and three phase controlled rectifiers – half and fully controlled Converters with R, RL and RLE loads – Effect of source inductance on controlled rectifiers – Power factor and harmonic improvement methods - series converter, twelve pulse converter, Dual converter-circulating and non-circulating current mode.

MODULE III - DC TO DC CONVERTERS**9 Hours**

Principles of step down and step up chopper – Class A, B, C, D and E chopper, Multi-phase chopper, principle of operation of buck, boost and buck boost regulators – switching schemes.

MODULE IV - INVERTERS**9 Hours**

Single phase and three phase voltage source inverters – Voltage and harmonic control techniques – Capacitor commutated current source inverter and auto sequential current source inverter.

MODULE V - AC CHOPPER AND CYCLO CONVERTERS**9 Hours**

Single phase and Three-phase AC voltage controllers – Control strategy – Single phase step-up/step-down midpoint type and bridge type cyclo-converters – Three phase cyclo-converters Applications – regulated power supply, UPS, solid-state motor starter.

Total No. of Hours: 45**Textbooks:**

1. Ned Mohan, M. Underland, William P. Robbins, “Power Electronics Converters, applications and design”, JohnWiley & sons, Singapore, 2001.
2. M.H. Rashid, “Power Electronics: Circuits, Devices and Applications”, Pearson Education, New Delhi, 4th Edition, 2017.
3. M. D. Singh, K. B. Khanchandani, “Power Electronics”, Tata McGraw Hill, New Delhi, 2007.

Reference Books:

1. P. S. Bimbhra, “Power Electronics”, Khanna Publishers, New Delhi, 6th Edition, 2018.
2. Cyril W. Lander, “Power Electronics”, McGraw Hill Book Company, Singapore, 1993

Course Outcomes:

On successful completion of this course, the students will be able to,

- Discriminate the switching characteristics of power devices and to use for power conversion.
- Inspect the performance of control rectifiers in continuous and discontinuous modes.
- Acquire knowledge on operation and analysis of DC to DC converters.
- Outline the operating principles of various types of inverters.
- Gain knowledge on the operation of AC to AC converters and its applications

EEPECT -318	Electrical Machine Design	3L:0T:0P	3 Credits
--------------------	----------------------------------	-----------------	------------------

Course Objectives:

To impart knowledge about the following topics

- *Magnetic circuit parameters and thermal rating of various types of electrical machines.*
- *Armature and field systems for DC machines.*
- *Core, yoke, windings and cooling systems of transformers.*
- *Design of stator and rotor of induction machines and synchronous machines.*
- *The importance of computer aided design method.*

MODULE I - DESIGN OF FIELD SYSTEM AND ARMATURE

9 Hours

Major considerations in Electrical Machine Design – Materials for Electrical apparatus – Design of Magnetic circuits – Magnetising current – Flux leakage – Leakage in Armature. Design of lap winding and wave winding.

MODULE II - DESIGN OF DC MACHINES

9 Hours

Construction - Output Equations – Main Dimensions – Choice of specific loadings – Selection of number of poles – Design of Armature – Design of commutator and brushes – design of field
Computer program: Design of Armature main dimensions

MODULE III - DESIGN OF TRANSFORMERS

9 Hours

Construction - KVA output for single and three phase transformers – Overall dimensions – design of yoke, core and winding for core and shell type transformers – Estimation of No load current – Temperature rise in Transformers – Design of Tank and cooling tubes of Transformers. Computer program: Complete Design of single phase core transformer

MODULE IV - DESIGN OF INDUCTION MOTORS

9 Hours

Construction - Output equation of Induction motor – Main dimensions – choice of specific loadings – Design of squirrel cage rotor and wound rotor –Magnetic leakage calculations – Operating characteristics : Magnetizing current - Short circuit current – Circle diagram - Computer program: Design of slip-ring rotor

MODULE V - DESIGN OF SYNCHRONOUS MACHINES

9 Hours

Output equations – choice of specific loadings – Design of salient pole machines – Short circuit ratio – Armature design – Estimation of air gap length – Design of rotor –Design of damper winding – Determination of full load field MMF – Design of field winding – Design of turbo alternators –Computer program: Design of Stator main dimensions-Brushless DC Machines

Total No of Hours: 45

TEXT BOOKS:

1. Sawhney, A.K., ‘A Course in Electrical Machine Design’, Dhanpat Rai& Sons, New Delhi, 5th Edition, 1984.
2. M V Deshpande ‘Design and Testing of Electrical Machines’ PHI learning Pvt Lt, 2011.
3. Sen, S.K., ‘Principles of Electrical Machine Designs with Computer Programmes’, Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi, 2nd Edition, 2009.

REFERENCES

1. A.Shanmugasundaram,G.Gangadharan, R.Palani ‘Electrical Machine Design Data Book’, New Age International Pvt. Ltd., Reprint 2007.
2. V Rajini, V.S Nagarajan, ‘Electrical Machine Design’, Pearson, 2017.

Course outcomes:

- Design the machines with proper thermal rating and insulation requirements.
- Analyze and evaluate the various design parameters of a DC machine for variable speed motor applications in industry.
- Analyze the various parameters of transformer and to design distribution and power transformers for real time applications.
- Analyze and formulate the suitable design for three phase induction motor
- Apply the design concepts of Synchronous machines and BLDC motors

EEPECT -319	Utilization of Electrical Energy	3L:0T:0P	3Credits
--------------------	---	-----------------	-----------------

Course Objectives

- *To design optimized illumination system for domestic and industrial applications.*
- *To acquire knowledge about the different types of heating and welding.*
- *To make awareness in the usage of refrigeration and air conditioning system.*
- *To familiarize with the construction and working of traction systems.*
- *To impart the knowledge on electroplating techniques and operations of batteries.*

MODULE I- ILLUMINATION

9 Hours

Introduction – basic terminologies – laws of illumination – polar curves – Rouseau’s construction – electrical lamps – Basic principles of light control – Types – Design of lighting – illumination calculation (for residential, industrial, commercial, health care, street lightings, sports, administrative complexes) – bureau of energy efficiency star rating for lamps.

MODULE II - ELECTRIC HEATING AND WELDING

9 Hours

Role of electric heating for industrial applications – Types of Heating – Resistance – Induction - Arc furnace – Dielectric - solar – heating of building, domestic water heater, Electric oven. Welding methods – Resistance – Arc - Laser – Ultrasonic - Power supply equipment’s for welding.

MODULE III - REFRIGERATION AND AIR CONDITIONING

9 Hours

Electrical Circuit of Refrigerator – Trouble shooting of Refrigerator – Air conditioning types and their applications – smart air conditioning systems – Trouble shooting of air conditioning.

MODULE IV- ELECTRIC TRACTION

9 Hours

Traction system – Power supply – Traction drives – braking – Tractive effort calculations – speed-time characteristics. Locomotives and train – Tram ways and Trolley bus – Recent trends – Metro and Mono rail systems.

MODULE V - ELECTROLYSIS AND DOMESTIC APPLIANCES

9 Hours

Electrolysis- Laws of Electrolysis, power supply, Efficiency – Electro Plating. Batteries-Types – Components, rating of batteries – Methods of charging and maintenance. Domestic appliances: Electric iron, Electric toaster – Introduction to Green Building Concept and energy auditing.

Total no. of Hours: 45

Text Books:

1. J. B. Gupta, "Utilization of Electrical Power and Traction", Kataria Publications, Reprint Edition, 2020
2. R. K. Rajput, "Utilization of Electrical Power", Lakshmi publications, 2nd Edition, 2016.
3. E. Openhshaw Taylor and V. V. L. Rao, "Utilization of Electric Energy", Orient Longman, New Delhi, 2nd Edition, 2007.

Reference Books:

1. S. K. Sahdev, "Utilization of electrical energy and electric traction", New Age International Publisher, 1st Edition, 2016.
2. H. Partap, "Art and Science of Utilization of Electrical Energy", Dhanpat Rai and Sons, Delhi, 2nd Edition, 2015.

Course Outcomes:

After completion of the course, the students will be able to

- Develop a clear idea on lighting requirement for domestic and industrial needs in an efficient way
- Analyze the different types of heating and welding schemes used in the industries
- Repair the minor faults that occurs in refrigerator and in air conditioning system
- Analyze the speed-time characteristics and performance of the electric traction.
- Calculate the power requirement and efficiency of domestic appliances

EEPCCT-320	Linear Integrated Circuits	3L:0T:0P	3 Credits
------------	----------------------------	----------	-----------

Course Objectives

- *To introduce IC fabrication process and basic building blocks of linear integrated circuits.*
- *To familiarize the AC and DC characteristics of OP AMP 741 and its basic application circuits.*
- *To outline the design procedure of active filters and waveform generation using operational amplifiers.*
- *To illustrate the design procedure of various Regulator ICs for power supply circuits.*
- *To impart knowledge on the fundamental blocks and applications of special ICs like 555 and 565 ICs.*

MODULE I - IC FABRICATION

9 Hours

IC classification – Fundamental of monolithic IC technology – Epitaxial growth, masking and etching, diffusion of impurities – Realization of monolithic ICs and packaging: Fabrication of resistance, diode, capacitance and PV cells –BJT – FET – CMOS technology.

MODULE II - OPERATIONAL AMPLIFIERS AND APPLICATIONS

9 Hours

OP-AMP equivalent circuit – AC and DC characteristics – Open and closed loop configuration – Properties of practical op-amps (LM741, LM124, OP07, TL082) – Applications –Inverting and Non Inverting amplifier-Summer and Subtractor –Differentiator and Integrator - Instrumentation amplifier – Clipper and Clamper – D/A converters– A/D converter – TLC0820 and TLC7524 ICs–S/H circuit.

MODULE III - ACTIVE FILTERS AND WAVEFORM GENERATOR USING OP AMP

9 Hours

I and II order Active filter – Low pass, high pass, wide band pass and band stop Butterworth filters –Narrow band pass and notch filters – State variable filter – Switched capacitor filter – Waveform generator : Triangular and saw tooth wave generator – Effect of Slew Rate on waveform generation – Schmitt trigger and Multivibrators - RC Phase shift and Wien bridge oscillators – Applications

MODULE IV - ANALOG IC APPLICATIONS

9 Hours

Series op-amp regulator – IC voltage regulators: LM78XX, LM79XX Dual tracking regulators – Adjustable voltage regulators: LM117, LM317 – Switching regulator – SMPS – LM2524 – V/F converter – F/V converter – MPY634 Analog Multiplier– AGC and AVC– INA121 Instrumentation Amplifier – LM 380 Power amplifier – IC LM311 Comparator

MODULE V - PHASE LOCKED LOOP AND TIMER

9 Hours

PLL: 74HCT7046 – phase comparator – PLL Applications: Frequency synthesis, Motor speed control.

IC555 timer – Functional diagram – Multivibrators – Schmitt trigger – Missing pulse detector, Frequency counter – Dual timer SN74AH – CD4093 ICs.

Total no. of Hours: 45

Text Books

1. Ramakant A. Gayakward, “Op-amps and Linear Integrated Circuits”, Pearson Education, 5th Edition, 2015.

2. J. Michael Jacob, “Applications and Design with Analog Integrated Circuits”, Prentice Hall of India, New Delhi, 2nd Edition, 2010.
3. Sergio Franco, “Design with Operational Amplifiers and Analog Integrated Circuits”, McGraw Hill, 1st Edition, 2018.

Reference books

1. Muhammad H. Rashid, “Microelectronic Circuits: Analysis and Design”, Cengage learning Inc, 2nd Edition, 2011.
2. Roy Choudhary, Sheil. B. Jani, “Linear Integrated Circuits”, New Age Publication, 5th Edition, 2018.

Course Outcomes:

After completion of the course, the students will be able to

- Describe the IC fabrication process for any circuits.
- Design and analyze OP AMP based circuits for different applications like A/D and D/A conversion.
- Design filters and waveform generators using OP AMP.
- Design regulators for power supply circuits.
- Design multi-vibrators using 555 timer and demodulators using 565 PLL

EEPCCT-321	Measurements and Control Lab	0L:0T:2P	1 Credit
-------------------	-------------------------------------	-----------------	-----------------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

- *To give the students an insight into the constructional details of various measuring instruments for better understanding of their working principles.*
- *To demonstrate various Bridges for the measurement of resistance, inductance and capacitance using simulation and hardware set ups.*
- *To understand the concept of magnetism and to determine the B-H curve for magnetic material specimen.*
- *To provide the procedure to calibrate an energy meter.*
- *To analyze modelling parameters of electrical machines*

List of Experiments:

1. Measurement of electrical parameters using bridges (resistance/ inductance/ capacitance/ high/ medium/ low).
2. Verification of network theorems (Simulation/Practical method).
3. Extension range of voltmeter and ammeter
4. Calibration of energy meter.
5. Measurements on supply systems (frequency/phase/phase sequence).
6. Measurement Magnetic (Flux density (B)/Field intensity (H)/B-H loop/Magnetic Losses).
7. Operation amplifier application to M&I (Instrumentation amplifier/ Signal converter with grounded and floating loads).
8. Measurement parameters to model the electrical machines using the transfer-function method.
9. Measurement of open loop response of the electrical machine using its transfer-function using simulation.
10. Verification of various exercises and plots in control system using simulation.
11. Stability analysis of a system using simulation

Course Outcomes

After completion of the course, the students will be able to

- Realize the advantages and the necessity of measurement systems in all Engineering and Scientific works.
- Measure Resistance, Inductance and capacitance using AC and DC bridges.
- Determine the magnetization characteristics and hysteresis loss of Iron specimen using BH curve.
- Calibrate single phase and three phase energy meters used in domestic and commercial applications.
- Simulate modelling parameters of electrical machines

EEPCCT-322	Power Electronics Laboratory	0L:0T:2P	1 Credit
-------------------	-------------------------------------	-----------------	-----------------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

This course will enable students to:

- To introduce the concepts involved in power semiconductor devices and its characteristics and to understand the basics of triggering circuits.*
- To analyze the basic Power electronic circuit topologies including AC-DC, DC-DC, DC-AC and AC-AC converters.*
- To enable the students to do simulation of Converter circuits and experimentally verify the results.*
- To study and analyze the operation of the DC and AC drives.*
- To introduce the industrial control of power electronic circuits as well as safe electrical connection and measurement practices.*

List of Experiments:

1. Characteristics of SCR, TRIAC and IGBT.
2. Single phase half and fully controlled converter
3. Three phase half and fully controlled converter.
4. Step Down Chopper, Step up Chopper and Multi-quadrant Chopper
5. Single phase AC voltage controller
6. Single phase step up and step down cyclo-converter
7. Single phase and three phase IGBT based PWM inverter
8. Converter/ Chopper fed DC motor.
9. Speed control of Inverter fed Induction motor.
10. Microcontroller based control schemes for Stepper Motor.
11. Study of microcontroller based BLDC Motor Drive.
12. Study of voltage regulation of DC buck converter.

Course Outcomes:

After completion of this course, students will be able to

- Understand the operation of power electronic devices and its applications.
- Analyze the I-V characteristics of SCR, DIAC and TRIAC.
- Analyze the characteristics of IGBT and UJT.
- Illustrate the functioning of rectifiers and firing circuits.
- Distinguish the speed control of DC motor using converters.

EEPCCT-323	Integrated Circuits Laboratory	0L:0T:2P	1 Credit
-------------------	---------------------------------------	-----------------	-----------------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

- *To learn design, testing and characterizing of circuit behavior with analog ICs.*
- *To familiarize the AC and DC characteristics of OPAMP 741.*
- *To outline the design procedure of the different applications of OPAMP 741.*
- *To introduce the design of filters and waveform generators using OPAMP 741.*
- *To impart knowledge on the design and realization of multivibrator circuits using 555 Timer.*

List of Experiments

1. Obtain various characteristic parameters of IC 741
2. Design and analysis of Inverting, non-inverting amplifiers, Voltage follower, Adder and subtractor using OPAMP 741
3. Design and analysis of Integrator, Differentiator, Log and Antilog amplifier using OPAMP 741.
4. Design and analysis of comparator circuits (PWM and SPWM) and instrumentation amplifier using OPAMP 741.
5. a. Design and analysis of D/A and A/D converters using OPAMP 741.
- b. Verification of A/D converters and D/A converters using TLC0820 and TLC7524
6. Design and analysis of Schmitt trigger
Design and analysis of filter circuit (I order and II order) using OPAMP 741.
7. Design and analysis of Wein-bridge and RC phase shift oscillator.
8. Design and verification of waveform generator using OPAMP 741
9. a. Design and analysis of voltage regulators using IC 78XX/79XX and variable voltage regulator using IC LM317.
- b. Design and verification of power source using LM2524 IC.
10. a. Design and analysis of Monostable and Astable multivibrator using IC555.
- b. Design and verification of Monostable and Astable, multivibrator using IC
11. Implementation of Frequency system using IC 565

Course Outcomes

After completion of the course, the students will be able to

- Design and use the OPAMP for various applications.

- Design the application circuits like A/D, D/A filters using OPAMP and special ICs.
- Design and test various waveform generation circuits using OPAMPS and special ICs.
- Design and test regulator circuits for power supplies using voltage regulator ICs.
- Verify and demonstrate V/F, frequency multiplier and SMPS.

AU - 305	Professional Ethics	1L:0T:0P	0 Credit
-----------------	----------------------------	-----------------	-----------------

Course Objectives:

- *To enable the students to create an awareness on Engineering Ethics and Human Values,*
- *To in still Moral and Social Values and Loyalty and to appreciate the rights of others.*

MODULE I - HUMAN VALUES

3 Hours

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

MODULE II - ENGINEERING ETHICS

3 Hours

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

MODULE III - ENGINEERING AS SOCIAL EXPERIMENTATION

3 Hours

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics –A Balanced Outlook on Law.

MODULE IV - SAFETY, RESPONSIBILITIES AND RIGHTS

3 Hours

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

MODULE V - GLOBAL ISSUES

3Hours

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

Total no of Hours: 15

Text books:

1. Mike W. Martin and Roland Schinzinger, “Ethics in Engineering”, Tata McGraw Hill, New Delhi, 2003.
2. Govindarajan M, Natarajan S, Senthil Kumar V. S, “Engineering Ethics”, Prentice Hall of India, New Delhi, 2004.
3. Charles B. Fleddermann, “Engineering Ethics”, Pearson Prentice Hall, New Jersey, 2004.

References Books:

1. Charles E. Harris, Michael S. Pritchard and Michael J. Rabins, “Engineering Ethics – Concepts and Cases”, Cengage Learning, 2009.
2. John R Boatright, “Ethics and the Conduct of Business”, Pearson Education, New Delhi, 2003

Course Outcomes:

- Upon completion of the course, the student should be able to apply ethics in society,
- Discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

SEMESTER – VI

EEPCCT-424	Power System Analysis	2L:1T:0P	3 Credits
-------------------	------------------------------	-----------------	------------------

Course objectives:

- *To create computational models for power system using per unit analysis.*
- *To perform load flow analysis using Gauss Seidal and Newton-Raphson methods.*
- *To analyze the sequence network using symmetrical components.*
- *To impart the knowledge about symmetrical and unsymmetrical faults in power system.*
- *To model and analyze stability problems in power system.*

MODULE I - POWER SYSTEM

9 Hours

Need for system planning and operational studies - Power scenario in India - Power system components – Representation - Single line diagram - per unit quantities - p.u. impedance diagram - p.u. reactance diagram - Network graph, Bus incidence matrix, Primitive parameters, Bus admittance matrix from primitive parameters - Representation of off nominal transformer - Formation of bus admittance matrix of large power network– Reduction techniques on network matrices for network changes - Z bus Building algorithm.

MODULE II - POWER FLOW STUDIES

9 Hours

Classification of buses - formulation of load flow problem - Load flow solution by Gauss - Seidal, Newton -Raphson and Fast Decoupled Load Flow (FDLF) Analysis - Comparison - Computation of slack bus power, transmission loss and line flow - Voltage Control Methods - Tap-changing and phase - shifting transformers

MODULE III - SYMMETRICAL COMPONENTS AND SEQUENCE NETWORKS

9 Hours

Symmetrical components – Simple problems to calculate symmetrical voltages and currents – Sequence networks- positive, negative and zero sequence networks - Sequence networks of Series impedance, loads and Rotating machines – Advantages and Limitations.

MODULE IV - UNSYMMETRICAL FAULT ANALYSIS

9 Hours

Symmetrical components - Sequence impedances - Sequence networks - Analysis of Unsymmetrical faults at generator terminals: LG, LL and LLG - unsymmetrical fault occurring at any point in a power system - computation of post fault currents in symmetrical component and phasor domains.

MODULE V - STABILITY ANALYSIS

9 Hours

Definition - Importance of stability analysis- classifications - Steady state and transient stability - Angle and voltage stability - Single Machine Infinite Bus (SMIB) system - swing equation – Swing Curve – Numerical integration methods - Equal area criterion - Critical clearing angle and time - Factors affecting stability -Methods of improving transient stability - Contingency selection and ranking for the power system.

