

BEST PRACTICE 1

Initiatives to Achieve Sustainability Development Goals (SDG)

HEIs are vital in fostering sustainability and advancing SDGs. We lead by example through campus-wide sustainability practices, embracing eco-friendly infrastructure, energy efficiency and waste reduction.

We empower students through engagement programs, participation in sustainability projects and campaigns. Collaborating with local communities and forging partnerships with external stakeholders addresses sustainability needs beyond the campus.

Institutional governance has prioritized sustainability and is reflected in policies. We commit to carbon neutrality, focusing on emission reduction and renewable energy adoption. Cultural change is facilitated through awareness campaigns, fostering a collective sense of responsibility.

BEST PRACTICE 2

Excellence through activities of Professional Bodies

Professional bodies, such as IET, IEEE, IETRAE, CSI, NIQR, MMA, SAEISS, etc., are instrumental in cultivating excellence.

These organizations serve for knowledge sharing and networking through conferences, seminars and workshops. Skill development is achieved through training programs, certifications, and workshops that enhance professionals' competencies. Funding for activities through these bodies contribute to technological advancements. They bridge the gap between theory and practical's, producing graduates ready for the workforce. Recognition and awards through this bodies motivate us to strive for continuous improvement. Publications through professional bodies help to share research findings.