Total No of Hours- 45

Text Books:

1. John J. Grainger, William D. Stevenson, Jr, 'Power System Analysis', Mc Graw Hill Education (India) Private Limited, New Delhi, 2015.
2. Kothari D.P. and Nagrath I.J., 'Power System Engineering', Tata McGraw-Hill Education, 2nd Edition, 2008.
3. Hadi Saadat, 'Power System Analysis', Tata McGraw Hill Education Pvt. Ltd., New Delhi, 21st reprint, 2010.

Reference Books:

1. Pai M A, 'Computer Techniques in Power System Analysis', Tata Mc Graw-Hill Publishing Company Ltd., New Delhi, 2nd, 2007.
2. J. Duncan Glover, Mulukutla S. Sarma, Thomas J. Overbye, 'Power System Analysis & Design', Cengage Learning, 5th, 2012.

Course Outcomes:

- Ability to model the power system under steady state operating condition
- Ability to understand and apply iterative techniques for power flow analysis
- Ability to model and carry out short circuit studies on power system
- Ability to acquire knowledge on Fault analysis.
- Ability to model and analyze stability problems in power system

EEPCCP- 425	Microprocessors and Microcontrollers	3L:0T:0P	3Credits
--------------------	---	-----------------	-----------------

Course Objectives:

This course will enable students to

- *To get familiar with basic architecture and programming techniques of microprocessor 8085.*
- *To learn interfacing of memory and data transfer techniques using microcontroller.*
- *To understand the interfacing of input/output devices required for real time applications.*
- *To introduce the basic concepts of embedded system design using microcontroller.*
- *To equip the student with ability to design PWM control for various applications such as AC-DC, DC-DC converter, etc.*

MODULE I - ARCHITECTURE AND PROGRAMMING OF 8085 MICROPROCESSOR

9 Hours

8085 Microprocessor: Architecture, Addressing modes, Instruction set, Need for Assembly language – Development of Assembly language programs – Machine cycles and Timing diagrams, Programming and Interfacing. Application: Interfacing of stepper motor control with 8085 microprocessor.

MODULE II- INTRODUCTION TO MICROCONTROLLERS

9 Hours

Microprocessor and Microcontroller difference, RISC and CISC programmer's model, Criteria for selecting microcontroller. Overview of PIC family, PIC Microcontroller architecture, status register, Special function registers, Memory units, On-Chip peripherals, PIC16F877A and PIC24F pin configuration, Fuse bits of PIC – Case study on traffic light control using PIC Microcontroller.

MODULE III- PROGRAMMING FOR MICROCONTROLLERS

9 Hours

Data types and assembler directives, Addressing modes, Data transfer, Arithmetic, Logic and Compare, Rotate and Shift, Branch and Call instructions, MPLABX setup for assembly language programming, PIC24F I/O Port Programming, Time delay loop, Look-up table, Bit addressability, MACROs, Intel HEX file. Timer programming, Input capture and Wave Generator, PWM programming External Interrupt programming, ADC programming, EEPROM programming – Program using PIC24F Timer to generate waveforms.

MODULE IV - SERIAL COMMUNICATION PROTOCOLS AND PERIPHERAL INTERFACING

9 Hours

Serial communication protocols: Introduction to UART protocol, I2C protocol and its Programming, SPI protocol and its Programming, Serial Port programming using polling and interrupt. Peripheral interfacing and its programming : LCD and Keyboard Interfacing, Relay interfacing, Stepper and DC Motor control, RTC Interfacing, LM35 Temperature sensor interfacing, MAX7219 display controller interfacing – Program using PIC24F microcontroller for interfacing ultrasonic sensors.

MODULE V - ADVANCED MICROCONTROLLER

9 Hours

dsPIC33EV: Block diagram, Clock Distribution System, interrupt, Timer, PWMX control registers, high-speed PWMX module register- interconnection diagram, ADC-signal processing and conditioning.

Total No. of Hours: 45

Text Books:

1. Muhammad Ali Mazidi, Sarmad Naimi and Sepehr Naimi, “PIC Microcontroller and Embedded Systems: Using Assembly and C for PIC18”, Micro Digital Education, Illustrated Edition, 2017.
2. Ramesh S Gaonkar, “Microprocessor Architecture: Programming and Applications with the 8085”, Prentice Hall of India, New Delhi, 5th Edition, 2011.
3. Sunil Mathur, Jeebananda Panda, “Microprocessor and microcontroller”, PHI Learning Private Limited, New Delhi, 1st Edition, 2016.

Reference Books:

1. Sunil Mathur, Jeebananda Panda, “Microprocessor and Microcontroller”, PHI Learning Private Limited, New Delhi, 1st Edition, 2016.

Course Outcomes:

On successful completion of this course, the students will be able to,

- Illustrate the architecture of microprocessor and to develop skills in writing assembly language program.
- Have a clear understanding of microcontroller architecture with functional details of each pin.
- Write and debug Assembly and C programs for 8 bit Microcontroller.

- Interface input/output peripheral devices and to implement the advanced communication protocol like I2C and SPI using PIC Microcontroller.
- Design and develop microcontroller based real-time applications.

EEPECT -426	Solid State Drives	3L:0T:0P	3Credits
--------------------	---------------------------	-----------------	-----------------

Course Objectives:

To impart knowledge on the following Topics

- Steady state operation and transient dynamics of a motor load system.
- Analyze the operation of the converter/chopper fed dc drive, both qualitatively and quantitatively.
- Operation and performance of AC motor drives.
- Analyze and design the current and speed controllers for a closed loop solid state DC motor drive.

MODULE I - DRIVE CHARACTERISTICS

9 Hours

Electric drive – Equations governing motor load dynamics – steady state stability – multi quadrant Dynamics: acceleration, deceleration, starting & stopping – typical load torque characteristics – Selection of motor.

MODULE II - CONVERTER / CHOPPER FED DC MOTOR DRIVE

9 Hours

Steady state analysis of the single and three phase converter fed separately excited DC motor drive– continuous conduction – Time ratio and current limit control – 4 quadrant operation of converter / chopper fed drive-Applications.

MODULE III -INDUCTION MOTOR DRIVES

9 Hours

Stator voltage control–V/f control– Rotor Resistance control-qualitative treatment of slip power recovery drives-closed loop control— vector control- Applications.

MODULE IV -SYNCHRONOUS MOTOR DRIVES

9 Hours

V/f control and self-control of synchronous motor: Margin angle control and power factor control- Three phase voltage/current source fed synchronous motor- Applications.

MODULE V - DESIGN OF CONTROLLERS FOR DRIVES

9 Hours

Transfer function for DC motor / load and converter – closed loop control with Current and speed feedback–armature voltage control and field weakening mode – Design of controllers; current controller and speed controller- converter selection and characteristics.

Text Books:

1. Gopal K.Dubey, Fundamentals of Electrical Drives, Narosa Publishing House, 2nd Edition, 2001.
2. Bimal K.Bose. Modern Power Electronics and AC Drives, Pearson Education, 2002.
3. Vedam Subramanyam, "Electric Drives Concepts and Applications", 2nd Edition, McGraw Hill, 2016

Reference Books:

1. M.H.Rashid, "Power Electronic Circuits, Devices and Applications", Prentice Hall International, 2007.
2. R.Krishnan, Electric Motor & Drives: Modeling, Analysis and Control, Pearson, 2001.

Course Outcomes:

Upon completion of this course, the student able will able to

- Learns the fundamental concepts of power electronic converter fed DC and AC machines
- Can analyze the converter fed motor under different torque/speed conditions.
- Will be able to design converter fed drives with existing/new control techniques.

EEPCCP- 427	Microprocessors and Microcontrollers Laboratory	0L:0T:2P	1Credit
<i>(A minimum of TEN experiments to be conducted in the following Topics)</i>			

Course Objectives:

- *To become familiar with architecture and instruction set for 8085.*
- *To provide hands-on training of interfacing external sensors and actuators with microcontroller*
- *To impart knowledge for on-chip peripheral programs*
- *To impart knowledge to generate pulses for electrical applications.*
- *To impart knowledge to do minor projects using microcontroller for solving real world engineering problems*

List of Experiments

Microprocessor Experiments using 8085:

1. 8 bit - Addition, Subtraction, Multiplication and Division
2. Assembly Language Programming: Subroutines, parameter passing to subroutines

Microcontroller Experiments using PIC:

3. PIC Assembly language- Programming using the PIC Instruction Set.
4. a) PIC Timer to generate accurate delay using polling and interrupt
b) PIC Timer to generate waveforms
c) Seven Segment Display interfacing with PIC
5. a) 16x2 LCD interfacing with PIC
b) 4x4 matrix keyboard interfacing with PIC
6. PIC USART programming
7. PIC on-chip ADC for interfacing analog sensors

Application of Microcontroller using PIC:

8. Experimentation of DC Motor Interfacing and Speed/Direction Control
9. Stepper motor interfacing
10. DS1307 RTC Interfacing
11. MAX7219 LED matrix driver interfacing
12. Interface to peripherals and use of the I²C bus
13. Design of zero crossing detector
14. Design Frequency Counter which displays frequency of unknown pulse on 16x2 LCD
15. Design Bluetooth controlled 2-ch variable frequency square wave generator

Course Outcomes:

After completion of the course, the students will be able to

- Develop assembly language program for microprocessor 8085.
- Analyze various platforms for programming by knowing the complete hardware configurations.
- Analyze abstract problems and apply a combination of hardware and software to address the problem.
- Design a control algorithm for various applications using microcontrollers.
- Design and generate pulses for real time electrical applications.

EEPCCP- 428	Power Systems Simulation Laboratory	0L:0T:2P	1Credit
-------------	-------------------------------------	----------	---------

(A minimum of TEN experiments to be conducted in the following Topics)

Course Objectives:

- *To analyze the electrical power system using per unit analysis.*
- *To apply iterative techniques for power flow analysis of power system.*
- *To carry out short circuit studies and Economic load dispatch on power system.*
- *To analyze Load curve and Load duration curve.*
- *To model and analyze the voltage and frequency control loops in power system.*

List of Experiments

1. Computation of power system components in per units.
2. Modeling and Computation of Transmission Line Parameters
3. Formulation of a bus impedance matrix and admittance Matrix
4. Symmetrical components for different case studies
5. Short circuit studies of Power System.
6. Analysis of power-flow problem using Gauss-Seidel method.
7. Analysis of power-flow problem using Newton Raphson method.
8. Analysis of Economic load dispatch in power system.
9. Load curve and load duration curve
10. Numerical Integration of Swing equation
11. Modeling and Analysis of Load frequency control
12. Modeling and Analysis of Automatic Voltage Regulator system

Course Outcomes:

After completion of the course, the students will be able to

- Calculate the reactance values of power system components
- Formulate Bus Admittance and Impedance matrices, used in power flow analysis.
- Analyze the voltage and power flow condition of power system using Gauss Seidal and Newton Raphson methods.
- Analyze Symmetrical and Unsymmetrical faults in power system used to design relays and circuit breakers.
- Develop the load and load duration curves for calculating average load, unit generated load factor, etc.

PRJ EE- 302	MINI PROJECT	0L:0T:6P	3 Credits
--------------------	---------------------	-----------------	------------------

Course Objectives:

- *To develop their own innovative prototype of ideas.*
- *To train the students in preparing mini project reports and examination.*

The students in a group of 5 to 6 works on a topic approved by the head of the department and prepares a comprehensive mini project report after completing the work to the satisfaction. The progress of the project is evaluated based on a minimum of two reviews. The review committee may be constituted by the Head of the Department. A mini project report is required at the end of the semester. The mini project work is evaluated based on oral presentation and the mini project report jointly by external and internal examiners constituted by the Head of the Department.

Total no of Hours: 45

Course Outcomes:

- On Completion of the mini project work students will be in a position to take up their final year project work and find solution by formulating proper methodology.

VII SEMESTER

EET-426	Power System Operation And Control	3L:0T:0P	3 Credits
----------------	---	-----------------	------------------

Course Objectives:

- *To understand the economics of power system operation and planning.*
- *To realize the requirements and methods of real and reactive power control in power system*
- *To recognize the recent advancements in power system operation.*

MODULE I - INTRODUCTION

9 Hours

Introduction - Causes and effect of variable load on power stations, load curves and basic concepts of load dispatch - load forecasting. Necessity of voltage and frequency regulation– Factors affecting system security – Operating states of power system, P-f and Q-V loops – Need for voltage and frequency regulation in power system - Energy control center Functions.

MODULE II - REAL POWER CONTROL

9 Hours

Load Frequency Control (LFC) of single area system- Automatic Generation Control (AGC) - AGC in single and multi-area system- Tie-line bias control system. Generation and absorption of reactive power - basics of reactive power control – Automatic Voltage Regulator.

MODULE III - REACTIVE POWER CONTROL

9 Hours

Reactive power control – Generation and absorption of reactive power – Typical excitation system – Modeling – Static and dynamic analysis – Stability compensation – Generation and absorption of reactive power, Methods of voltage control: shunt reactors – Shunt capacitors – Series Capacitors – Synchronous condensers – Static VAR systems – Tap-changing transformer.

MODULE IV - LOAD FORECASTING AND UNIT COMMITMENT

9 Hours

Load forecasting – Components of system load – Forecasting of the base load by method of least square fit - Unit Commitment – Constraints: spinning reserve – Thermal unit constraints – Hydro constraints – Fuel constraints and other constraints – methods.

MODULE V - ROLE OF COMPUTERS IN POWER SYSTEM

9 Hours

Need of computer control of power systems-concept of energy control centres and functions– PMU, SCADA, EMS, WAMS- various operating states - state transition diagram- state estimation; Reliability: Indices - methods - unavailability.

Total No of Hours: 45

Course Outcomes:

At the end of the course the student will be able to

- Explain the effect of variable load on power system and load forecasting.
- Determine power system operation schedule.
- Design and analyze LFC and AGC loops.
- Recognize the role of computers in power system

Text Books:

1. Allen J. Wood, Bruce F. Wollen berg, “Power Generation, operation and control”, John Wiley and sons, 2nd Edition, 2008.
2. Abhijit Chakrabarti and Sunita Halder, “Power System Analysis Operation and Control”, PHI learning Pvt. Ltd., 3rd Edition, 2010
3. Hadi Saadat, ‘Power System Analysis’, McGraw Hill Education Pvt. Ltd., New Delhi

Reference Books:

2. A. K. Mahalanbias, D. P. Kothari and S. I. Ahson, “Computer Aided Power System Analysis and Control”, Tata McGraw Hill, 1990
3. P.S.R. Murty, “Operation and Control in Power Systems”, BS Publications, 2nd Edition, 2011.
4. Carson. W. Taylor, “Power System Voltage Stability”, Taylor-McGraw Hill, 2000.

HSMC-405	Entrepreneurship Development	3L:0T:0P	3 Credits
-----------------	-------------------------------------	-----------------	------------------

Course Learning Objectives:

- To enable the students to understand the concept of Entrepreneur and Entrepreneurship and relevant roles
- To enable the students to learn creativity and entrepreneurial plan including Project Feasibility and Project Appraisal
- To enable the students to understand Corporate entrepreneurship and issues related to Corporate entrepreneurship
- To enable the students to understand Family and Non-Family Entrepreneur & Women entrepreneurs and women entrepreneurs in India
- To enable the students to understand International Entrepreneurship Opportunities and Case

studies on Indian Start ups

MODULE I - ENTREPRENEURSHIP

9 Hours

Definition of Entrepreneur, Internal and External Factors, Functions of an Entrepreneur, Entrepreneurial motivation and Barriers, Classification of Entrepreneurship, Theory of Entrepreneurship, Concept of Entrepreneurship, Development of entrepreneurship; Concept of entrepreneur ,Manager and Entrepreneur(differences in their roles, responsibilities and Career Opportunities)

MODULE II - CREATIVITY AND ENTREPRENEURIAL PLAN

9 Hours

The business plan as an entrepreneurial tool, Contents of a business plan, Idea Generation, Screening and Project Identification, Creative Performance, Feasibility Analysis: Economic, Marketing, Financial and Technical; Project Planning: Evaluation, Monitoring and Control segmentation. Creative Problem Solving: Heuristics, Brainstorming, Synectics, Value Analysis, Innovation. Project Feasibility and Project Appraisal.

MODULE III - CORPORATE ENTREPRENEURSHIP

9 Hours

Introduction, Flavors of corporate entrepreneurship, Corporate venturing, Intrapreneurship, organizational transformation, Industry rule bending, Need for corporate entrepreneurship, domain of corporate entrepreneurship, conditions favorable for Corporate entrepreneurship, benefits of Corporate entrepreneurship, issues related to Corporate entrepreneurship.

MODULE IV - FAMILY AND NON FAMILY ENTREPRENEUR & WOMEN ENTREPRENEURS

9 Hours

Role of Professionals, Professionalism vs family entrepreneurs, Role of Woman entrepreneur, Factors influencing women entrepreneur, Challenges for women entrepreneurs, Growth and development of women entrepreneurs in India

MODULE V -INTERNATIONAL ENTREPRENEURSHIP OPPORTUNITIES

9 Hours

The nature of international entrepreneurship, Importance of international business to the firm, International versus domestic entrepreneurship, Stages of economic development. Institutional support for new ventures: Supporting Organizations; Incentives and facilities; Financial Institutions and Small scale Industries, Govt. Policies for SSIs. Case studies on Indian Startups.

Total No of Hours: 45

Course outcomes:

At the end of the course the student will be able to

- Understand the concept of Entrepreneur and Entrepreneurship and relevant roles
- Learn creativity and entrepreneurial plan including Project Feasibility and Project Appraisal
- Understand corporate entrepreneurship and issues related to corporate entrepreneurship
- Understand Family and Non-Family Entrepreneur & Women entrepreneurs and women entrepreneurs in India

- Understand International Entrepreneurship Opportunities and Case studies on Indian Start ups

Text Books:

1. Dynamics of Entrepreneurship Development Vasant Desai Himalaya Publication house 2011
2. Entrepreneurship, New Venture Creation David Holt Prentice Hall India 1991
3. Entrepreneurial Development S.S. Khanka Chand& Company Ltd. New Delhi 2013

Reference Books:

1. Entrepreneurship – Theory, Process and Practice Donald F Kuratko Cengage Learning 9th Edition, 2014
2. “Entrepreneurship Rajeev Roy Oxford University Press 2nd Edition, 2011

SEM EE-28	Seminar	0L:0T:2P	1 Credit
------------------	----------------	-----------------	-----------------

Course Objectives:

- To encourage the students to study advanced engineering developments
- To prepare and present technical reports.
- To encourage the students to use various teaching aids such as over -head projectors, power point presentation and demonstrative models.

Method of Evaluation:

- During the seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 15 minutes.
- In a session of three periods per week, 6 to 8 students are expected to present the seminar.
 - Each student is expected to present atleast twice during the semester and the student is evaluated based on that.
 - At the end of the semester, he / she can submit a report on his / her topic of seminar and marks are given based on the report.
- A Faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.
- Evaluation is 100% internal.

Course Outcomes:

After completion of the course, the students will be able to Review, prepare and present technological developments and face the placement interviews with confidence.

INT EE- 29/PRJEE-401	Internship/ Project Phase -I	0L:0T:6P	3 Credits
---------------------------------	-------------------------------------	-----------------	------------------

- The objective of the projects is to enable the students to work in convenient group of not more than four members in a group on a project involving analytical, experimental, design combination of these related to one or more areas of Electrical & Electronics Engineering.
- Each project shall have a guide who is member of faculty of Electrical & Electronics Engineering. Six periods per week is allotted for the phase-I of the project work.
- Each group of students should complete the project literature survey, problem statement methodology with few results. The guide and departmental committee shall evaluate the student's work for 100 marks based on one project presentation and internal viva-voice.
- Industrial training or Project work is an effective way to transfer the theoretical knowledge gained within the classroom to the real field application.
- It will provide a platform for the students to get a close glimpse about the functioning of the industry and how real-life challenges are solved in the domain of Electrical Engineering giving them practical exposure.
- Thus, the Industrial training or Project work will equip them with skill-sets which is essential from the perspective of employability as well.

PRJ EE-402	Project Phase -II	0L:0T:24P	12 Credits
-------------------	--------------------------	------------------	-------------------

Course Objectives:

- To develop the skills to solve a specific problem right from its identification and literature review till the successful solution of the same.
- To develop students' innovative ideas for the prototype design.
- To encourage the students to work as a team to solve the engineering problem
- To train the students for the preparation of project reports.
- To train the students to defend reviews and viva voce examination.

Course Description:

- A Project topic must be selected either from published lists or the students themselves may propose suitable topics in consultation with their guides.
- The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design and manufacture of a device, a research investigation, a computer or management project or a design problem.
- The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department.
- The End Semester Examination for the project work shall consist of an evaluation of the final project report by an external examiner, followed by a viva-voce examination conducted by a committee consisting of the external examiner and an internal examiner.
- Each team is expected to present their work at National/International conferences. Team that has come out with novel contribution will be encouraged to publish their work in any referred journals

Course Outcomes:

After completion of the course, the students will be able to

- Identify the problem statement for the project work through the literature survey.
- Choose the proper components as per the requirements of the design/system.
- Apply the acquainted skills to develop final model/system.
- Estimate, plan and execute the project as a team.
- Defend the finding and conclude with oral/written reports.

PROFESSIONAL ELECTIVE COURSES (PEC)

EEPECT - 101	Artificial Neural Networks	3L:0T:0P	3Credits
---------------------	-----------------------------------	-----------------	-----------------

Course Objectives:

- *To understand the biological neural network and to model equivalent neuron models.*
- *To understand the architecture, learning algorithms*
- *To know the issues of various feed forward and feedback neural networks.*
- *To explore the Neuro dynamic models for various problems.*

MODULE I - INTRODUCTION TO NEURAL NETWORKS 9 Hours

Introduction: A Neural Network, Human Brain, Models of a Neuron, Neural Networks viewed as Directed Graphs, Network Architectures, Knowledge Representation, Artificial Intelligence and Neural Networks Learning Process: Error Correction Learning, Memory Based Learning, Hebbian Learning, Competitive, Boltzmann Learning, Credit Assignment Problem, Memory, Adaption, Statistical Nature of the Learning Process

MODULE II - ARCHITECTURE OF NEURAL NETWORKS 9 Hours

Single Layer Perceptrons: Adaptive Filtering Problem, Unconstrained Organization Techniques, Linear Least Square Filters, Least Mean Square Algorithm, Learning Curves, Learning Rate Annealing Techniques, Perceptron –Convergence Theorem, Relation Between Perceptron and Bayes Classifier for a Gaussian Environment Multilayer Perceptron: Back Propagation Algorithm XOR Problem, Heuristics, Output Representation and Decision Rule, Computer Experiment, Feature Detection

MODULE III - BASIC NEURAL NETWORK TECHNIQUES 9 Hours

Back Propagation: Back Propagation and Differentiation, Hessian Matrix, Generalization, Cross Validation, Network Pruning Techniques, Virtues and Limitations of Back Propagation Learning, Accelerated Convergence, Supervised Learning

MODULE IV - COMPETITIVE NEURAL NETWORKS 9 Hours

Neural network based on competition: fixed weight competitive nets- Kohonen self organizing maps and applications-learning vector quantization-counter propagation nets and applications adaptive resonance theory: basic architecture and operation-architecture, algorithm, application and analysis of ART1 & ART2

MODULE V - SPECIAL NEURAL NETWORKS

9 Hours

Cognitron and Neocognitron - Architecture, training algorithm and application-fuzzy associate memories, fuzzy system architecture- comparison of fuzzy and neural systems.

Total No of Hours: 45

Text books:

1. Hagan, Demuth, Beale, 'Neural Network Design', PWS Publishing Company, 1st Edition, 2002.
2. Freeman, J.A and Skapura, D.M., 'Neural Networks - Algorithms, Applications and Programming Techniques', Addison Wesley Publications, Digitized Reprint (2007), 1991.
3. Andrew Glassner, "Deep Learning: From Basics to Practice" Vol-2, The Imaginary Institute, Seattle, WA, February 20, 2018

Reference Books:

1. Satish Kumar, 'Neural Networks–A Classroom Approach', Tata McGraw-Hill Publishing Company Limited, 2013.
2. N.P. Padhy, S.P. Simon, 'Soft Computing with MATLAB Programming', Oxford University Press, 2015.

Course Outcomes:

Upon completing this course, the student will be able to

- Understand the similarity of Biological networks and Neural networks
- Perform the training of neural networks using various learning rules.
- Understanding the concepts of forward and backward propagations.
- Understand and Construct the Hopfield models.

EEPECT-102	Bio Medical Instrumentation	3L:0T:0P	3 Credits
-------------------	------------------------------------	-----------------	------------------

Course Objectives:

- *To gain knowledge about the various physiological parameters measurements.*
- *To understand the various biochemical and nonelectrical sensors.*
- *To study about the assist devices.*
- *To gain knowledge on surgical equipments and telemetry in healthcare.*
- *To understand the concepts of recent advancements in healthcare.*

MODULE I- BIO - CHEMICAL AND NON ELECTRICAL PARAMETER MEASUREMENT

9 Hours

pH, PO₂, PCO₂, Colorimeter, Blood flow meter, Cardiac output, respiratory, blood pressure, temperature and pulse measurement, Blood Cell Counters.

MODULE II- ELECTRO-PHYSIOLOGY AND BIO-POTENTIAL RECORDING

9 Hours

Sources of bio medical signals, Bio-potentials, Bio potential electrodes, biological amplifiers, ECG, EEG, EMG, PCG, typical waveforms and signal characteristics

MODULE III- ASSIST DEVICES

9 Hours

Artificial kidney, Dialysis action, hemodialysis unit, membrane dialysis, portable dialyser monitoring and functional parameters, Heart-Lung Machine.

MODULE IV- PHYSICAL MEDICINE AND BIOTELEMETRY

9 Hours

Diathermies - Shortwave, ultrasonic and microwave type and their applications, Surgical Diathermy, Biotelemetry - Single Channel and Multiple Channel.

MODULE V- RECENT TRENDS IN MEDICAL INSTRUMENTATION

9 Hours

Telemedicine, Insulin Pumps, Radio pill, Endo-microscopy, Brain machine interface, Lab on a chip, Cryogenic Technique.

Total No. of Hours: 45

Textbooks:

1. Leslie Cromwell, "Biomedical Instrumentation and Measurement", Prentice Hall of India, New Delhi, 2011.
2. R. S. Khandpur, "Handbook of Biomedical Instrumentation", TATA Mc Graw-Hill, New Delhi, 2017.
3. John G. Webster, "Medical Instrumentation Application and Design", Third Edition, Wiley India, 2012

Reference Books:

1. Joseph J. Carr and John M. Brown, "Introduction to Biomedical Equipment Technology", John Wiley and Sons, New York, 2011.
2. R. Anandanatarajan, "Biomedical Instrumentation and Measurements", Second Edition, PHI Learning, 2016.

Course Outcomes:

On successful completion of this course, the students will be able to,

- Explain the electro- physiological parameters and bio-potentials recording.
- Measure the biochemical and non-electrical physiological parameters.
- Interpret the various assist devices used in the hospitals.
- Identify physical medicine methods and biotelemetry.
- Analyse recent trends in medical instrumentation.

EEPECT-103	Communication Systems	3L:0T:0P	3 Credits
-------------------	------------------------------	-----------------	------------------

Course objectives:

- The objective of the course is to understand the concept of analog and digital modulation techniques and to study various analog modems.
- The course enables the students to understand the need for error control techniques and to study the different error control schemes
- The course explores the role of communication engineering in the realization of smart grids.

MODULE I - ANALOG MODULATION SYSTEMS**9 Hours**

Time and frequency domain representation of signals - Amplitude modulation – Spectrum & Power relations, SSB, DSBSC and VSB modulations, AM Modulator and Demodulator circuits – Transistor AMDSBFC modulator, Envelope detector. Frequency modulation – Frequency spectrum & modulation index, NBFM & WBFM. FM Modulator and Demodulator circuits – Reactance

modulators, Armstrong Method, Balanced slope detector & Foster Seeley discriminator. Pre Emphasis & De-Emphasis – Super heterodyne receiver.

MODULE II - PULSE AND DIGITAL MODULATION SYSTEMS **9 Hours**

PCM system, Delta Modulation-Generation and detection of ASK, FSK and PSK-Bit Error Rate calculation-BER performance comparison- Digital T – Carrier system.

MODULE III - COMMUNICATION TECHNOLOGY **9 Hours**

PN sequence, Frequency hopping-Direct sequence spread spectrum systems. FDMA, TDMA and CDMA systems. Error Detection, Error correction- Hamming code, Block code, ARQ Mechanisms.

MODULE IV – CELLULAR COMMUNICATION **9 Hours**

TCP/IP Architecture, OSI Architecture, IEEE 802 Architecture, 1G, 2G, 3G Cellular Wireless Networks. WLAN, Bluetooth, Wimax, LTE networks.

MODULE V - POWER LINE COMMUNICATION **9 Hours**

Power supply networks, Narrowband & Broadband PLC, Structure of PLC access network, PLC network elements, Connection to core network, Structure of campus communication network and performance issues. Architecture of Smart grid technology.

Total No of Hours: 45

Text books:

1. Wayne Tomasi, 'Electronic Communication Systems', Pearson Education, 3rd Edition, 2001.
2. Roy Blake, 'Electronic Communication Systems', Thomson Delmar, 2nd Edition, 2002.
3. William Stallings, 'Wireless Communication and Networks' Pearson Education, 2003.

Reference books:

1. Janaka Ekanayake, Kithsiri Liyanage, Jianzhong Wu, Nick enkins "SMART GRID Technology and applications" John Wiley & sons Ltd., 2012.
2. Miller, 'Modern Electronic Communication', Prentice Hall of India, 2003.

Course outcomes:

After completion of the course, the students will be able to

- Analog Modulation Techniques and their comparative analysis and applications suitability.
- Process of Modulation and Demodulation.
- Types, characterization and performance parameters of transmission channels.
- Analog to digital conversion and Digital data transmission.

EEPECT - 104	Digital Signal Processing	3L:0T:0P	3Credits
---------------------	----------------------------------	-----------------	-----------------

Course Objectives:

- *To introduce the idea of signals and systems in time and frequency domain.*
- *To introduce fundamental principles and applications of signals and filters.*
- *To provide applications of signal processing.*
- *To make understand the basic concepts of signal filter techniques.*
- *To give basic ideas on implementation of DFT and FFT.*

MODULE I - SIGNALS AND SYSTEM

9 Hours

Need and benefits of Digital Signal Processing – Analog signal - Digital signal representation - classification of signals: continuous and discrete - energy and power; mathematical representation of signals spectral density; Classification of systems: linear- causal – stable – dynamic – recursive - time variance; sampling techniques – quantization - quantization error - Nyquist rate - aliasing effect - Analog to digital conversion.

MODULE II - DISCRETE TIME SYSTEM ANALYSIS

9 Hours

Z-transform and its properties - inverse z-transforms - methods; difference equation – Solution by z transform - application to discrete systems - Stability analysis - frequency response – Convolution linear - circular – Discrete Time Fourier transform - magnitude and phase representation.

MODULE III - DISCRETE FOURIER TRANSFORM

9 Hours

Discrete Fourier Transform - properties - relationship between z- transform - DTFT and DFT Frequency analysis of signal using DFT. FFT algorithms - advantages over discrete computation of DFT – radix-2 algorithms - Decimation In Time-Decimation In Frequency - Computation of IDFT using FFT.

MODULE IV - DESIGN OF DIGITAL FILTER

9 Hours

FIR and IIR filter realization – Parallel and cascade forms. FIR design: Windowing Techniques – Need and choice of windows – Linear phase characteristics. IIR Filters -Analog filter design – Butterworth and Chebyshev approximations; digital filter design using impulse invariant and bilinear transformation Warping- pre-warping – Structures for IIR systems - direct form – parallel - cascade and ladder structures.

MODULE V - PROGRAMMABLE DSP CHIPS**9 Hours**

Architecture and features of signal processor - Representation of Basic signals- Linear and circular convolution of two sequences - Implementation of DFT and FFT.

Text Books:

1. J. G. Proakis and D.G. Manolakis, “Digital Signal Processing Principles, Algorithms and Applications”, Pearson Education, New Delhi, 4th Edition, 2007.
2. A. V. Oppenheim and R.W. Schaffer, “Discrete Time Signal Processing”, PHI, 3rd Edition, 2014.

Reference Books:

1. Sanjit K. Mitra, “Digital Signal Processing, A Computer based Approach”, Tata McGraw-Hill, 4th Edition, 2017.
2. Rafel Gonzales and Richard Woods, “Digital Image Processing”, Pearson Education, 4th Edition, 2018.

Course Outcomes:

After completion of the course, the students will be able to

- Analyze the classifications of signals and systems in the time and frequency domains.
- Perform the stability analysis of discrete time system.
- Acquire knowledge on spectral analysis of signals.
- Design, analyze and compare digital filters for processing of discrete time signals.
- Acquire knowledge on DSP architecture and implement DFT and FFT Algorithms in DSP

EEPECT-105	Electric Power Quality	3L:0T:0P	3 Credits
-------------------	-------------------------------	-----------------	------------------

Course objectives:

To impart knowledge about the following topics

- Causes & Mitigation techniques of various PQ events.
- Various Active & Passive power filters.

MODULE I- INTRODUCTION TO POWER QUALITY**9 Hours**

Terms and definitions & Sources – Overloading, under voltage, over voltage - Concepts of transients - Short duration variations such as interruption - Long duration variation such as

sustained interruption - Sags and swells - Voltage sag - Voltage swell - Voltage imbalance – Voltage fluctuations - Power frequency variations - International standards of power quality – Computer Business Equipment Manufacturers Associations (CBEMA) curve .

MODULE II -VOLTAGE SAG AND SWELL

9 Hours

Estimating voltage sag performance - Thevenin's equivalent source - Analysis and calculation of various faulted condition - Estimation of the sag severity - Mitigation of voltage sag, Static transfer switches and fast transfer switches. - Capacitor switching – Lightning - Ferro resonance - Mitigation of voltage swells.

MODULE III -HARMONICS

9 Hours

Harmonic sources from commercial and industrial loads - Locating harmonic sources – Power system response characteristics - Harmonics Vs transients. Effect of harmonics – Harmonic distortion - Voltage and current distortions - Harmonic indices - Inter harmonics – Resonance Harmonic distortion evaluation, IEEE and IEC standards.

MODULE IV- PASSIVE POWER COMPENSATORS

9 Hours

Principle of Operation of Passive Shunt and Series Compensators, Analysis and Design of Passive Shunt Compensators Simulation and Performance of Passive Power Filters- Limitations of Passive Filters Parallel Resonance of Passive Filters with the Supply System 100 and Its Mitigation. Fundamentals of load compensation – voltage regulation & power factor correction.

MODULE V- POWER QUALITY MONITORING & CONTROLS 9 Hours

Monitoring considerations - Monitoring and diagnostic techniques for various power quality problems - Quality measurement equipment - Harmonic / spectrum analyzer - Flicker meters Disturbance analyzer - Applications of expert systems for power quality monitoring. Principle& Working of DSTATCOM – DSTATCOM in Voltage control mode, current control mode, DVR Structure – Rectifier supported DVR – DC Capacitor supported DVR -Unified power quality conditioner.

Total No of Hours: 45

Text books:

1. Roger. C. Dugan, Mark. F. Mc Granagham, Surya Santoso, H.WayneBeaty, “Electrical Power Systems Quality”, McGraw Hill,2003
2. J. Arrillaga, N.R. Watson, S. Chen, “Power System Quality Assessment”, (New York : Wiley), 2000.
3. Bhim Singh, Ambrish Chandra, Kamal Al-Haddad,” Power Quality Problems & Mitigation Techniques” Wiley, 2015.

Reference books:

1. G.T. Heydt, “Electric Power Quality”, 2nd Edition. (West Lafayette, IN, Stars in a Circle Publications, 1994.
2. M.H.J Bollen, “Understanding Power Quality Problems: Voltage Sags and Interruptions”, (New York: IEEE Press), 2000.

Course outcomes:

After completion of the course, the students will be able to

- Understand various sources, causes and effects of power quality issues, electrical systems and their measures and mitigation.
- Analyze the causes & Mitigation techniques of various PQ events.
- Study about the various Active & Passive power filters.
- Understand the concepts about Voltage and current distortions, harmonics.
- Analyze and design the passive filters.
- Acquire knowledge on compensation techniques.
- Acquire knowledge on DVR.

EEPECT-106	Electric Vehicle Technology	3L:0T:0P	3 Credits
-------------------	------------------------------------	-----------------	------------------

Course objectives:

- *To introduce configurations of EV and HEVs*
- *To design electric vehicle & HEV for various applications*
- *To select appropriate motor and converter for EV applications*
- *To select battery, battery indication system for EV applications*
- *To develop battery charger for an EV*

MODULE I- INTRODUCTION TO ELECTRIC VEHICLES

9 Hours

Configuration of Electric Vehicles, Performance of Electric Vehicles, Traction motor characteristics, Tractive effort and Transmission requirement, Vehicle performance, Tractive effort in normal driving, Energy consumption Concept of Hybrid Electric Drive Trains, Architecture of Hybrid Electric Drive Trains, Series Hybrid Electric Drive Trains, Parallel hybrid electric drive trains.

MODULE II -ENERGY STORAGE FOR EV AND HEV

9 Hours

Energy storage requirements, Battery parameters, Types of Batteries, Modeling of Battery, Fuel Cell basic principle and operation, Types of Fuel Cells, PEMFC and its operation, Modeling of PEMFC, Super capacitors.

MODULE III- ELECTRIC PROPULSION

9 Hours

EV consideration, DC motor drives and speed control, Induction motor drives, Permanent Magnet Motor Drives, Switch Reluctance Motor Drive for Electric Vehicles, Configuration and control of Drives.

MODULE IV-DESIGN OF ELECTRIC AND HYBRID ELECTRIC VEHICLES 9 Hours

Series Hybrid Electric Drive Train Design: Operating patterns, control strategies, Sizing of major components, power rating of traction motor, power rating of engine/generator and design of PPS
Parallel Hybrid Electric Drive Train Design: Control strategies of parallel hybrid drive train, design of engine power capacity, design of electric motor drive capacity, transmission design and energy storage design.

MODULE V-POWER ELECTRONIC CONVERTER FOR BATTERY CHARGING

9 Hours

Charging methods for battery, Termination methods, charging from grid, The Z-converter, Isolated bidirectional DC-DC converter, Design of Z- converter for battery charging, High-frequency transformer based isolated charger topology, Transformer less topology.

Total No of Hours: 45

Text books:

1. Modern Electric, Hybrid Electric, and Fuel Cell Vehicles: Fundamentals, Theory, and Design
M. Ehsani, Y. Gao, S. Gay and Ali Emadi CRC Press 2005
2. Electric and Hybrid Vehicles: Design Fundamentals Iqbal Husain CRC Press 2003

Reference books:

1. Energy Management Strategies for Electric and Plug-in Hybrid Electric Vehicles Sheldon S. Williamson Springer 2013.
2. Modern Electric Vehicle Technology C.C. Chan and K.T. Chau Oxford University 2001.

Course outcomes:

After completion of the course, the students will be able to

- Explain the working of electric vehicles and recent trends.
- Analyze different power converter topology used for electric vehicle application.
- Develop the electric propulsion unit and its control for application of electric vehicles.
- Design converters for battery charging and explain transformer less topology.

EEPECT-107	Electrical Energy Audit And Management	3L:0T:0P	3 Credits
-------------------	---	-----------------	------------------

Course Objectives:

- To understand the purpose of energy Audit and management.
- To learn about the utility and efficiency of energy.
- To learn the application of energy conservation
- To learn the financial analysis of the energy.

MODULE I - GENERAL ASPECTS OF ENERGY MANAGEMENT AND ENERGY AUDIT

9 Hours

Commercial and Non-Commercial Energy – Final Energy Consumption – Energy Needs of Growing Economy – Energy Pricing – Energy Conservation and its Importance – Re-Structuring of the Energy Supply Sector – Energy Conservation Act-2001 and its Features – Electricity Tariff – Thermal Basics -Need and Types of Energy Audit – Energy Management/Audit Approach- Understanding Energy Costs.

MODULE II - ENERGY MANAGEMENT

9 Hours

Definition and Objective of Energy Management, Principles of Energy management, Energy Management Strategy, Energy Manager Skills, key elements in energy management, force field analysis, energy policy, format and statement of energy policy, Organization setup and energy management. Responsibilities and duties of energy manager under act 2001. Energy Efficiency Programs. Energy monitoring systems.

MODULE III - ENERGY EFFICIENCY IN ELECTRICAL UTILITIES

9 Hours

Electrical load management and maximum demand control – power factor improvement and its benefit – selection and location of capacitors – performance assessment of PF capacitors – automatic power factor controllers – transformer losses – losses in induction motors – factors affecting motor performance – rewinding and motor replacement issues – soft starters with energy saver – variable speed drives – Fans and blowers:

MODULE IV - ENERGY CONSERVATION IN APPLICATIONS

9 Hours

Motive power (motor and drive system).- Illumination - Heating systems (boiler and steam systems) - Ventilation(Fan, Blower and Compressors) and Air Conditioning systems - Pumping System - Cogeneration and waste heat recovery systems - Utility industries (T and D Sector)

MODULE V- FINANCIAL ANALYSIS

9 Hours

Financial appraisals; criteria, simple payback period, return on investment, net present value method, time value of money, break even analysis, sensitivity analysis and numerical based on it, cost optimization, cost of energy, cost of generation.

Total no of hours: 45

Text books:

1. Moncef Krati, Energy Audit of Building Systems: An Engineering Approach, 2nd Edition, CRC Press, 2016.
2. Sonal Desai, Handbook of Energy Audit, McGraw Hill Education (India) Private Limited, 2015
3. Bureau of Energy Efficiency – Energy Managers and Energy Auditors Guide book, 2006

Reference books:

1. Thomas D.Eastop, Energy Efficiency: For Engineers and Technologists, Logman Scientific and Technical, 1990
2. Larry C. Witte, Philip S.Schmidt, David R.Brown, Industrial Energy Management and Utilization, Springer Berlin Heidelberg, 1988

Course outcomes:

After completion of the course, the students will be able to

- To Analyze the various energy techniques of energy management
 - To Electrical load management and maximum demand control
- To analysis in financial purpose

EEPECT-108	Embedded System Design	3L:0T:0P	3 Credits
------------	------------------------	----------	-----------

Course objectives:

- *To gain knowledge about the fundamentals of embedded systems and its communication protocols.*
- *To understand the architectural features of ARM processor.*
- *To learn about the different programming techniques for ARM processor.*
- *To impart knowledge on ARM processor peripherals with device driver and its interface circuits.*

- *To provide a platform for the student to design, implement, integrate, and develop software and hardware applications with the real time system.*

MODULE I – INTRODUCTION

9 Hours

Introduction to functional building blocks of embedded systems – Register, memory devices, ports, timer, interrupt controllers using circuit block diagram representation for each categories.

MODULE II - ARM ARCHITECTURE

9 Hours

ARM Programmer's model - Registers – Processor modes - Pipeline - Interrupts – ARM organization - ARM processor families – Instruction sets – Thumb Instruction Set: Register Usage, Other Branch Instructions, Data Processing Instructions – ARM Memory Management.

MODULE III - ARM PROCESSOR PROGRAMMING

9 Hours

Writing and optimizing the embedded C Code – Profiling and Cycle Counting – Instruction Scheduling – Register Allocation – Conditional Execution – Looping Constructs – Bit Manipulation - Timers and counters - Watchdog timer. Programming Tools: IDE and Programmer Interface.

MODULE IV - EMBEDDED NETWORKS

9 Hours

Distributed Embedded Architecture – Hardware and Software Architectures, Networks for embedded systems– I2C, CAN Bus, Ethernet, Internet, Network-based design– Communication Analysis, system performance Analysis, Hardware platform design, Allocation and scheduling, Design Example: Elevator Controller.

MODULE V - REAL TIME OPERATING SYSTEM (RTOS)

9 Hours

Introduction to basic concepts of RTOS, Basics of real time & embedded system operating systems, RTOS – Interrupt handling, task scheduling; embedded system design issues in system development process – Action plan, use of target system, emulator, use of software tools.

Total No of Hours: 45

Text books:

1. Rajkamal, 'Embedded System – Architecture, Programming, Design', Tata McGraw Hill, 2003.
2. Brian Amos, "Hands-On RTOS with Microcontrollers: Building Real-time Embedded Systems Using Free RTOS, STM32 MCUs, and SEGGER Debug Tools", Thomas Learning, 1st Edition, 2020.

Reference books:

1. Yifeng Zhu, “Embedded Systems with ARM Cortex-M Microcontrollers in Assembly Language”, E-Man Press LLC, 2nd Edition, 2016.
2. Andrew N. Sloss, Dominic Symes, Chris Wright, “ARM Systems Developer’s Guides - Designing and Optimizing System Software”, Elsevier, 2008.
3. Frank Vahid, ‘Embedded System Design – A Unified Hardware & Software Introduction’, John Wiley, 2002.

Course outcomes:

Upon completion of this course, students will be able to

- Remember the concepts of process and controllers.
- Apply the concepts for real-time applications.
- Create a real-time system for particular applications

EEPECT-109	Flexible AC Transmission System (FACTS)	3L:0T:0P	3 Credits
-------------------	--	-----------------	------------------

Course Objectives:

- *To introduce the basic concepts, different types of FACTS controllers in power transmission.*
- *To understand the scope and applications of FACTS controllers*

MODULE I - FUNDAMENTAL OF FACTS**9 Hours**

Introduction to FACTS controllers – Reactive power control: Reactive power, uncompensated transmission line, reactive power compensation – Principles of conventional reactive power compensators: Synchronous condensers. Fundamental of AC transmission system, transmission problem and needs, emergence of FACTS-Basic types of FACTS controllers –benefits from FACTS technology – Comparison of HVDC and FACTS.

MODULE II - THYRISTOR CONTROLLED SHUNT COMPENSATION**9 Hours**

Objectives of Shunt Compensation – Methods of Controllable VAR Generation – Static VAR compensators – SVC, STATCOM – Compensator Control – Comparison Between SVC & STATCOM.

MODULE III - THYRISTOR CONTROLLED SERIES COMPENSATION**9 Hours**

Objectives of Series Compensation – Variable Impedance type series compensators – GCSC, TSSC and TCSC – basic control schemes –Switching converter type Series compensator: SSSC – internal and external control.

MODULE IV - VSC BASED SHUNT AND SERIES COMPENSATOR**9 Hours**

Static Synchronous Compensator (STATCOM): Principle of operation, VI Characteristics, Harmonic performance – Steady state model – SSR mitigation. Static Synchronous Series Compensator (SSSC): Principle of operation and characteristics of SSSC – control range and VA rating – capability to provide real power compensation – control scheme for SSSC.

MODULE V - UNIFIED POWER FLOW CONTROLLER**9 Hours**

Basic operating principles – conventional transmission control capability of UPFC – Independent real and reactive power flow control – control scheme for UPFC – Basic control system for P and Q control – dynamic performance.

Total No of Hours: 45**Text Books:**

1. Narain G. Hingorani and Laszlo Gyugyi, “Understanding FACTS concepts and technology of flexible AC transmission systems” IEEE power Engineering society Sponsor, IEEE press, 2001.
2. R. Mohan Mathur and Rajiv K. Varma, “Thyristor-Based FACTS Controllers for Electrical Transmission Systems”, IEEE press-John Wiley and Sons publications, 2002.
3. Einar V. Larsen, Jaun J. Sanchez-Gasca and Joe H. Chow, “Concepts of design of FACTS Controllers to damp power swings”, IEEE Transaction on Power Systems, Vol. 10, no. 2, May 1995.

Reference Books:

1. Yong Hua Song and Allan T Johns, “Flexible AC Transmission System (FACTS)”, IEEE Power Engineering Series-IEEE press, 1999.
2. K. R. Padiyar, “HVDC Power Transmission Systems Technology and System Interactions”, New Age International (p) Limited, New Delhi, 2003.

Course Outcomes:

Upon completion of the course, the students shall be able to

- Understand various Power flow control issues in transmission lines, for the purpose of identifying the scope and for selection of specific FACTS controllers.
- Apply the concepts in solving problems of simple power systems with FACTS controllers.
- Design simple FACTS controllers.

EEPECT - 110	Solar Photo Voltaic Systems	3L:0T:0P	3Credits
---------------------	------------------------------------	-----------------	-----------------

Course Objectives:

- *To impart fundamental knowledge of solar cell formation, its properties and manufacturing*
- *To understand the various components required in grid connected systems and its importance.*
- *To discuss the various components in standalone PV systems.*
- *To gain knowledge on various solar hybrid systems and their comparisons.*
- *To design the PV systems for various real load applications on cost economics.*

MODULE I – FUNDAMENTALS OF PHOTOVOLTAIC SYSTEMS

9 Hours

Solar Cells: Structure and working - Types, Electrical properties - Cell properties and design - PV cell interconnection and Module fabrication - PV Modules and arrays. Commercial technologies: Mono crystalline and Multi crystalline, Silicon – Wafer based Solar cell, thin film solar cells: A-Si, Cd-Te and CIGS, Concentrated PV cells, developing technologies: Organic cells, Dye sensitized cells – Photovoltaic in global and Indian scenario

MODULE II - SOLAR PV FOR ON-GRID APPLICATIONS

9 Hours

Solar cells to solar array – On-Grid PV system – With and without storage – Balance of system – DC-DC converters – Inverters – Net Metering – Design and analysis – Performance evaluation and monitoring

MODULE III - SOLAR PV FOR OFF-GRID APPLICATIONS

9 Hours

Off-Grid standalone PV system – System sizing – Module and Battery – Storage – Batteries for PV systems – Sun Tracking mechanism – Types of tracking – One-axis, Two-axis – Maximum power point tracking – Design and analysis – Performance evaluation and monitoring

MODULE IV- HYBRID SYSTEMS

9 Hours

Solar, Biomass, Wind and Diesel Hybrid systems - Comparison and selection criteria - simple hybrid systems – storage arrangements - Introduction to Micro grid – Comparison of micro grid with conventional power system – Architecture

MODULE V- COST BENEFIT ANALYSIS FOR SOLAR PV INSTALLATIONS 9 Hours

Cost and manufacturability – Manufacturing economics – Scaling – Pricing – Trends in retail pricing – Energy economics – Grid tied power plant – Solar street lighting system - Simple payback calculation.

Total no. of Hours: 45

Course Outcomes:

After completion of the course, the students will be able to

- Describe the basic concepts of solar cells and its properties.
- Discuss about the selection of interfacing components in solar grid connected systems.\
- Review about the various DC/AC equipments used for stand-alone PV applications through requirements and design calculations.
- Understand the various components required in grid connected systems and its importance.
- Gain knowledge on various solar hybrid systems and their comparisons.
- Design the PV systems for various real load applications on cost economics

EEPECT - 111	Robotics and Control	3L:0T:0P	3Credits
--------------	----------------------	----------	----------

Course Objectives :

- *To introduce basic Robotic terminologies.*
- *To illustrate the functions of the basic components of a Robot.*
- *To introduce manipulator dynamics and gripper types.*
- *To illustrate kinematics and path planning.*
- *To introduce dynamics and control operation.*

MODULE I - INTRODUCTION

9 Hours

Definition and origin of Robotics – different types of Robotics – various generations of Robots – degrees of freedom – Robot classifications and specifications- Asimov's laws of Robotics – dynamic stabilization of Robots.

MODULE II - MODELING OF ROBOTS**9 Hours**

Mechanical structure and notations – Description of links and joints – kinematics modeling of the manipulator – Denavit - Haternberg notation – Kinematic relationship between adjacent links – Manipulator transformation matrix – Inverse matrix

MODULE III - MANIPULATORS AND GRIPPERS DIFFERENTIAL MOTION 9 Hours

Construction of manipulators – manipulator dynamics and force control – electronic and pneumatic manipulator control circuits – end effectors – various types of grippers – design considerations.

MODULE IV - KINEMATICS AND PATH PLANNING**9 Hours**

Linear and angular velocities-Manipulator Jacobian-Prismatic and rotary joints-Inverse -Wrist and arm singularity - Static analysis - Force and moment Balance Solution kinematics problem – Robot programming languages

MODULE V - DYNAMICS AND CONTROL AND APPLICATIONS**9 Hours**

Lagrangian mechanics-2DOF Manipulator-Lagrange Euler formulation-Dynamic model – Manipulator control problem-Linear control schemes-PID control scheme-Force control of Robotic manipulator. Multiple Robots – machine interface – Robot cell design – selection of Robot – applications.

Total No of Hours: 45**Text Books:**

1. Saeed B Niku, “Introduction to Robotics Analysis, Control, Applications”, John Wiley and Sons, 2nd Edition 2010.
2. Mittal R K and Nagarath I J, “Robotics and Control”, Tata McGraw Hill, 1st Edition 2005.
3. Mikell P. Weiss G.M., Nagel R.N., Odraj N.G., Industrial Robotics, McGraw-Hill Singapore, 2015.

Reference Books :

1. Ashitava Ghoshal, “Robotics-Fundamental Concepts and Analysis”, Oxford University Press, 6th Edition 2010.
2. Spyros G Tzafestas, “Introduction to Mobile Robot Control”, Elsevier Science, 1st Edition 2018

Course Outcomes:

After completion of the course, the students will be able to

- Outline the anatomy of the Robot.
- Represent the kinematic mathematical modeling of Robot.
- Gain knowledge on manipulator and gripper operation.
- Develop kinematic and path planning equations for standard configurations.
- Familiarize in various control schemes of Robotics control.

EEPECT - 112	High Voltage Engineering	3L:0T:0P	3Credits
---------------------	---------------------------------	-----------------	-----------------

Course Objectives:

- *To understand the causes of over voltages and their effects on power system*
- *To familiarize the Breakdown phenomenon in Gas, Liquid, Solid Dielectrics.*
- *To analyze the characteristics of high voltage, current and impulse voltage generator.*
- *To apply suitable methods to measure high voltage, current and impulse voltage*
- *To test the power apparatus as per Indian Standard Specification*

MODULE I - OVER VOLTAGE PHENOMENON AND INSULATION COORDINATION

9 Hours

Causes of over voltages and their effects on power system Lightning, switching and temporary over voltages -Protection against over voltages - Bewley lattice diagram - Insulation Coordination: estimation and control of electric stress, Coordination between insulation and protection level.

MODULE II - ELECTRICAL BREAKDOWN OF SOLID, LIQUID AND GAS MEDIUM

9 Hours

Solids dielectrics: Intrinsic, electromechanical and thermal breakdown composite dielectrics – Liquids dielectrics: Conduction and breakdown in pure and commercial liquids, suspended particle theory, cavitation and bubble theory, stressed oil volume theory. Gases dielectrics: Ionization process, Townsend's current growth equations and criterion for breakdown. Streamer theory of breakdown, Paschen's law, breakdown in non-uniform fields and corona discharges.

MODULE III - GENERATION OF HIGH VOLTAGES AND CURRENTS **9 Hours**

Generation of high DC voltages: Rectifier and Voltage doubler circuits, Cockroft Walton voltage multiplier, Vande - Graff Generator. Generation of high AC voltages: cascaded transformers, Resonant Transformer, Tesla coils. Generation of impulse and switching surges: Marx circuit - Generation of high impulse current - Tripping and control of impulse generators

MODULE IV- MEASUREMENT OF HIGH VOLTAGES AND CURRENTS **9 Hours**

HVDC measurement: Series resistance micro-ammeter, Resistance Potential divider, Generating Voltmeter. Power frequency A.C voltage measurement: Series Impedance Ammeter, Potential divider, Potential transformer, Electrostatic Voltmeters. Impulse voltage measurements: sphere gaps, Digital techniques in high voltage measurement. Impulse current measurement: current transformer, Rogowski coil, pure resistive shunt method.

MODULE V- HIGH VOLTAGE TESTING **9 Hours**

Indian Standards / IEC specification for testing - correction factor - testing of insulators, isolators, bushing, circuit breakers, cables, power transformers and surge arresters - radio interference measurement – High voltage laboratory testing facility - safety precautions in H. V. Labs.

Total no of Hours: 45

Text Books:

1. M. S. Naidu and V. Kamaraju, "High Voltage Engineering", Tata McGraw Hill Private Limited, 5th Edition, 2013.
2. E. Kuffel, W. S. Zaengl and J. Kuffel, "High Voltage Engineering: Fundamentals", Elsevier, 2nd Edition, 2000.
3. C. L. Wadhwa, "High Voltage Engineering", New age international, 3rd Edition, 2014.

Reference Books:

1. Ravindra Arora, Wolfgang Mosch, "High Voltage and Electrical Insulation Engineering", John Wiley and Sons, 2011.
2. L. L. Alston, "High Voltage Technology", Oxford University Press, New Delhi, 1st Indian Edition, 2008.

Course Outcomes:

After completion of the course, the students will be able to

- Demonstrate the causes and effects of over voltages, currents on power system and also discuss the insulation coordination.
- Analyze the various breakdown processes in solid, liquid and gaseous insulating materials.

- Explain the different methods for generation of high voltages and currents.
- Apply the methods of measurement for high voltages and currents in electrical apparatus.
- Test and evaluate the performance of high voltage equipment.

EEPECT-113	Industrial Automation	3L:0T:0P	3 Credits
-------------------	------------------------------	-----------------	------------------

Course objectives:

- *To know about the design of a system using PLC.*
- *To study about PLC Programming*
- *To study knowledge on application of PLC*
- *To have an exposure SCADA architecture*
- *To know about the fundamentals of DCS.*

MODULE I - PLC ARCHITECTURE

9 Hours

Introduction and overview of Industrial automation – Block diagram of PLC – different types of PLC – Type of input and output – Introduction to relay logic- Application of PLC.

MODULE II -PLC PROGRAMMING

9 Hours

Evaluation of PLC, PLC Architecture, Basic Structure. PLC Programming: Ladder Diagram – Ladder diagram symbols, Ladder diagram circuits. PLC Communications and Networking, PLC Selection: I/O quantity and Type, Memory size and type, Programmer MODULEs. PLC Installation, Advantages of using PLCs.

MODULE III - DISTRIBUTED CONTROL SYSTEM

9 Hours

Introduction, Overview of Distributed Control System, DCS Software configuration, DCS Communication, DCS Supervisory Computer Tasks, DCS Integration with PLCs and Computers, Features of DCS, Advantages of DCS.

MODULE IV - SCADA

9 Hours

Introduction to DCS and SCADA - Block diagram – function of each component – Security objective – Operation and engineering station interface – Communication requirements.

MODULE V - APPLICATION AND CASE STUDIES

9 Hours

Development of different control block using DCS simulation software – Real time control of test

rings using DCS. Introduction to HART, Field bus and PROFIBUS – Application and case studies of large scale process control using DCS.

Total No of Hours: 45

Text books:

1. John W. Webb and Ronald A Reis, “Programmable Logic Controllers - Principles and Applications”, Prentice Hall Inc., 5th Edition, 2002.
2. Thomas E. Kissell, ‘Industrial Electronics’, PHI, 3rd Edition, 2003.
3. Huges T, ‘Programmable Controllers’, ISA press, 4th Edition, 2005.

Reference books:

- 1.M. P. Lukcas, “Distributed Control Systems”, Van Nostrand Reinhold Co., 1986.
2. Frank D. Petruzella, “Programmable Logic Controllers”, McGraw Hill, 4th Edition, 2010.

Course outcomes:

Upon completion of the course, students will be able to

- Implement low cost automation systems using pneumatic and electrical means.
- Learn about the modern techniques and devices used for the monitoring and control of manufacturing systems including programming of programmable logic controllers and their interfacing with various sensors and actuators.
- Design automated assembly system for industrial applications.

EEPECT - 114	Modern Control Systems	3L:0T:0P	3Credits
---------------------	-------------------------------	-----------------	-----------------

Course Objectives:

- *To understand the basic concepts of modern control theory in relation to the stability of a system.*
- *To co relate the concepts of control theory with the field of electrical engineering*

MODULE I - STATE VARIABLE ANALYSIS

9 Hours

Introduction, concepts of state, state variables and state model, state-space representation for linear continuous-time systems and discrete-time systems. Time, domain solution of state equations: Solution of homogeneous state equations, state transition matrix, evaluation of matrix exponential (eAt), solution of non- homogeneous state equations

MODULE II – STATE SPACE REPRESENTATION**9 Hours**

State-space representation of highorder differential equations, state space representation of transfer function in controllable, observable and diagonal form, relationship between state equations and transfer function. Signal flow graph of state equations, decomposition of transfer function, diagonalization, eigen values and eigen vectors, modal matrix.

MODULE III - CONTROLLABILITY AND OBSERVABILITY**9 Hours**

Concept of Controllability and Observability; Controllability and Observability tests for continuous time system; Controllability and Observability of discrete time system; Controllability and Observability of state model in Jordan canonical form; Loss of Controllability and Observability for sampling

Unit IV - MODELS OF DIGITAL CONTROL DEVICES AND SYSTEMS**9 Hours**

Introduction to z-transform, ROC in z-transform, basic discrete time signals, time domain models of discrete time systems, transfer function models, stability on z-plane and jury stability criteria, z-domain description of sampled continuous time plants, , z-domain description of systems with dead time, Implementation of digital controllers, Tunable PID controllers, Methods of tuning industrial PI, PID controllers

MODULE V - NONLINEAR SYSTEMS**9 Hours**

Introduction, common physical nonlinearities-saturation, dead-zone, relay, relay with dead zone, hysteresis, backlash, etc, jump resonance, limit cycle. Phase-plane analysis-phase plane and phase trajectory, singular points, construction of phase trajectory, evaluation of time, stability analysis.

Total No of Hours: 45**Text Books:**

1. M Gopal “Digital Control & state variables methods”, TMH Company, 2nd Edition, 2006.
2. K. Ogata “Discrete time Control System ”, Prentice Hall, 1995.
3. M Gopal “Modern Control System Theory ”, New Age Publications, 2nd Edition, 2005

Reference Books:

1. Richard C Dorf, “Modern Control Systems ”, Pearson, 14th Edition, 2021
2. C.Kuo “Digital control system”, Oxford University Press 1995.

Course outcomes:

Upon completion of the course, students will be able to

- Gains an appreciation of recent advances in control engineering such as pole assignment, observers design
- Identify the optimal, adaptive techniques.

EEPECT-115	Nano Electronics	3L:0T:0P	3 Credits
-------------------	-------------------------	-----------------	------------------

Course objectives:

To impart knowledge about the following topics of Nano electronics and molecular electronics.

MODULE I - INTRODUCTION TO NANOTECHNOLOGY**9 Hours**

Background to nanotechnology: Types of nanotechnology and nanomachines – periodic table – atomic structure – molecules and phases – energy – molecular and atomic size – surface and dimensional space – top down and bottom up; Molecular Nanotechnology: Electron microscope – scanning electron microscope – atomic force microscope – scanning tunnelling microscope – nanomanipulator– atom manipulation – nanodots – self-assembly – dip pen nanolithography. Nanomaterials: preparation – plasma arcing – chemical vapor deposition – sol-gels – electrodeposition – ball milling.

MODULE II – NANODEVICES**9 Hours**

Fundamentals of logic devices:- Requirements – dynamic properties – threshold gates; physical limits to computations; concepts of logic devices:- classifications – two terminal devices – field effect devices – coulomb blockade devices – spintronics – quantum cellular automata – quantum computing – DNA computer; performance of information processing systems.

MODULE III - SILICON MOSFETs & QUANTUM TRANSPORT DEVICES 9 Hours

Silicon MOSFETS - Novel materials and alternate concepts:- fundamentals of MOSFET Devices- scaling rules – silicon-dioxide based gate dielectrics – metal gates – junctions & contacts – advanced MOSFET concepts.

Quantum transport devices based on resonant tunneling, Electron tunneling – resonant tunneling diodes – resonant tunneling devices; Single electron devices for logic applications, Single electron devices – applications of single electron devices to logic circuits.

MODULE IV- CARBON NANOTUBES

9 Hours

Carbon Nanotube: Fullerenes - types of nanotubes – formation of nanotubes – assemblies – purification of carbon nanotubes – electronic properties – synthesis of carbon nanotubes – carbon nanotube interconnects – carbon nanotube FETs – Nanotube for memory applications – prospects of an all carbon nanotube nanoelectronics.

MODULE V - MOLECULAR ELECTRONICS

9 Hours

Electrodes & contacts – functions – molecular electronic devices – first test systems – simulation and circuit design – fabrication; Future applications: MEMS – robots – random access memory – mass storage devices.

Total No of Hours: 45

Text books:

1. Michael Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons and Burkhard Raguse, Nanotechnology: Basic Science and Emerging Technologies, Chapman & Hall / CRC, 2002
2. T. Pradeep, NANO: The Essentials – Understanding Nanoscience and Nanotechnology, TMH, 2007
3. Rainer Waser (Ed.), Nanoelectronics and Information Technology: Advanced Electronic Materials and Novel Devices, Wiley-VCH, 2003

Reference books:

1. W. Rancier, —Nano Electronics and Information Technology, Wiley, (2003).
2. K.E. Drexler, —Nano systems, Wiley, (1992).
3. M.C. Petty, —Introduction to Molecular Electronics, 1995.

Course outcomes:

Upon completion of the course, students will be able to

- Understand advanced concepts and operating principles of Nano electronic devices.
- Understand specialized methods to fabricate Nano scale devices.
- Gain familiarity with the application of advanced techniques needed to characterize and study reliability of materials and Nano scale electronic devices.

EEPECT - 116	Power System Restructuring and Deregulation	3L:0T:0P	3Credits
---------------------	--	-----------------	-----------------

Course Objectives:

- To understand the electricity power business and technical issues in a restructured power system in both Indian and world scenario.
- To provide the students a systems perspective of modern electricity markets and a systems approach to address various issues faced by the electricity sector.
- To equip the students to understand the need for restructured power system along with electricity market models
- To impart the students with a knowledge on Indian power sector.

MODULE I - DEREGULATED POWER MARKETS**9 Hours**

Introduction – Market Models–Entities– Key issues in regulated and deregulated power markets; Market equilibrium- Market clearing price- Electricity markets around the world- Independent System Operator (ISO)-components-types of ISO - role of ISO.

MODULE II - TECHNICAL CHALLENGES**9 Hours**

Operational and planning activities of a GENCO -Electricity Pricing and Forecasting -Price Based MODULE Commitment Design- Total Transfer Capability – Limitations - Margins – Available transfer capability (ATC) - Ancillary Services - Automatic Generation Control (AGC).

MODULE III - CONGESTION MANAGEMENT**9 Hours**

Introduction-Components of restructured system-Transmission pricing in Open-access system - Open transmission system operation; Congestion management in Open-access transmission

systems- FACTS in congestion management-Open-access Coordination Strategies; Power Wheeling- Transmission Cost Allocation Methods

MODULE IV - ELECTRICITY MARKETS PRICING

9 Hours

Open Access Distribution – Changes in Distribution Operations-The Development of Competition– Maintaining Distribution Planning

MODULE V - INDIAN POWER SECTOR

9 Hours

Electricity act, 2003, challenges and synergies in the use of Indian power sector and Indian power market - Indian energy exchange and power exchange. - Current Scenario – Regions – Regulatory and Policy development in Indian power Sector – Opportunities for IPP and capacity power producer - Indian Electricity Grid Code - Open access issues – Reforms in the near future

Total No of Hours: 45

Text Books:

1. Loi Lei Lai, 'Power System Restructuring and Deregulation', John Wiley & Sons Inc., New York, HRD Edition, 2001.
2. Mohammad Shahidehpour, Hatim Yamin, 'Market Operations in Electric Power Systems', John Wiley & Sons Inc., 2002.
3. Dr. Rajib Mishra, V. K. Khanija and P. P. Wahi, "Indian Power Market (Electricity Marketing Simplified)" Central Board of Irrigation and Power (CBIP), Govt of India, 2016

Reference Books:

1. Mohammad Shahidehpour, Muwaffaq Alomoush, 'Restructured Electrical Power Systems', Marcel Dekker, INC., New York, 1st Edition, 2001.
2. Philipson, L. and Willis, H. L., "Understanding Electric Utilities and Deregulation" 2nd Edition, Florida, MODULE Edition States: CRC Press, 2005

Course Outcomes:

Upon completion of the course, students will be able to

1. Understand the structure of an electricity market in either regulated or deregulated market conditions.

2. Describe the operational activities in Generation, Transmission and Distribution system in the restructured environment
3. Interpret the impact of open access in distribution system.
4. Outline the Indian power sector.

EEPECT-117	Protection and Switchgear	3L:0T:0P	3 Credits
------------	---------------------------	----------	-----------

Course Objectives:

- *To understand the different protection zones and protection schemes in power system.*
- *To impart knowledge on various types of relays including Distance and differential protection schemes.*
- *To impart knowledge on protection schemes for generator, transformer, motor, feeder and transmission lines*
- *To acquire knowledge on various circuit breakers (AC and DC) used in power systems.*
- *To acquaint the various types of surge protection and earthing.*

MODULE I - PROTECTION SCHEMES

9 Hours

Principles and need for protective schemes – Nature and causes of faults – Types of faults – Methods of Grounding - Zones of protection and essential qualities of protection – CTs and PTs and their applications.

MODULE II - RELAYS

9 Hours

Operating Principles of the Relay - Classification of Relays - Universal relay – Torque equation – R-X diagram, Electromagnetic Relays – Over current, IDMT, Directional, Distance, Differential, Negative sequence and under frequency relays, Introduction to static relays, Phase, Amplitude, Comparators –Synthesis of various relays using Static comparators. Microprocessor relay - Applications

MODULE III - APPARATUS AND LINE PROTECTION

9 Hours

Generator Capability Curve – Short circuit Calculations – Ground fault and unbalanced current Protection –Over excitation and Abnormal Frequency Protection - Field winding Protection – Loss of Synchronism – Motor Protection, Transformer Protection – Differential, Inrush and Over Current - Bus zone Protection - Protection of Transmission Lines – Concept of Wide Area Monitoring and Protection.

MODULE IV - CIRCUIT BREAKERS

9 Hours

Functions of switchgear - Principles of arc extinction - Arc control devices - Fuses: types – selection -discrimination – Resistance switching - Recovery voltage and restriking voltage - current chopping and capacitance current breaking – Oil circuit breakers, air break, air blast, and sulphur Hexafluoride and vacuum circuit breakers – HVDC breakers – Rating of Circuit Breaker.

MODULE V - SURGE PROTECTION AND EARTHING

9 Hours

Causes of overvoltage - Lightning phenomenon – Over voltage due to lightning - Protections against lightning -Lightning arresters – Types - Lightning arrester selection - Surge absorbers – Current limiting reactor -Insulation coordination. Solid, resistance and reactance Earthing - Arc suppression coil - Earthing transformers -Earth wires - Introduction to Indian Electricity rules.

Total No of Hours: 45

Text Books:

1. Sunil S. Rao, “Switch Gear Protections”, Khanna Publications, Delhi, 14th Edition, 2019.
2. Bhuvanesh A. Oza, N. C. Nair, R. P. Mehta, V.H. Makwana, “Power System Protection and Switchgear”, Tata McGraw - Hill, New Delhi, 1st Edition, 2017.
3. A. Wright, C. Christopoulos, “Electrical Power System Protection”, Springer, 2nd Edition, 2013.

Reference Books:

1. T. S. Madhav Rao, “Power system protection static relays with microprocessor Applications”, Tata McGraw hill Publication, 15th Edition, 2015.
2. Badri Ram, D. N. Vishwakarma, “Power System Protection and Switchgear”, Tata Mc Graw Hill, 2nd Edition, 2013.

Course Outcomes:

After completion of the course, the students will be able to

- Identify the equipment's for protection scheme on Power Systems.
- Analyze the different applications of the relays in power system.
- Interpret the protection of transformer, Bus bar and transmission line.
- Comprehend the various circuit breakers (AC and DC) used in power system.
- Analyze the protection against over voltages and working of lightning arrester.

EEPECT – 118	Smart Grid	3L:0T:0P	3Credits
---------------------	-------------------	-----------------	-----------------

Course Objectives:

- *To familiarize with the fundamentals of smart grids technologies.*
- *To get exposure on Communication infrastructure and protocols.*
- *To study about the Wide Area Measurement Systems, Energy storage technologies for smart grid.*
- *To know about the various stability assessment tools in smart grid.*
- *To familiarize with the Power Quality issues of Grid connected Renewable Energy Sources.*

MODULE I – INTRODUCTION TO SMART GRID

9 Hours

Evolution of Electric Grid, Concept, Definitions and Need for Smart Grid, Smart grid drivers, functions, opportunities, challenges and benefits, Difference between conventional & Smart Grid, National and International Initiatives in Smart Grid.

MODULE II – SMART GRID TECHNOLOGIES

9 Hours

Technology Drivers, Smart energy resources, Smart substations, Substation Automation, Feeder Automation, Transmission systems: EMS, FACTS and HVDC, Wide area monitoring, Protection and control, Distribution systems: DMS, Volt/VAR control, Fault Detection, Isolation and service restoration, Outage management, High-Efficiency Distribution Transformers, Phase Shifting Transformers, Plugin Hybrid Electric Vehicles(PHEV).

MODULE III – SMART METERING AND COMMUNICATION

9 Hours

Smart meters – Communications infrastructure, protocols and hardware – Automatic Meter Reading (AMR) and Advanced Metering Infrastructure (AMI) drivers – benefits – Power line communication (PLC) – Machine to-machine communication models – Home Area Networks (HAN), Wide Area Networks (WAN) and Neighborhood Area Networks (NAN) – Wired and Wireless communication technologies – Cryptosystem – Internet of things (IOT).

MODULE IV- INTEGRATION, CONTROL AND OPERATION OF DISTRIBUTED GENERATION

9 Hours

Distributed Generation Technologies – benefits – Utilization Barriers – integration to power grid – Renewable Energy Technologies – Micro grids – Storage Technologies – Advantages and disadvantages of DG – Vehicle to Grid technology and Grid to vehicle technology – Performance and stability analysis in smart grid.

MODULEV – POWER QUALITY MANAGEMENT IN SMART GRID 9 Hours

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit

Total no. of Hours : 45

Text Books:

1. Janaka Ekanayake, Kithsiri Liyanage, Jianzhong Wu, Akihiko Yokoyama, Nick Jenkins, “Smart Grid Technology and Applications”, John Wiley and Sons Publication, 1st Edition, 2015.
2. Stuart Borlase, “Smart Grids: Infra structure, Technology and Solutions”, CRC Press, 1st Edition, 2013.
3. James A. Momoh, “Smart Grid: Fundamentals of Design and Analysis”, Wiley-IEEE Press, 1st Edition, 2012.

Reference Books:

3. Jean Claude Sabonnadiere, NouredineHadjsaid, “Smart Grids”, Wiley Blackwell, 1st Edition, 2012
4. Fereidoon. P. Sioshansi, “Smart grid – integrating renewable, distributed and efficient energy”, Academic Press, 1st Edition, 2011.

Course Outcomes:

After completion of the course, the students will be able to

- Compare the conventional electrical grid concepts with smart grid.
- Outline about the protocols and networks used in Smart grid.
- Explain the importance of WAM and energy storage technologies used in smart grid.
- Acquire knowledge on distributed generation and micro grids in smart grid.
- Analyze the power quality issues in smart grid.

EEPECT-119	Special Electrical Machines	3L:0T:0P	3 Credits
-------------------	------------------------------------	-----------------	------------------

Course objectives:

- The objective of the course is to explore the students to the construction, principle of operation and performance of special electrical machines as an extension to the study of basic electrical machines.

- The main objective is to impart knowledge on constructions, working and performance of fractional HP machines, switched reluctance motor, PMSM and PMBL DC motors, construction, working and principle of operation, control and closed loop operation of stepper motors.

MODULE I - STEPPER MOTORS

9 Hours

Constructional features-principle of operation-Types of motors– Modes of operation–Drive system and circuit control of Stepper motor –Static and Dynamic Characteristics and Applications.

MODULE II- SWITCHED RELUCTANCE MOTORS

9 Hours

Constructional details-principles of operation- Static and dynamics Torque production–drive circuits–Current regulation–Torque speed characteristics– Speed and torque control– Static observers for rotor position sensing– volt- ampere requirements– Applications.

MODULE III - SYNCHRONOUS RELUCTANCE MOTORS

9 Hours

Constructional features – Types – Axial and radial air gap motors – Operating principle – Reluctance– Phasor diagram-Characteristics – Vernier motor.

MODULE IV - PERMANENT MAGNET BRUSHLESS DC MOTORS

9 Hours

Commutation in DC motors– Difference between mechanical and electronic commutators– Principle of operation- Construction and drive circuits–Torque and emf equation– Torque and Speed characteristics– sensors and sensor less systems– controllers and applications.

MODULE V - PERMANENT MAGNET SYNCHRONOUS MOTORS

9 Hours

Principles of operation–Constructional features– Phasor diagram–torque speed characteristics – torque and emf equations–vector controllers- applications. Doubly Fed Induction Generator– Principle – construction, characteristics and applications.

Total No of Hours: 45

Text books:

1. P.P.Acarney, "Stepping Motors, A Guide to Modern theory and practice", Peter Peregrines, London, 2002.
2. Venkataratnam K, "Special Electrical Machines", Universities Press, Hyderabad, 3rd Edition 2009.
3. R.K.Rajput, "Electrical Machines "Laxmi Publications, New Delhi, 2009

Reference books :

1. A. Hughes, "Electric Motors and Drives", Affiliated East-West Press Pvt., Ltd., 2007
2. R. Krishnan, "Electric Motor Drives Modeling, Analysis, and Control" Prentice Hall of India Pvt Ltd, 2003.

Course outcomes:

- To Maintain different types induction machines for different applications
- To Maintain different types synchronous machines for different applications
- To Maintain different types of fractional horsepower motors
- To Maintain various types of Small specialized electric machines.

EEPECT-120	Wind and Solar Electrical Systems	3L:0T:0P	3 Credits
------------	-----------------------------------	----------	-----------

Course Objectives:

- *To study the concepts of wind energy system*
- *To understand the new developments in solar energy system*
- *To provide students with a solid foundation in mathematical, scientific and engineering fundamentals required to solve wind and solar energy problems*
- *To discuss the solar thermal power generation*
- *To identify the network integration issues*

MODULE I – FUNDAMENTALS OF WIND ENERGY SYSTEM**9 Hours**

Wind source–wind statistics–energy in the wind –turbine power characteristics - aerodynamics – rotor types – parts of wind turbines– braking systems–tower- control and monitoring system. General characteristics of induction generators– grid-connected and self-excited systems–steady state equivalent circuit–performance predetermination–permanent magnet alternators–steady-state performance

MODULE II- WIND ENERGY CONVERSION**9 Hours**

Wind resources – Nature and occurrence of wind – Power in the wind – Wind characteristics – Principles of wind energy conversions – Components of wind energy conversion system (WECS) – Classification of WECS – Advantages and disadvantages of WECS.

MODULE III - SOLAR CONCENTRATING COLLECTORS

9Hours

Concentrating collectors – types – reflectors – solar thermal power stations – principle and applications – Solar energy storage systems – thermal – sensible and latent heat, chemical, electrical, electro-magnetic energy storage – selection of materials for energy storage – Solar distillation – application – Solar stills – types – Solar pond – performance – characteristics - applications – Solar refrigeration.

MODULE IV - PHOTO VOLTAIC ENERGY CONVERSION SYSTEM

9 Hours

Basic photo voltaic system for power generation – Advantages and disadvantages of photo voltaic solar energy conversion –Application of solar photo voltaic system – Components of PV systems- Design of PV systems- Power conditioning and storage arrangement – Maximum power point tracking (MPPT) - Introduction to string inverters.

MODULE V - RECENT ADVANCEMENTS IN WIND AND PV SYSTEMS

9 Hours

Wind farms and grid connections – Grid related problems on absorption of wind – Grid interfacing arrangement – Operation, control and technical issues of wind generated electrical energy – Interconnected operation – Hybrid systems. Recent Advances in PV Applications: Building Integrated PV systems, Grid Connected PV systems, Hybrid systems, solar cars, solar energy storage system and their economic aspects.

Total No of Hours: 45

Text books:

1. G.N. Tiwari, “Solar Energy: Fundamentals, Design, Modeling & Application”, Narosa Publishing House, 2013.
2. G.D. Rai, “Non-conventional Energy Resources”, Sixth Ed., Khanna Publishers, 2018.
3. D.S.Chauhan, S.K. Srivastava, “Non – Conventional Energy Resources”, New Age Publishers, 3rd Edition, 2012.

Reference books:

1. T. Ackermann, Wind Power in Power Systems, John Wiley and Sons Ltd., 2005.
2. D.P.Kothari and K.C.Singhal, “Renewable Energy Sources and Emerging Technologies”, P.H.I. 2nd Edition, 2011.

Course outcomes:

- Understand the basics of wind energy conversion systems & solar energy conversion systems. Implement the appropriate power extraction techniques.
- Apply power electronics to the renewable energy systems.
- Understand the grid integration techniques, and power quality issues.
- Apply the technology & techniques in variety of applications.

**OPEN ELECTIVES
(OE)**

EEOET-101	Analog and Digital Electronics	3L:0T:0P	3 Credits
------------------	---------------------------------------	-----------------	------------------

Course Objectives:

- To understand the concepts of analog and digital circuits.
- To impart knowledge on signal generation and measuring equipment.

MODULE I - ANALOG DEVICES

9 Hours

Review of analog devices – Rectifier circuits - Wave shaping circuits - Clippers and Clampers – Regulators - Zener and op-amp based regulator circuits - Introduction to switched mode power supplies.

MODULE II - DIGITAL COMPONENTS

9 Hours

Review of digital components - Code converters- Programmable logic devices- CPLDs and FPGAs- Introduction to hardware description languages.

MODULE III - OSCILLATORS & SIGNAL GENERATOR CIRCUITS

9 Hours

Function generator circuit - Pulse generator circuit - AM/FM signal generator circuit – Qualitative analysis.

MODULE IV - DISPLAY UNITS

9 Hours

Display Units - optoelectronic devices – Seven-segment displays - LCD and LED display units and applications.

MODULE V - SPECIAL ELECTRONIC CIRCUITS

9 Hours

UJT Sawtooth generator circuit – Schmitt trigger – Analog-to-digital converter – Digital-to-analog converter circuits.

Text Books:

1. David A Bell, 'Fundamentals of Electronic Devices and Circuits', Oxford University Press, Incorporated, 25- Jun-2009.
2. Bouwens A. J., 'Digital Instrumentation', Tata McGraw Hill Publications, 16th Reprint (2008).

Reference Books:

1. Kalsi H.S, 'Electronic Instrumentation', Tata McGraw-Hill Education, 3rdEdition, 2010.
2. Morris Mano.M, 'Digital Logic and Computer Design', Prentice Hall of India, 3rdEdition, 2005.

Course Outcomes:

Upon completion of the course, the student will be able to

- Design and develop circuits using analog and digital components.
- Understand the different generators and analyzers.
- Appreciate the use of display units.
- Identify the suitable oscilloscope for measurement.

EEOET-102	Basics of Electrical Circuits	3L:0T:0P	3 Credits
------------------	--------------------------------------	-----------------	------------------

Course Objectives:

To make the student learn about

- *Basic characteristics of R, L, C parameters, their Voltage and Current Relations and Various combinations of these parameters.*
- *The Single-Phase AC circuits and concepts of real power, reactive power, complex power, phase angle and phase difference*
- *Series and parallel resonances, bandwidth, current locus diagrams*
- *Network theorems and their applications*
- *Network Topology and concepts like Tree, Cut-set, Tie-set, Loop, Co-Tree.*

MODULE I - INTRODUCTION TO ELECTRICAL & MAGNETIC CIRCUITS 9 Hours

Electrical Circuits: Circuit Concept – Types of elements – Source Transformation-Voltage – Current Relationship for Passive Elements. Kirchhoff's Laws – Network Reduction Techniques-Series, Parallel, Series Parallel, Star-to-Delta or Delta-to-Star Transformation. Examples
Magnetic Circuits: Faraday's Laws of Electromagnetic Induction-Concept of Self and Mutual Inductance-Dot Convention-Coefficient of Coupling-Composite Magnetic Circuit-Analysis of Series and Parallel Magnetic Circuits, MMF Calculations.

MODULE II - NETWORK TOPOLOGY**9 Hours**

Definitions – Graph – Tree, Basic Cutset and Basic Tieset Matrices for Planar Networks – Loop and Nodal Methods of Analysis of Networks & Independent Voltage and Current Sources – Duality & Dual Networks.Nodal Analysis, Mesh Analysis.

MODULE III - SINGLE PHASE A.C CIRCUITS

9 Hours

R.M.S, Average Values and Form Factor for Different Periodic Wave Forms – Sinusoidal Alternating Quantities – Phase and Phase Difference – Complex and Polar Forms of Representations, j-Notation, Steady State Analysis of R, L and C (In Series, Parallel and Series Parallel Combinations) with Sinusoidal Excitation Resonance – Phasor diagrams – Concept of Power Factor- Concept of Reactance, Impedance, Susceptance and Admittance-Apparent Power, Active and Reactive Power, Examples.

MODULE IV - NETWORK THEOREMS

9 Hours

Superposition, Reciprocity, Thevenin's, Norton's, Maximum Power Transfer, Millmann's, Tellegen's, and Compensation Theorems for D.C and Sinusoidal Excitations.

MODULE V - THREE PHASE A.C. CIRCUITS

9 Hours

Introduction – Analysis of Balanced Three Phase Circuits – Phase Sequence- Star and Delta Connection –Relation between Line and Phase Voltages and Currents in Balanced Systems – Measurement of Active and Reactive Power in Balanced and Unbalanced Three Phase Systems. Analysis of Three Phase Unbalanced Circuits – Loop Method – Star Delta Transformation Technique – for balanced and unbalanced circuits – Measurement of Active and reactive Power – Advantages of Three Phase System.

Text Books:

1. Circuit Theory Analysis & Synthesis A. Chakrabarti, Dhanpat Rai & Sons, 7th Revised Edition, 2018.
2. Fundamentals of Electric Circuits Charles K. Alexander and Matthew. N. O. Sadiku, Mc Graw Hill, 5th Edition, 2013.
3. Engineering circuit analysis William Hayt and Jack E. Kemmerly, Mc Graw Hill Company, 7th Edition, 2006.

Reference Books

1. Electrical Engineering Fundamentals V. Del Toro, Prentice Hall International, 2nd Edition, 2019.
2. Electric Circuits- Schaum's Series, Mc Graw Hill, 5th Edition, 2010

Course Outcomes:

After completing the course, the student should be able to

- Determine the current through any element and voltage across and power through any element.
- Determine the real power, reactive power, power factor etc.,
- Apply the network theorems suitably
- Develop the Cut Set and Tie-set Matrices for a given Circuit. Also understand various basic definitions and concepts

EEOET-103	Control System Engineering	3L:0T:0P	3 Credits
-----------	----------------------------	----------	-----------

Course Objectives:

- *To provide the use of transfer function models for analysis of physical systems.*
- *To provide adequate knowledge in the time response of systems and error analysis.*
- *To provide basic knowledge for obtaining the open loop and closed-loop frequency responses of systems.*
- *To get an exposure in the design of P/I/D controllers.*
- *To introduce about the state variable representation and stability analysis.*

MODULE I-MODELING OF LINEAR TIME INVARIANT SYSTEMS**9 Hours**

Control systems - Open loop and Closed loop – Feedback control system characteristics - Mathematical modeling of Electrical, Mechanical and Electro-Mechanical systems - electrical analogues systems - Block diagrams reduction techniques - Signal flow graphs - Transfer functions.

MODULE II- TIME DOMAIN ANALYSIS**9 Hours**

Standard test signals – Transient analysis of first and second order systems using step input - Time responses –Time domain specifications – Error Analysis - Stability analysis - Concept of stability – Routh Hurwitz stability criterion - Root locus Techniques - Effect of adding poles and zeros.

MODULE III - FREQUENCY DOMAIN ANALYSIS

9 Hours

Frequency response analysis – Correlation between frequency response and time-response analysis - frequency domain specifications - Bode plot - Polar plot - Nyquist stability criterion.

MODULE IV- CONTROLLER DESIGN

9 Hours

Introduction to controllers - P-I-D controllers - Tuning methods - Ziegler-Nichol's Tuning - Performance criteria –Compensator design - Lead, Lag, Lead-Lag compensation using Bode Plot.

MODULE V- STATE VARIABLE ANALYSIS

9 Hours

State Space Representation, Concept of state variables – State models for linear and time invariant Systems –Controllable, Observable, Jordan Canonical Forms - Solution of State Equation, State Transition Matrix –controllability and observability – Transfer function to State space model.

Text Books

1. I. J. Nagarath and M. Gopal, "Control Systems Engineering", New Age International Publishers, 6th Edition (Multi colour Edition), 2018.
2. Katsuhiko Ogata, "Modern Control Engineering", Pearson, 5th Edition, 2015.
3. Benjamin C. Kuo, "Automatic Control Systems", PHI Learning Private Ltd, 9th Edition 2014.

Reference Books

1. Richard C. Dorf and Robert. H. Bishop, "Modern Control Systems", Pearson Education, 12th Edition, 2011.
2. John J. D'Azzo, Constantine H. Houpis and Stuart N. Sheldon, "Linear Control System Analysis and Design with MATLAB", CRC Taylor and Francis Reprint, 6th Edition, 2014.

Course Outcomes

After completion of the course, the students will be able to

- Develop the transfer function for the block diagram / signal flow graph model of electrical / mechanical / electro-mechanical systems.
- Analyze the performance of control system using time-domain approach.
- Analyze performance characteristics of system using Frequency response methods.
- Design P/I/D controllers for the System in order to meet design specifications.
- Express the control systems into state space models and analyze the performance of the system

EEOET-104	Electric Power Utilization	3L:0T:0P	3 Credits
------------------	-----------------------------------	-----------------	------------------

Course Objectives:

To understand the principles of operation and utilization of power in domestic and industrial appliances.

MODULE I - ILLUMINATION

9 Hours

Terminology, Laws of illumination, lighting calculations. Electric lamps – Different types of lamps, LED lighting and Energy efficient lamps, Design of lighting schemes - factory lighting - flood lighting – street lighting.

MODULE II - REFRIGERATION

9 Hours

Domestic refrigerator and Air coolers, Air-Conditioner – circuit diagram, types and principle of operation.

MODULE III - DOMESTIC UTILIZATION OF ELECTRICAL ENERGY

9 Hours

House wiring, Induction based appliances, Online and OFF-line UPS, Earthing – domestic, industrial and sub-station.

MODULE IV- ELECTRIC HEATING

9 Hours

- Types of heating and applications, Electric furnaces - Resistance, inductance and Arc Furnaces, Electric welding and sources of welding.

MODULE V - ELECTRIC DRIVES AND TRACTION SYSTEM

9 Hours

Type of drives and loads, Rating and heating of the motors, Types of Traction, Speed-Time curves, recent trends in traction.

Total no. of Hours: 45

Text Books:

1. Uppal S.L. and Prof. S. Rao, 'Electrical Power Systems', Khanna Publishers, New Delhi, 2009.
2. Rajput R.K., 'Utilisation of Electrical Power', Laxmi Publications, 1st Edition, 2007.
3. N.V Suryanarayana, 'Utilization of Electric Power' New Age International Publishers, Reprinted 2005.

Reference Books:

1. C.L.Wadhwa, 'Generation, Distribution and Utilization of Electrical Energy', New Age International Publishers, 4th Edition, 2011.
2. Gupta, J.B., 'Utilisation of Electrical Energy and Electric Traction', S.K.Kataria and Sons, 10th Edition, 1990.

Course Outcomes:

Upon completion of the course, the student will be able to

- Develop a clear idea on various illumination techniques and hence design lightening scheme for specific applications.
- Construct an electric connection for any domestic appliance like refrigerator and air conditioner units.
- Evaluate domestic wiring connection and debug any faults occurred.
- Identify an appropriate method of heating and welding for any particular industrial application.
- Realize the appropriate type of electrical supply system as to evaluate the performance of tractions and electrical drives.

EEOET-105	Electrical Machines	3L:0T:0P	3 Credits
------------------	----------------------------	-----------------	------------------

Course Objectives:

- *To understand the performance characteristics of Transformers.*
- *To equip the students to test and analyze the characteristics of DC machines.*
- *To get familiar with performance characteristics of AC machines*
- *To get familiar with performance characteristics of Special machines*
- *To equip the students to analyze the utilization of different home appliances.*

MODULE I – TRANSFORMERS

9 Hours

Transformers - Principle of operation – Single Phase transformer – Equivalent circuit – Regulation – Losses and Efficiency – Introduction to 3 phase transformers – Autotransformers.

MODULE II – DC MACHINES

9 Hours

Construction, Principles of operation of DC Generators – types - EMF equation – No load and Load characteristics of series and shunt generators – DC motor – Torque – Speed – Torque characteristics of series and shunt motors – Speed control methods and application.

MODULE III – AC MACHINES

9 Hours

Principle of operation of 3-phase Induction Motor – Torque, slip characteristics – Speed control methods – Single-phase Induction motor starting methods – Principle of operation of Alternators.

MODULE IV – SPECIAL MACHINES**9 Hours**

Servo motor – DC and AC servomotors; stepper motors – variable reluctance and permanent magnet stepper motors; single phase synchronous motor – reluctance motor and hysteresis motor – universal motor – Repulsion motor – synchronous motor.

MODULE V – UTILISATION**9 Hours**

Domestic wiring – principle of electrical heating – The laws of illumination – Electric lamps – Photometers – Electroplating – Electric Traction – Air conditioning – Earthing.

Total no. of Hours: 45**Text Books:**

1. B.L. Theraja, “Electrical Technology Vol.II AC/DC Machines”, S. Chand, 2008
2. A.Chakrabarti, M.I.Soni, P.V.Gupta, “Textbook on power systems engineering”, Dhanpat Rai, 2008.
3. G.C.Garg, “Utilisation of Electric power and electric traction” Khanna Publications (p) Ltd, Delhi, 2006.

Reference Books:

1. Battacharya S K, “Electrical Machines”, Technical Teachers Training institute”, 2nd Edition 2003.
2. S.L.Uppal, “Electrical power” Khanna Publications (p) Ltd, Delhi, 2002.

Course Outcomes:

After completion of the course, the students will be able to

- Analyze the performance of transformers under various operating conditions using their characteristics.
- Interpret the efficiency of DC machines by conducting Suitable tests.
- Interpret the efficiency of AC machines by conducting Suitable tests.
- Understand the concepts of special machines.
- Analyze the utilization of different home appliances

EEOET-106	Power Electronics in Power systems	3L:0T:0P	3 Credits
-----------	------------------------------------	----------	-----------

Course objectives:

- To introduce characteristics of power electronic devices, design of various power converter circuits and speed control concepts of AC and DC drives.
- To understand the different power converters for renewable energy systems
- To gain knowledge on stand-alone and grid connected renewable energy systems.

MODULE I – POWER CONVERTER**9 Hours**

Power Semiconductor Devices - Power Converters – AC to DC, AC to AC converters. - PWM based Power Converters: DC to DC, DC to AC converters.

Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing.

MODULE II – DRIVE SYSTEM**9 Hours**

Introduction to motor drives – Solid-state speed control of DC motor drive system. - Solid-state speed control of induction motor drive system.

MODULE III- RENEWABLE ENERGY CONVERSION**9 Hours**

Environmental aspects of electric energy conversion – impacts of renewable energy generation on environment – qualitative study of different renewable energy resources – Modeling and analysis of Doubly Fed Induction Generator – Permanent Magnet Synchronous Generator – Squirrel Cage Induction Generator.

MODULE IV -ANALYSIS OF WIND AND PV SYSTEMS**9 Hours**

Stand-alone operation of fixed and variable speed wind energy conversion systems and solar system- Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system

MODULE V - HYBRID RENEWABLE ENERGY SYSTEMS**9 Hours**

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking

Total No of Hours: 45**Text Books:**

1. M.D.Singh and K.B.Kanchandhani, 'Power Electronics', Tata McGraw-Hill Publishing Company Limited, 2nd Edition, 2006.
2. K. Venkataratnam, "Special Electrical Machines", Universities Press, 1st Edition, 2008.
3. M. H. Rashid, "Power Electronics Hand book", Academic press, 4th Edition, 2017.

Reference Books:

1. Andrzej M. Trzynadlowski, "Introduction to Modern Power Electronics", Wiley, India Pvt. Ltd, 2nd Edition, 2012.
2. P.S. Bimbhra, 'Power Electronics', Khanna Publishers, 3rd Edition, 13th Reprint, 2004.

Course outcomes:

- Understand the principle of operation of commonly employed power electronic converters.
- Analyze non -linear circuits with several power electronic switches.
- Design different power converters for renewable energy systems.
- Analyze standalone and grid connected operating modes of wind, solar energy systems.
- Implement maximum power point tracking algorithm and gain knowledge on hybrid systems.

EEOET-107	Introduction to Robotics and Automation	3L:0T:0P	3 Credits
------------------	--	-----------------	------------------

Course Objectives:

- To design automatic manufacturing cells with robotic control.
- To understand the electronic control system in metal machining and other manufacturing process.
- To understand the features and operation of automation products.
- To understand ethical and professional responsibilities
- To communicate effectively and work in interdisciplinary groups

MODULE I - ROBOT BASICS

9 Hours

Robot-Basic concepts, Need, Law, History, Anatomy, specifications. Robot configurations- cartesian, cylinder, polar and articulate. Robot wrist mechanism, Precision and accuracy of robot. Robot elements end effectors-Classification, Types of Mechanical actuation, Gripper design, Robot drive system Types, Position and velocity feedback devices-Robot joints and links-Types, Motion

interpolation.

MODULE II – ROBOT KINEMATICS AND CONTROL

9 Hours

Robot kinematics – Basics of direct and inverse kinematics, Robot trajectories, 2D and 3D Transformation-Scaling, Rotation, Translation Homogeneous transformation. Control of robot manipulators – Point to point, Continuous Path Control, Robot programming

MODULE III – ROBOT SENSORS

9 Hours

Sensors in robot – Touch Sensors-Tactile sensor – Proximity and range sensors. Force sensor-Light sensors, Pressure sensors, Introduction to Machine Vision and Artificial Intelligence.

MODULE IV - FUNDAMENTAL CONCEPTS OF INDUSTRIAL AUTOMATION 9 Hours

Fundamental concepts in manufacturing and automation, definition of automation, reasons for automating. Types of production and types of automation, automation strategies, levels of automation.

MODULE V - TRANSFER LINES AND AUTOMATED ASSEMBLY

9 Hours

General terminology and analysis, analysis of transfer lines without storage, partial automation. Automated flow lines with storage buffers. Automated assembly-design for automated assembly, types of automated assembly systems, part feeding devices, analysis of multi-station assembly machines. AS/RS, RFID system, AGVs, modular fixturing. Flow line balancing.

Total no. of Hours: 45

Text Books:

1. Mikell P Groover, "Industrial Robots – Technology Programmes and Applications", McGraw Hill, New York, USA. 2000.
2. Deb.S.R and Sankha Deb, "Robotics Technology and Flexible Automation", Tata McGraw Hill Publishing Company Limited, 2010.
3. Klafter.R.D, Chmielewski.T.A, and Noggin's., "Robot Engineering: An Integrated Approach", Prentice Hall of India Pvt. Ltd., 1994

Reference Books:

1. Fu.K.S, Gonzalez.R.C&Lee.C.S.G, "Robotics control, sensing, vision and intelligence", Tata-McGraw Hill Pub. Co., 2008
2. Yu. "Industrial Robotics", MIR Publishers Moscow, 1985.

Course Outcomes:

Upon the completion of this course the student will be able to

- Design automatic manufacturing cells with robotic control.
- Understand the electronic control system in metal machining and other manufacturing process.
- Understand the features and operation of automation products.
- Understand ethical and professional responsibilities
- Communicate effectively and work in interdisciplinary groups

EEOET-108	Power System Engineering	3L:0T:0P	3 Credits
------------------	---------------------------------	-----------------	------------------

Course Objectives:

To impart knowledge on power generation, transmission, distribution and protection systems, and overview of power system economics and regulations.

MODULE I - OVERVIEW OF GENERATION SYSTEMS 9 Hours

Sources of Energy, Steam, Diesel, Nuclear and Hydro power plants – site selection - Layout – essential components and operation.

MODULE II- MODES OF TRANSMISSION AND DISTRIBUTION 9 Hours

HVAC and HVDC Transmission system – overhead lines – towers, conductors and insulators, underground cables – types – laying methods and fault location, comparison of over-head and underground systems, distribution system – classification – components, power factor correction.

MODULE III - BASIC PROTECTION AND SWITCHGEARS 9 Hours

System faults and abnormal conditions, system grounding, need for protection system, overview of apparatus protection, switch gear mechanisms – fuse, switch, isolator and circuit breakers.

MODULE IV- ECONOMICS ON POWER SYSTEMS 9 Hours

Factors affecting cost of generation – load curve – load factor – diversity, base load and peak load stations – reduction of generation cost by interconnection of stations, price of electricity – types of tariff for HT and LT consumers.

MODULE V - REGULATION / ELECTRICITY ACT**9 Hours**

Evolution of Indian electricity act – regulator commissions, grid code, Introduction to restructuring of power system – GenCo, TransCo and DisCo, Independent power producers, Introduction to smart grid.

Total no. of Hours: 45**Text Books:**

1. R K Rajput, 'Power System Engineering', Laxmi Publications Ltd., 2006.
2. A Chakrabarti, M L Soni, P V Gupta and U S Bhatnagar, 'Power System Engineering', Dhanpat Rai & Co., Ltd., 2010.
3. S N Singh. 'Electric Power Generation, Transmission and Distribution', PHI Publications, 2008.

Reference Books:

1. B.R. Gupta, 'Power System Analysis and Design', S. Chand Limited, 5th Edition, 2008.
2. Hadi Saadat, "Power System Analysis", Tata McGraw Hill Education Pvt. Ltd., New Delhi, 21st Reprint, 2010.

Course Outcomes:

Upon the completion of this course the student will be able to

- Illustrate the layout and operation of various power plants.
- Infer the modes of transmission and distribution of electrical energy.
- Select the appropriate protection scheme for various power apparatus.
- Identify tariff structure and calculate the energy pricing.
- Discuss about Indian electricity act and regulations.

EEOET-109	Energy Engineering	3L:0T:0P	3 Credits
------------------	---------------------------	-----------------	------------------

Course Objectives:

- To impart knowledge on various energy sources.
- To gain adequate knowledge on Conventional Energy Sources
- To outline about the Hydro and Ocean Energy Electric Technologies

- To provide knowledge on Wind, Solar Energy and DG Technologies.
- To provide knowledge on Energy Conservation And Management

MODULE I - ENERGY RESOURCES

9 Hours

Perspective of energy resources- Forms of Energy- World's energy status- Energy reserves of India- India's Power Scenario- Renewable Energy Sources- Energy parameters- Energy Intensity Gross Domestic product.

MODULE II - CONVENTIONAL ENERGY SOURCES

9 Hours

Coal fired steam thermal power plant– layout, working principle- Gas turbine power plant–various options, layout, working principle- Nuclear power plants: fuels, nuclear fuel cycle, reactors, nuclear power plant, and nuclear waste management.

MODULE III - HYDRO AND OCEAN ENERGY ELECTRIC TECHNOLOGIES

9 Hours

Hydro Electric plants – Types, energy conversion schemes, power equation, environmental aspects– Hydro-Thermal co-ordination-Ocean Energy Technology- Power plant-limitations.

MODULE IV - WIND, SOLAR ENERGY AND DG TECHNOLOGIES

9 Hours

Wind turbine types and construction– wind energy conversion systems- grid connection environmental aspects. Solar energy basics- Solar PV plant- Distributed Generation- Impacts Benefits.

MODULE V - ENERGY CONSERVATION AND MANAGEMENT

9 Hours

Principle of energy conservation- waste heat recovery –Heat Exchanger– Economics of energy Conservation-co generation- Definition and Objectives of Energy Management, Energy Management System, Top management support, Energy policy purpose, Roles and responsibilities of energy manager.

Total no. of Hours: 45

Text books:

1. S.Rao and Dr.B.B.parulekar, "Energy Technology", Khanna pub., Third edition, 1999.
2. Non-conventional energy resources by B.H.Khan, TMH, 2006.
3. Desai, AV, "Energy Demand: Analysis, Management and Conservation", Wiley Eastern Limited, 1990.

Reference books:

1. G.D.Rai, "Non-conventional energy sources", Khanna pub. Fourth Edition, 2002.
2. Abbasik "Renewable Energy Sources and their Environment", PHI, 2008.

. Course Outcomes:

After completion of the course, the students will be able to

- Analyze the national and international energy scenario of renewable energy Sources.
- Design the aerodynamics of wind turbines and calculate their energy production.

- Analyze electrical power generation from biomass, geothermal, tidal, wave etc.
- Analyze technical and sustainability issues involved in the integration of renewable energy systems
- Compare the cost economics of using renewable energy sources with non-renewable energy sources.

EEOET-110	Sensors and Transducers	3L:0T:0P	3 Credits
------------------	--------------------------------	-----------------	------------------

Course Objectives:

- *To introduce students to the principle of various Transducers, their construction, applications and principles of operation, standards and units of measurements.*
- *To provide students with opportunities to develop basic skills in the design of electronic equipment.*

MODULE I - INTRODUCTION

9 Hours

Transducers and sensors- Accuracy and precisions, types of errors, statistical analysis, probability of errors, limiting errors, sensitivity, linearity, hysteresis, resolution, reproducibility, transfer function.

MODULE II - ANALOG SIGNAL CONDITIONING

9 Hours

Signal conditioning, Loading effects, Bridges for measurement techniques, Wheatstone, Wein, Kelvin's, Maxwell bridge and Hey bridge, Attenuators and Amplifiers, Passive filters, Op-amp based signal conditioning circuits, Inverting and Non-Inverting Amplifiers, Linearization, Differential amplifiers and Instrumentation amplifiers.

MODULE III - DIGITAL SIGNAL CONDITIONING

9 Hours

Digital measuring techniques, Sample and Hold Circuits, Comparator, Buffers, D/A Conversion and A/D Conversion, Weighted Resistor DAC, R-2R ladder DAC, Dual Slope, Parallel-comparator Successive Approximation ADC techniques, Single channel and multi-channel Data Acquisition System (DAS).

MODULE IV - TEMPERATURE SENSORS

9 Hours

Resistance Vs Temperature characteristics for different materials, Thermistors, Thermo-couples - thermo electric effects for thermo couples, thermocouple tables, RTD, Other Thermal Sensors.

MODULE V – TRANSDUCER MEASUREMENT

9 Hours

Capacitive and inductive transducers, Displacement Sensor (LVDT), Strain Sensors – strain gauges, its principle, applications, types of strain gauges, Load cells, Piezo-electric sensors, Motion sensors.

Total no. of Hours: 45

Text Books:

1. Sensors and Transducers Ian R. Sinclair Newnes 3 rd Edition, 2001.
2. Electronic Instrumentation – by H S Kalsi TMH 2nd Ed 2004.
3. Shawhney A.K. "A Course In Electrical and Electronics Measurements and Instrumentation", Dhanpat Rai & Sons, 11th Ed., 1999.

Reference Books:

1. Curtis D. Johnson, "Process Control Instrumentation Technology", Prentice Hall India.
2. D.V.S. Murty, "Transducers and Instrumentation", Prentice Hall India.

Course Outcomes:

At the end of this course students will be able to:

- Understand the terminology of Instrumentation and analyze various sensors.
- Able to apply signal conditioning for measurements.
- Explain various measurements techniques for industrial applications based on transducers.

EEOET-111	Power Plant Engineering	3L:0T:0P	3 Credits
-----------	-------------------------	----------	-----------

Course Objectives:

- *To understand the basic knowledge of various types of power plants and the factors considered for site selection*
- *To have a clear idea about the operation of Steam Power Plants with detailed study of the associated equipment's and machineries*
- *To know the working principle, basic components and various modern reactors of the nuclear power plants*
- *To get a clear knowledge about how power is generated using diesel, gas and combined cycle power plants*
- *To know the importance in selection of equipments and various tariff structures involved with power plants.*

MODULE I - INTRODUCTION**9 Hours**

Conventional and Non-Conventional Sources of Energy and their availability in India -Different Types of Power Plants - Choice of Power Generation - Basic schemes and constituents of Steam, Nuclear, Diesel and Gas Turbine power stations - Factors to be considered for selection of site - Power Plants in India.

MODULE II - STEAM POWER PLANTS**9 Hours**

Layout and types of Steam Power Plants - Fuel and Ash handling systems - Dust collectors – combustion equipment for steam boilers – Economizer and Air pre heater - Mechanical stokers – Pulverizers – Electrostatic precipitator – Draughts – Steam condensers - Cooling Ponds and Cooling Towers - Pollution Controls - Methods of Feed water treatment – Generating efficiency - Power generation capacities of various plants in India.

MODULE III - NUCLEAR POWER PLANTS**9 Hours**

Nuclear energy - Fission and Fusion reaction - Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors - Boiling Water Reactor , Pressurized Water Reactor -Uranium reactor, Breeder Reactor, Gas Cooled and Liquid Metal Cooled Reactors - Safety measures for Nuclear Power plants - Case study: Comparison of various nuclear power plants in India.

MODULE IV- DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS**9 Hours**

Layout of Diesel power plants and components - Selection of engine – types and applications - Gas Turbine power plant – Classifications - Layout – Merits – fuels – Combined Cycle Power Plants - Integrated Gasified based Combined Cycle systems - Introduction to Energy storage – Case study: Decentralized Power technologies.

MODULE V - POWER PLANT ECONOMICS**9 Hours**

Economics of Power generation - Cost of Electrical Energy, Expression for cost of electrical energy, interest, depreciation - Power tariff - types - Load distribution parameters - Load curve - load duration Curve – Effect of load on power plant design – Load forecasting – Peak load pricing - Comparison of site selection criteria -Relative merits and demerits - Capital and Operating Cost of different power plants.

Total No of Hours: 45

Text Books

1. El-Wakil, “Power Plant Technology”, McGraw-Hill, 1st Edition, 2010.
2. Frederick T. Morse, “Power Plant Engineering”, Affiliated East-West Press Pvt Ltd, 7th Edition, 2008.
3. R. K. Rajput, “Power Plant Engineering”, Laxmi Publications, 4th Edition, 2016.

Reference Books

1. Leonjard L. Grigsby, “Electric Power Generation, Transmission and Distribution”, CRC Press, 3rd Edition, 2012.
2. P.K. Nag, “Power plant Engineering”, Tata McGraw-Hill, 4th Edition, 2017.

Course Outcomes

After completion of the course, the students will be able to

- Relate the various conventional energy systems and factors affecting their site selection.
- Illustrate power generation using steam power plants along with the detailed review on its equipments used.
- Explain about the nuclear energy production, its equipments and reactors model inside the plant.
- Express and compare the construction, working principle of various equipments used with diesel, gas turbine and combined cycle power plants.
- Evaluate economic feasibility and importance of equipment selection to formulate tariff structure for power generating units.

MINOR ELECTIVE SUBJECTS
(MI)

EEMIT-101	Solar Photovoltaic Systems	4L:0T:0P	4 Credits
------------------	-----------------------------------	-----------------	------------------

Course Objectives:

- *To Study the principle of direct solar energy conversion to power using PV technology.*
- *To make the students to analyze the structure, materials and operation of solar cells, PV modules, and arrays.*
- *To train and test to design PV systems for various applications.*
- *To empower them to socio-economic and environmental merits of photovoltaic systems for a variety of applications.*
- *To equip them to prospects of photovoltaic technology for sustainable power generation.*

MODULE I- SOLAR CELL FUNDAMENTALS

9 Hours

Contribution of Solar PV in Global Energy Scenario – Fundamentals of Semiconductors and Solar cells, Energy band, Charge carriers – Motion, PN Junction diode, Solar cells – Design characteristics, Solar radiation.

MODULE II - SOLAR CELL TECHNOLOGIES

9 Hours

Silicon cell – Mono crystalline & Multi crystalline – Production, Silicon – Wafer based Solar cell, Thin film solar cells – A-Si, Cd-Te & CIGS, Concentrated PV cells, Emerging technologies – Organic cells, Dye sensitized cells.

MODULE III - ON-GRID APPLICATIONS

9 Hours

Solar cells to solar array – On-Grid PV system – With & Without storage – Balance of system – DCDC converters – Inverters – Net Metering – Design & analysis – Performance evaluation & monitoring – Field visit – Grid tied PV power plant.

MODULE IV- OFF-GRID APPLICATIONS

9 Hours

Off-Grid stand alone PV system – System sizing – Module & Battery – Storage – Batteries for PV systems – Sun Tracking mechanism – Types of tracking – One-axis, Two-axis – Maximum power point tracking – Design & analysis – Performance evaluation & monitoring – Field visit – Off-grid PV system.

MODULE V- COMMERCIALS FOR SOLAR PV INSTALLATIONS

9 Hours

Cost and manufacturability – Cost modeling – Manufacturing economics – scaling – Pricing – Trends in retail pricing – energy economics – grid tied – stand alone applications

Total No of Hours: 45

Text Books:

1. Chetan Singh Solanki “Solar Photovoltaics Fundamentals, Technologies and applications”, 2nd Edition, Prentice Hall of India, 2012
2. A.K. Mukerjee, Nivedita Thakur “Photovoltaic Systems- Analysis and Design” Prentice Hall of India, 2011
3. Robert Foster Majid Ghassemi, Alma Cota “Solar Energy – Renewable Energy and the Environment”, CRC Press, 2010

Reference Books:

1. James P. Dunlop “Photovoltaic Systems”, Second Edition by American Technical Publishers, 209
2. Eduardo Lorenzo “Solar Electricity: Engineering of Photovoltaic Systems” by PROGENSA, 1994

Course Outcomes:

After completion of the course, the students will be able to

- Describe the physics of photo cells
- Explain the compare various technologies along with their pros & cons.
- To design & analyze on-grid and off-grid PV applications.
- Demonstrate realize cost benefit analysis of PV installations.
- Explain the commercials for solar PV installations.

EEMIT -102	Wind Energy Technology	4L:0T:0P	4 Credits
-------------------	-------------------------------	-----------------	------------------

Course Objectives:

- *To have an adequate knowledge comprehend the fundamentals of wind energy and its conversion system*
- *Elaborate discussion about disseminate with the wind measurement techniques*
- *Detailed study of the concepts of aerodynamics, wind farms and cycles*
- *An exposure is given to the student about analyze the economics of wind energy systems*

MODULE I- WIND CHARACTERISTICS AND RESOURCES**9 Hours**

Characteristics of the Wind Resource- Characteristics of the Atmospheric Boundary Layer-Wind Data Analysis and Resource Estimation-Wind Turbine Energy Production Estimates Using Statistical Techniques-Regional Wind Resource Assessment-Wind Prediction and Forecasting

Wind Measurement and Instrumentation.

MODULE II- AERODYNAMICS OF WIND TURBINES

9 Hours

One-dimensional Momentum Theory and the Betz Limit-Ideal Horizontal Axis Wind Turbine with Wake Rotation-Airfoils and General Concepts of Aerodynamics-Blade Design for Modern Wind Turbines-Performance Prediction-Blade Shape for Optimum Rotor with Wake Rotation Generalized Rotor Design Procedure-Effect of Drag and Blade Number on Optimum Performance Aerodynamics of Horizontal and Vertical Axis Wind Turbines.

MODULE III - MODERN WIND TURBINE CONTROL AND MONITORING SYSTEM

9 Hours

Details of Pitch and Yaw Systems- Protections & Safety Consideration in Wind turbines- Wind Turbine Monitoring- SCADA & Databases: Remote Monitoring and Generation Reports, Operation & Maintenance for Product Life Cycle, Balancing technique (Rotor & Blade).

MODULE IV CONCEPT OF WIND FARMS

9 Hours

Wind Farms - Site Preparation-Installation and Operation Issues - Wind Farms in Electrical Grids Typical Grid-connected Turbine Operation. Environmental concerns: Pollution free power; Noise; birds; Aesthetics, Radio waves, interference, Rainfall

MODULE V- ECONOMICS ANALYSIS

9 Hours

Economic Assessment of Wind Energy Systems- Capital Costs of Wind Energy Systems Operation and Maintenance Costs- Value of Wind Energy- Economic Analysis Methods- Wind Energy Market Considerations

Total No of Hours: 45

Text books:

1. T Burton, et.al, "Wind Energy Handbook", 2nd Edition, John Wiley and Sons, 2011
2. J.F. Manwell, et.al, "Wind Energy Explained", 2nd Edition, John Wiley and Sons, 209
3. D. A. Spera, "Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering", 2nd Edition, ASME Press, 209

Reference books:

1. William W. Peng, "Fundamentals of turbo machinery", John Wiley and Sons, 2008
2. Mukund. R. Patel, "Wind and solar power systems" 2nd Edition, Taylor & Francis, 2006

Course Outcomes:

- Develop the knowledge of theoretical comprehend the fundamentals of wind energy and its conversion system
- Examine various real the wind measurement techniques.
- Summarize the concepts of aerodynamics, wind farms and cycles.
- Analyze the economics of wind energy systems

EEMIT-103	Power Electronics For Renewable Energy Systems	4L:0T:0P	4Credits
------------------	---	-----------------	-----------------

Course Objectives

- *To impart knowledge on conversion techniques and renewable energy technologies.*
- *To study the mechanisms of machines for the conversion of renewable energy sources.*
- *To learn the power converters and its applications in renewable energy systems.*
- *To understand the different conversion mechanisms of wind and solar systems.*
- *To understand the various hybrid systems of renewable energy conversion techniques.*

MODULE I - INTRODUCTION**9 Hours**

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) – Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.

MODULE II- ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION**9 Hours**

Review of reference theory fundamentals-principle of operation and analysis: IG, PMSG, SCIG and DFIG.

MODULE III- POWER CONVERTERS**9 Hours**

Solar: Block diagram of solar photovoltaic system-Principle of operation: line commutated converters (inversion-mode) – Boost and buck-boost converters- selection Of inverter, battery sizing, and array sizing Wind: three phase AC voltage controllers- AC-DC-AC converters: uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters-matrix converters. Power Quality Measurements – Maximum power point tracking (MPPT).

MODULE IV - ANALYSIS OF WIND AND PV SYSTEMS**9 Hours**

Stand-alone operation of fixed and variable speed wind energy conversion systems and solar system
Grid connection Issues –Grid integrated PMSG and SCIG Based WECS Grid Integrated solar system.

MODULE V - HYBRID RENEWABLE ENERGY SYSTEMS**9 Hours**

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind and PV in microgrid.

Total No of Hours : 45**Text Books:**

1. Leon Freris, David Infield, “Renewable energy in power systems”, John Wiley & Sons, 2008.
2. Rashid.M.H “power electronics Handbook”, Academic press, 2007.
3. Rai.G.D, “Non conventional energy sources”, Khanna publishes, 2010.

References Books:

1. Ali Keyhani, Design of Smart Power Grid Renewable Energy Systems, John Wiley & Sons, 2011.
2. Wind Electric Systems: S.N.Bhadra, D.Kastha, OXFORD university press, 2005

Course Outcomes:

After completion of the course, the students will be able to

- Analyze the various conversion techniques in renewable energy technologies.
- Apply the various mechanisms for the conversion of renewable energy sources.
- Evaluate the appropriate power converters for renewable energy systems.
- Examine the different conversion mechanisms for wind and solar systems.
- Interpret the importance of various hybrid renewable energy systems.

EEMIT -104	Energy Storage Technologies	4L:0T:0P	4 Credits
-------------------	------------------------------------	-----------------	------------------

Course Objectives:

- *To understand the significance and need for various types of energy storage technologies.*
- *To identify their uses for real world applications.*
- *To analyze to understand the Green Energy*
- *To analyze to understand the Storage of Hydrogen.*

- *To understand the challenges associated.*

MODULE I - INTRODUCTION TO ENERGY STORAGE

9 Hours

Necessity of Energy Storage – Types of Energy Storage – Thermal, Mechanical, Chemical, Electrochemical and Electrical - Comparison of Energy Storage Technologies.

MODULE II - THERMAL ENERGY STORAGE SYSTEM

9 Hours

Thermal Energy Storage – Types – Sensible, Latent and Thermo-chemical – Sensible Heat Storage - Simple water and rock bed storage system – pressurized water storage system –Stratified System - Latent Heat Storage System - Phase Change Materials – Simple units, packed bed storage units - Other Modern Approaches.

MODULE III - ELECTRICAL ENERGY STORAGE

9 Hours

Batteries - Fundamentals and their Working – Battery performance, Charging and Discharging - Storage Density - Energy Density - Battery Capacity - Specific Energy -Memory Effect - Cycle Life - SOC, DOD, SOL - Internal Resistance - Columbic Efficiency and Safety issues. Battery Types - Primary and Secondary – Lead Acid, Nickel – Cadmium, Zinc Manganese dioxide, Zinc-Air, Nickel hydride, Lithium Ion.

MODULE IV- HYDROGEN ENERGY STORAGE

9 Hours

Hydrogen Storage Options – Physical and Chemical Methods - Compressed Hydrogen –Liquefied Hydrogen – Metal Hydrides, Chemical Storage - Other Novel Methods -comparison - Safety and Management of Hydrogen - Applications - Fuel Cells.

MODULE V- ALTERNATE ENERGY STORAGE TECHNOLOGIES

9 Hours

Flywheel, Super Capacitors - Pumped Hydro Energy Storage System - Compressed Air Energy Storage System, SMES - Concept of Hybrid Storage – Principles, Methods, and Applications - Electric and Hybrid Electric Vehicles.

Total No of Hours: 45

Text Books:

1. Ibrahim Dincer and Mark A. Rosen, “Thermal Energy Storage Systems and Applications”, John Wiley & Sons 2002.

2. James Larminie and Andrew Dicks, “Fuel cell systems Explained”, Wiley publications, 2003.
3. Luisa F. Cabeza, “Advances in Thermal Energy Storage Systems: Methods and Applications”, Elsevier Woodhead Publishing, 2015

Reference Books:

1. Robert Huggins, “Energy Storage: Fundamentals, Materials and Applications”, 2nd edition, Springer, 2015.
2. Ru-shiliu, Leizhang, Xueliang sun, “Electrochemical technologies for energy storage and conversion”, Wiley publications, 2012.

Course Outcomes:

After completion of the course, the students will be able to

- Identify the energy storage technologies for suitable applications.
- Apply the appropriate thermal energy storage methods suitably
- Introduce the concepts, types and working of various batteries.
- Understand the use of Hydrogen as Green Energy for our Future.
- Recognize and choose appropriate methods of Energy Storage and Hybrid Systems.

EEMIT-105	Data Analytics And Forecasting In Energy Systems	4L:0T:0P	4 Credits
------------------	---	-----------------	------------------

Course objectives:

- To familiarize with the fundamental concept of Data Analysis
- To overview the Data Preprocessing Techniques.
- To determine various Data Reduction Techniques.
- To understand about the data reduction techniques.
- To understand the concept of Forecasting model

MODULE I - INTRODUCTION

9 Hours

Introduction to Data Analysis, Understanding the nature of Data, Types of Data, Application using Python Data structures and libraries, Quantitative Data Analysis, Qualitative Data Analysis, Introduction to essential libraries such as NumPy, Pandas, and Scikit-learn- Hands-on exercises on Python libraries.

MODULE II - DATA PREPROCESSING TECHNIQUES

9 Hours

Importance and goals of data preprocessing in machine learning, Steps involved in data

preprocessing pipeline, Different Data Cleaning Techniques: Handling missing data: imputation methods, removal strategies, Outlier detection and treatment techniques, Normalization and Standardization Explanation of normalization and standardization techniques, Application of normalization and standardization in preparing data for modelling, Comparative analysis of the effects of normalization and standardization on model performance.

MODULE III - DATA REDUCTION TECHNIQUES

9 Hours

Data Reduction Techniques: Principle Component Analysis (PCA) for dimensionality reduction, Linear Discriminant Analysis (LDA) for feature extraction, Application scenarios and limitations of data reduction techniques

MODULE IV – DATA VISUALIZATION TECHNIQUES

9 Hours

Configurations of EV - advantages - EV transmission configuration: Transmission components - gear ratio - EV motor sizing - EV market.

MODULE V - FORECASTING MODEL

9 Hours

Qualitative & Quantitative Forecasting Techniques – Regression Analysis – Double Moving Average – Double and Triple Exponential Smoothing – ARIMA model – Delphi technique – Methods for renewable energy forecasting – Application of forecasting to power system management and markets.

Total No of Hours: 45

Text books:

1. George Kariniotakis, “Renewable energy forecasting – From models to applications”, A volume in woodhead publishing series in energy, 2017.
2. William Holderbaum, “Energy Forecasting and Control Methods for Energy Storage Systems in Distribution Networks: Predictive Modelling and Control Techniques”, Springer, 1st Edition, 2023.
3. Jan Kleissl, “Solar Energy Forecasting and Resource Assessment”, Elsevier, 1st Edition, 2013

Reference books:

1. Python Machine Learning, Authors: Sebastian Raschka and Vahid Mirjalili, Publisher: Packt Publishing, ISBN- 13: 978-1789955750, Edition: 3rd Edition
2. Pattern Recognition and Machine Learning, Author: Christopher M. Bishop, Publisher: Springer, ISBN-13: 978-0387310732, Edition: 1st Edition

Course outcomes:

- Summarize the basics Data analysis and its working principle.
- Combine the different Data Preprocessing Techniques.
- Develop the Data Reduction Techniques.
- Review the working of Data Reduction Techniques
- Describe the working of different Forecasting model.

EEMIT -106	AI & MACHINE Learning For Energy Engineering	4L:0T:0P	4 Credits
-------------------	---	-----------------	------------------

Course Objectives:

- To locate soft commanding methodologies, Machine Learning.
- To observe the concepts of Regression and Classification Methods
- To practice the concept of Clustering and Decision Trees.
- To analyze Artificial Neural Network (ANN) Architecture and Applications.

MODULE I - MACHINE LEARNING**9 Hours**

Introduction - Types of Machine Learning, Supervised Learning, Unsupervised Learning, Reinforcement learning, The Curse of dimensionality, Over fitting and under fitting, Linear Regression, Bias and Variance trade off, Testing – cross validation, Regularization, Learning Curve, Classification - Error and noise, Parametric vs. non-parametric models

MODULE II - REGRESSION AND CLASSIFICATION METHODS**9 Hours**

Platform for machine learning, Machine learning python libraries, training data – testing data – validation data, k-fold cross validation Features, Performance metrics, MSE, accuracy, confusion matrix, precision, recall, F- score, Linear Regression with multiple variables, Logistic Regression Ridge Regression, Maximum likelihood estimation (least squares), principal component analysis, Bayesian classifier, Support vector machine, Support vector machine and kernels, Multi class classification, K nearest neighbour classification, K nearest neighbour classification.

MODULE III - CLUSTERING**9 Hours**

Measuring (dis)similarity, Evaluating output of clustering methods, Spectral clustering, Hierarchical clustering, Agglomerative clustering, Divisive clustering, Choosing the number of clusters - Clustering datapoints and features, Bi-clustering, Multi-view clustering, K-Means clustering, K-

medoids clustering, Understanding the concept and architecture of Self-Organizing Maps, Practical application of SOM in energy data analysis- Energy Data Analysis for Clustering: Real-world case studies demonstrating the use of clustering in energy data analysis, Interpretation of clustering results and their implications in energy engineering

MODULE – IV DECISION TREES

9 Hours

Decision tree representation, Basic decision tree learning algorithm, Inductive bias in decision tree, Decision tree construction, Issues in decision tree, Classification and regression trees (CART), Random Forest, Multivariate adaptive regression trees (MART).

MODULE V - ARTIFICIAL NEURAL NETWORK (ANN) ARCHITECTURE AND APPLICATIONS

9 Hours

Basic structure and functioning of artificial neurons, Types of neural network architectures: feedforward, recurrent, convolutional, etc. Techniques to prevent over fitting and under fitting in neural networks, Back propagation Algorithm, Optimization methods: gradient descent, stochastic gradient descent, etc., Applications of ANN in Energy Engineering: Use cases of ANN in radiation prediction, power prediction, energy consumption forecasting, etc. Challenges and considerations in implementing ANN models for energy-related tasks

Text Books:

1. Kevin P. Murphy, —Machine learning: A Probabilistic Perspective, MIT Press, 2012.
2. Ethem Alpaydin, —Introduction to Machine Learning, Prentice Hall of India, 2005
3. Tom Mitchell, "Machine Learning", McGraw-Hill, 1997.

Reference Books:

1. Gavin Hackeling, Machine Learning with scikit-learn, Packet publishing, O'Reily, 2018.

Course Outcomes:

Upon the completion of this course, the student will be able to

- Understand Machine Learning For Energy Engineering
- Understand Regression and Classification Methods.
- Develop Clustering and Decision Trees learning algorithm.
- Develop Artificial Neural Network (ANN) Architecture and Applications.

HONORS

EEHT-101	Distribution System Automation	4L:0T:0P	4 Credits
-----------------	---------------------------------------	-----------------	------------------

Course Objectives:

- *To understand and appreciate the basic control techniques involved in distribution automation*
- *Introduced to the various communication systems involved in distribution automation.*
- *The course is to enable the students capable of analyzing the economics behind the automation of distribution system automation.*

MODULE I - INTRODUCTION

9 Hours

Introduction to Distribution Automation, Control System Interfaces, Control and Data requirements, Centralized (Vs) Decentralized Control, Distribution Automation System, DAS Hardware, DAS Software, DA Capabilities, Automation system computer facilities.

MODULE II - MONITORING AND CONTROL

9 Hours

Layout of substations and feeders - design considerations. Distribution system load flow - optimal siting and sizing of substations - optimal capacitor placement. Distribution system monitoring and control - SCADA, Remote metering and load control strategies - Optimum feeder switching

MODULE III - COMMUNICATION SYSTEMS

9 Hours

DA Communication Requirements - reliability, Cost Effectiveness, Data Rate Requirements, Two Way Capability - outages and faults, Ease of operation and maintenance - Communication Systems used - Distribution line carrier (Power line carrier), Telephone, Cable TV, Radio, AM Broadcast, FM SCA, VHF Radio, UHF Radio etc.

MODULE IV - BENEFIT CATEGORIES

9 Hours

DA Benefit Categories - Capital Deferred Savings - Operation and Maintenance Savings - Interruption Related Savings - Customer-related Savings - Operational savings. Improved operation - Function Benefits.

MODULE V - ECONOMIC IMPACTS

9 Hours

Automation on Distribution Systems, Integration of benefits into economic evaluation. Development and Evaluation of Alternate plans - Operation and Maintenance Cost Evaluation, Evaluation of Alternatives.

Text Books:

1. Momoh A. Momoh, James A. Momoh., 'Electric Power Distribution, Automation, Protection, and Control', CRC Press, 2007.

2. Gonen., 'Electric Power Distribution System Engineering', BSP Books, Pvt. Ltd, 2007.

Reference Books:

1. D. Bassett, K. Clinard, J. Grainger, S. Purucker, and D. Ward, 'Tutorial Course: Distribution Automation', IEEE Tutorial Publication 88EH0280-8-PWR, 1988.

2. IEEE Working Group on 'Distribution Automation'.

Course Outcomes:

- Upon completion of the course the students would be able to
- Understand the Distribution Automation Systems and the Control techniques involved.
- Develop a clear idea on the layout of the substations and feeders and also on the various management techniques viz., load management and voltage management.
- Identify an appropriate method of communication for any particular distribution system with a view of automation.
- Evaluate the economic aspects of any distribution system with automation.

EEHT-102	EHV AC and DC Transmission	4L:0T:0P	4 Credits
----------	----------------------------	----------	-----------

Course Objectives:

- To understand and analyze the HVAC and HVDC transmission systems.
- To plan an appropriate transmission system between two destinations based on the load requirement and anticipated technical performance of power transmission

MODULE I -INTRODUCTION

9 Hours

Design aspects of HVAC – conductor, tower, insulator and substation structure design, mechanical design - sag-tension calculations, design of EHVAC lines based on steady state limits and transient over voltages - design of extra HV cables - XLPE cables and gas insulated cables.

MODULE II - POWER FLOW

9 Hours

Real and reactive power flows in HVAC systems – reactive power compensation, FACTS devices in EHV Transmission, short circuit level & real power transfer capacity. Stability- voltage stability and control. Theory of travelling and stationary waves.

MODULE III - HVDC TRANSMISSION

9 Hours

Introduction to HVDC transmission - Bridge converters – rectifier and inverter operation, equivalent

circuit representation, power reversal, desired features of control and actual control characteristics.

MODULE IV - CONTROLLERS

9 Hours

Basic HVDC controllers, converter faults, commutation failure, bypass action in bridges, protection issues in HVDC - DC reactors, voltage and current oscillations, DC circuit breakers and over voltage protection.

MODULE V - HARMONICS

9 Hours

Harmonics in HVDC - characteristics and uncharacteristic harmonics, troubles due to harmonics, harmonic filters – active and passive filters. Introduction to Hybrid HVDC and Off-shore wind power evacuation schemes.

Text Books:

1. S.Rao, 'EHV-AC, HVDC Transmission and Distribution Engineering', Khanna Publishers, 3rd Edition, 2012.
2. Rakosh Das Begamudre, 'Extra High Voltage AC Transmission Engineering', New Age International Publishers, 3rd Edition, 2009.

Reference Books:

1. Padiyar K.R., 'HVDC Transmission Systems', New Age International Publishers, 2nd Revised Edition, 2012.

Course Outcomes:

Upon completion of the course, the student will be able to

- Distinguish between the usage of EHVAC and HVDC transmission systems.
- Judge when and where to use EHAV / HVDC transmission systems in practice.
- Design implementation circuitry for various controllers used in HVDC transmission systems.
- Plan an appropriate electric power transmission system between two destinations to satisfy the pre-defined load requirement without compromising the technical performance

EEHT-103	Energy Storage Technology	4L:0T:0P	4 Credits
-----------------	----------------------------------	-----------------	------------------

Course Objectives:

- To understand the purpose of energy storage systems.
- To learn the different energy storage techniques.
- To learn about the different types of batteries available for energy storage.
- To impart knowledge regarding on the advanced energy storage systems.

- To learn about the different vehicular energy storage schemes.

MODULE I - INTRODUCTION TO ENERGY STORAGE IN POWER SYSTEMS 9 Hours

Need and role of energy storage systems in power system, General considerations, Energy and power balance in a storage unit, Mathematical model of storage system: modelling of power transformation system (PTS)-Central store (CS) and charge–discharge control system (CDCS), Econometric model of storage system.

MODULE II - OVERVIEW ON ENERGY STORAGE TECHNOLOGIES 9 Hours

Thermal energy: General considerations -Storage media- Containment- Thermal energy storage in a power plant, Potential energy: Pumped hydro-Compressed Air, Kinetic energy: Mechanical- Flywheel, Power to Gas: Hydrogen - Synthetic methane

MODULE III – STORAGE DEVICES 9 Hours

Electrochemical energy : Batteries- Battery parameters: C-rating -SoC- DoD- Specific Energy-Specific power (numerical examples), Fuel cells, Electrostatic energy (Super Capacitors), Electromagnetic energy (Super conducting Magnetic Energy Storage), Comparative analysis, Environmental impacts of different technologies.

MODULE IV - ENERGY STORAGE AND RENEWABLE POWER SOURCES 9 Hours

Types of renewable energy sources: Wave - Wind – Tidal – Hydroelectric - Solar thermal technologies and Photovoltaics, Storage role in isolated power systems with renewable power sources, Storage role in an integrated power system with grid-connected renewable power sources

MODULE V - ENERGY STORAGE APPLICATIONS 9 Hours

Smart grid, Smart microgrid, Smart house, Mobile storage system: Electric vehicles – Grid to Vehicle (G2V)-Vehicle to Grid (V2G), Management and control hierarchy of storage systems - Aggregating energy storage systems and distributed generation (Virtual Power Plant Energy Management with storage systems), Battery SCADA, Hybrid energy storage systems: configurations and applications.

Text Books:

1. A.G.Ter-Gazarian, “Energy Storage for Power Systems”, Second Edition, The Institution of Engineering and Technology (IET) Publication, UK
2. Francisco Díaz-González, Andreas Sumper, Oriol Gomis-Bellmunt,” Energy Storage in Power Systems” Wiley Publication, ISBN: 978-1-118-97130-7, Mar 2016.
3. P. Nezamabadi and G. B. Gharehpetian, "Electrical energy management of virtual power plants in distribution networks with renewable energy resources and energy storage systems”, IEEE Power Distribution Conference, 2011.

Reference Books:

1. Electric Power Research Institute (USA), “Electricity Energy Storage Technology Options: A White Paper Primer on Applications, Costs, and Benefits” (1020676), December 2010.
2. Paul Denholm, Erik Ela, Brendan Kirby and Michael Milligan, “The Role of Energy Storage with Renewable Electricity Generation”, National Renewable Energy Laboratory (NREL) -a National Laboratory of the U.S. Department of Energy.

Course Outcomes:

After the completion of the course the student will be able to

- Identify the role of energy storage in power systems
- Classify thermal, kinetic and potential storage technologies and their applications
- Compare Electrochemical, Electrostatic and Electromagnetic storage technologies
- Illustrate energy storage technology in renewable energy integration
- Summarise energy storage technology applications for smart grids.

EEHT-104	Modern Optimization Techniques For Electric Power Systems	4L:0T:0P	4 Credits
-----------------	--	-----------------	------------------

Course Objectives:

To learn the concepts and techniques of evolutionary and optimization techniques in power system applications.

MODULE I - CLASSIFICATION OF OPTIMIZATION PROBLEMS 9 Hours

Definition- Unconstrained and Constrained Optimization-Optimality Conditions-Classical Optimization techniques (Linear and nonlinear programming, Quadratic programming, Mixed integer programming)-Intelligent Search methods (Optimization neural network, Evolutionary algorithms, Tabu search, Particle swarm optimization, Application of fuzzy set theory).

MODULE II - GENETIC ALGORITHM 9 Hours

Evolution in nature-Fundamentals of Evolutionary Algorithms-Working Principles of Genetic Algorithm- Evolutionary Strategy and Evolutionary Programming-Genetic Operators-Selection, Crossover and Mutation-Issues in GA implementation- GA based Economic Dispatch Solution- Fuzzy Economic Dispatch including losses- Tabu search algorithm for unit commitment problem- GA for unit commitment-GA based Optimal power flow- GA based state estimation.

MODULE III - PSO 9 Hours

Fundamental principle - Velocity Updating - Advanced operators - Parameter selection - Hybrid approaches (Hybrid of GA and PSO, Hybrid of EP and PSO) -Binary, discrete and combinatorial PSO-Implementation issues - Convergence issues - PSO based OPF problem and unit commitment- PSO for reactive power and voltage control-PSO for power system reliability and security.

MODULE IV - OPTIMIZATION ALGORITHM

9 Hours

Simulated annealing algorithm- Tabu search algorithm - SA and TS for unit commitment - Ant colony optimization - Bacteria Foraging optimization.

MODULE V - PARETO OPTIMALITY

9 Hours

Concept of pareto optimality - Conventional approaches for MOOP - Multi objective GA - Fitness assignment - Sharing function - Economic Emission dispatch using MOGA – Multi objective PSO (Dynamic neighborhood PSO, Vector evaluated PSO) – Multi objective OPF problem.

Text Books:

1. Soliman Abdel Hady, Abdel Aal Hassan Mantawy, “Modern Optimization Techniques with Applications in Electric Power Systems”, Springer, 2012.
2. D.P.Kothari and J.S.Dhillon, “Power System Optimization”, 2nd Edition, PHI Learning Private Limited, 2010.

Reference Books:

1. Kalyanmoy Deb, “Multi Objective Optimization using Evolutionary Algorithms”, Wiley India Pvt ltd, 2010.
2. Kalyanmoy Deb, “Optimization for Engineering Design”, Prentice Hall of India, 2nd Edition, 2012.

Course Outcomes:

Upon completion of this course the students will be able to

- Understand the concept of optimization techniques.
- Apply evolutionary algorithms for unit commitment and economic dispatch problems.
- Interpret hybrid approach for power system reliability and security.

EEHT-105	Vehicular Electric Power Systems	4L:0T:0P	4 Credits
-----------------	---	-----------------	------------------

Course Objectives:

- *This course introduces the fundamental concepts, principles and analysis of hybrid and electric vehicles.*

MODULE I – HISTORY

9 Hours

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance, Capabilities, Automation system computer facilities.

MODULE II - ELECTRIC COMPONENTS

9 Hours

Introduction to electric components used in hybrid and electric vehicles- Configuration and control of DC Motor drives, Induction Motor drives, Permanent Magnet Motor drives, and Switched Reluctance Motor drives- drive system efficiency.

MODULE III - STORAGE TECHNOLOGIES

9 Hours

Energy storage technologies in hybrid vehicles-flywheel, hydraulic, fuel cell and hybrid fuel cell energy storage system-ultra capacitors- comparison- battery charging control.

MODULE IV - ENERGY MANAGEMENT STRATEGIES

9 Hours

Introduction to energy management strategies used in hybrid and electric vehicle, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy strategies.

MODULE V - APPLICATIONS

9 Hours

Electrical power system in air craft, sea and undersea vehicles, space vehicles-hybrid vehicle control strategies-supporting subsystem.

Total No Of Hours:45

Course Outcomes:

On completion of the course, the student would be able to

- Understand the various aspects of hybrid and electric vehicles.
- Plan the selection of electrical machines for hybrid and electric vehicles.
- Select various energy storage technologies for hybrid and electric vehicles.
- Implement energy management techniques for hybrid and electric vehicles.
- Demonstrate the power system of various vehicular systems.

Text Books:

1. Ali Emadi, Mehrdad Ehsani, John M. Miller, 'Vehicular Electric Power Systems: Land, Sea, Air, and Space Vehicles', CRC Press, 2003.
2. Sandeep Dhameja, 'Electric Vehicle Battery Systems', Newnes, 2002.
3. Chris Mi, M. Abul Masrur, David Wenzhong Gao, 'Hybrid Electric Vehicles: Principles and Applications with Practical Perspectives', Wiley, 2011.

Reference Books:

1. Ion Boldea and S.A Nasar, 'Electric drives', CRC Press, 2005.
2. Iqbal Husain, 'Electric and Hybrid Vehicles: Design Fundamentals', CRC Press, 2nd Edition, 2010.

EEHT-106	Energy Efficient Buildings And Systems	4L:0T:0P	4 Credits
----------	--	----------	-----------

Course Objectives

- *The concepts and techniques of energy efficient buildings and solar house design features.*
- *The concepts and techniques of solar passive heating and cooling systems.*
- *The concepts and techniques of day lighting and electrical lighting, heat control of buildings.*
- *The design concepts of energy efficient buildings.*

MODULE I - ENERGY TRANSFER IN BUILDINGS**9 Hours**

Concepts of energy efficient buildings and energy efficient HVAC systems. Calculation of heating and cooling loads of the building. Building's energy balance accounting for solar energy gain – Heat losses - Internal heat sources. Study of climate and its influence in building design for energy requirement. Low energy and zero energy buildings.

UNIT II - PASSIVE SOLAR HEATING AND COOLING**9 Hours**

General principles of passive solar heating – Key design elements - Direct solar heat gain from walls, water walls, convective air loops, concepts and case studies. General principles of passive cooling, ventilation, predicting ventilation in buildings, window ventilation calculations. Reradiation – Evaporative cooling, mass effect, thermal insulation, load control, air filtration, odor

removal and heat recovery in large buildings.

UNIT III – DAY LIGHTING AND ELECTRICAL LIGHTING 9 Hours

Materials, components and details - Insulation – Optical materials – Radiant barriers. Glazing materials – Day lighting – Sources and concepts – Building design Strategies – Case studies – Electric lighting, light distribution, electric lighting control for day lighted buildings and illumination requirement – Components of daylight factor – Recommended daylight factors and day lighting analysis.

UNIT IV - HEAT CONTROL AND VENTILATION 9 Hours

Requirements – Heat transmission through building sections – Thermal performance of building sections – Orientation of buildings – Building characteristics for various climates – Thermal design of buildings influence of design parameters – Mechanical controls. Ventilation – Requirements – Minimum standards for ventilation – Ventilation Design – Energy conservation in ventilating systems – Design for natural ventilation.

UNIT V - GREEN BUILDINGS 9 Hours

Green building features - Green materials, integrated ecological design, sustainable site and landscaping enhancing ecosystems, indoor environment quality, microclimate, day lighting, water and waste management. Costs and benefits relevance to LEED / IGBC standards - High-performance green buildings - Economics, managing initial costs and environment benefits. International green globes building assessment system.

Course Outcomes:

On completion of the course, the student would be able to

- Understand the various aspects energy transfer in buildings.
- Plan the selection of Passive solar heating and cooling.
- Select various Day Lighting and Electrical Lighting
- Implement heat control and ventilation.
- Demonstrate the Energy efficient buildings and systems green buildings

Text Books:

1. Means .R.S, “*Green Building: Project Planning and Cost Estimating*”, Kingston, 2006.
2. Kibert .C.J. “*Sustainable Construction: Green Building Design*”, 2nd edition, Wiley, 2007.
3. Boecker .J, “*Integrative Design Guide to Green Building*”, Wiley, 2009.

Reference Books:
